Hello,

I live in the Sylvan Greens development adjacent to the subject property.

I would like to know how the city is going to mitigate the increased traffic on El Camino, especially, the cars traveling west to the northbound ramp to 85 and cars going north on Sylvan to 237. The distance between Sylvan and the ramp to 85 is short and cars backup on El Camino during commute hours. I foresee increased traffic going north on Sylvan making exiting from Tami Way dangerous. Is there a plan to make the intersection of Tami, Sullivan and Sylvan a four-way stop? That would help slow down the traffic on Sylvan as well.

Thank you for your attention.
