Subject: Agenda item 5.1.6

Hi,

I'm interested in getting more information about the environment study done when recommending mixed-use development for the Grant-Phyllis shopping center. There is a gas station on that property and I'm wondering if that affects the types of residential units that can be developed. Also were there previous tenants that used chemicals such as a dry cleaner on that site which could have an impact on residential units? Finally, where will the proposed residential units get water given that we are in a severe drought. Either we have enough water for more residents or we are in a severe drought and that is why we are being asked to conserve water.

Sincerely,

Carla Mott
