Subject: Fall 2024 North Bayshore District Transportation Monitoring Summary

SJ24-2319

This memorandum reports the results of the Fall 2024 North Bayshore (NBS) District Transportation Monitoring. Since February of 2014, the City of Mountain View has collected data on vehicle and person trips entering the North Bayshore District to evaluate gateway volume performance and mode share. Most employers in the district have adopted a hybrid work schedule after the COVID-19 pandemic.

Key Findings

Below is a summary of the key findings of monitoring activities that took place between September 15th and October 28th, 2024.

- **Fall 2024 Observation Conditions:** The Fall 2024 gateway observations are similar to Spring 2024. However, Fall 2024 conditions continue to be different from typical pre-pandemic conditions, in that employees are still working under hybrid schedules indicating many are not coming to North Bayshore every weekday. The observed travel behavior includes a high proportion of employees not coming to the workplace regularly and a higher-than-typical drive-alone percentage for those employees who are coming to the workplace.
- **Gateway Trip Cap Monitoring:** Each of the three gateways are below their peak period vehicle trip cap during both the morning and evening periods. Shoreline Boulevard and Rengstorff Avenue gateways combined have a remaining capacity of 34% during the morning peak period and the evening peak period (i.e., in compliance with the gateway trip cap policy).

- **Morning Peak Period and Peak Hour:** The morning vehicle 3-hour peak period is from 7:45 to 10:45 AM, with the peak hour occurring from 8:30 to 9:30 AM.
- **Evening Peak Period and Peak Hour:** The evening vehicle 3-hour peak period is from 3:15 to 6:15 PM, with the peak hour occurring from 4:45 to 5:45 PM.
- **Morning Combined Gateway Mode Share:** In the morning peak hour, people enter North Bayshore using the following modes: 64% in single-occupant vehicles (SOVs), 16% in shared-ride vehicles, 16% on transit, 3% biking, and 1% walking. The morning inbound peak hour SOV mode share has varied since monitoring began, from as low as 49% in the Fall of 2017 to as high as 70% in Fall of 2021.
- **Evening Combined Gateway Mode Share:** In the evening peak hour, people exit North Bayshore using the following modes: 66% in SOV, 20% in shared-ride vehicles, 10% on transit, 3% biking, and 1% walking.
- **Most Used Gateways in the Morning:** Shoreline Boulevard and Rengstorff Avenue are the most heavily used gateways into the North Bayshore District; between them, they accommodate 82% of the vehicles that enter the district in the morning.
- **Least Used Gateway in the Morning:** The San Antonio Road Gateway is the most lightly used in the morning.
- **Most Used Gateway in the Evening:** Shoreline Boulevard carries the most traffic during the evening peak hour and 3-hour peak period, followed by Rengstorff Avenue. Around 82% of the vehicles use Rengstorff Avenue and Shoreline Boulevard to exit the North Bayshore area in the afternoon.
- **Most Used Gateways by Transit Vehicles:** The Rengstorff Avenue and San Antonio Road Gateways serve around 82% of all transit riders in the AM and around 84% in the PM peak period.

Definition of Gateway Vehicle Capacity

The physical vehicle capacity of the three main gateways (San Antonio Road, Rengstorff Avenue, and Shoreline Boulevard) represents the number of vehicles that can be served during the peak morning and evening periods while maintaining reasonable freedom of vehicular movement (i.e., avoiding gridlock conditions). To establish the 2014 North Bayshore Precise Plan (NBPP) vehicle trip targets, a traffic operations analysis was conducted (*North Bayshore Precise Plan EIR – Establishing Vehicle Gateway Capacity and Sensitivity Tests on Accommodating New Growth*, Fehr & Peers, July 2014), assuming the completion of the land uses envisioned in the 2014 NBPP. Because the 2017 NBPP envisioned a different set of land uses, with the inclusion of nearly 10,000 residential dwelling units, an updated gateway capacity analysis was conducted (*North Bayshore Precise Plan EIR – Vehicle Gateway Capacity with Residential*, Fehr & Peers, December 2016).

Gateway Trip Targets

The NBPP Trip Cap Policy is expressed as an absolute number of vehicles and was updated following Council's approval of the 2021 Circulation Study's recommendation to modify the gateway trip capacity targets. The NBS vehicle trip targets (also sometimes referred to as trip caps) have been historically set based on three key factors: time period, direction, and location.

- **Time period:** The most common time periods for traffic analysis are a single peak hour or a three-hour peak period. In general, a trip target set for a single peak hour will be more restrictive than one set for a peak period. In the North Bayshore area, congested conditions typically last for multiple hours in both the morning and the evening.
- **Direction:** Targets can be set for a single direction of travel, or for both directions combined. A peak direction (e.g., inbound in the morning) vehicle trip target is simple to understand; however, that trip target would need periodic adjustment as different types of land uses (namely, residential) are added to NBS, because the physical capacity of one direction of travel may change depending on how much travel occurs in the other direction.
- **Location:** Trip targets can be set for each gateway individually, or for combinations of two or three gateways. A target set for each gateway individually would be more restrictive than one set for a combination of locations. A combined gateway trip target would imply that the NBS gateways operate as a system, such that as one gateway reaches capacity traffic will shift to other gateways.

Initially, the 2014 NBPP vehicle trip target policy focused only on the inbound direction of travel during the morning 3-hour peak period for each gateway individually (e.g., San Antonio, Rengstorff, and Shoreline). The 2017 NBPP modified that policy and established vehicle trip targets for each gateway individually, based on two-way volumes (i.e., both directions of travel combined), for the morning peak hour and the evening peak hour. Per the recommendations of the *2021 North Bayshore Circulation Feasibility Study* (2021 Circulation Study), City staff are now working to amend the 2017 NBPP to modify the trip targets as gateway transportation improvements are constructed. The 2021 Circulation Study also recommended changing the vehicle trip target to a directional inbound morning 3-hour peak period and outbound evening 3-hour peak period for Shoreline Boulevard and Rengstorff Avenue combined. These targets reflect the existing transportation network. The 2021 Circulation Study does not propose any changes to the San Antonio gateway trip target and recommends measuring the San Antonio gateway separately.

The numeric policy target for Shoreline Boulevard and Rengstorff Avenue combined (from 2021 Circulation Study) and the trip cap target for San Antonio Road (from 2014 NBPP) are presented in **Table 1**.

Observed Gateway Vehicle Volumes

As part of the Fall 2024 traffic monitoring, daily traffic counts at ten roadway locations throughout North Bayshore (including the gateways) were collected from Monday to Friday between September 15th and September 28th, 2024 (refer to Attachment A for the counts and count location). Due to construction and street sweeping, data collection was disrupted at the following locations and dates. Additional days of counts were collected from September 29th to October 28th to compensate for the disrupted data:

- Northbound and Southbound San Antonio Road between Bayshore Parkway and Casey Avenue - September 19th to September 20th
- Westbound La Avenida between Shoreline Boulevard and Inigo Way – September 30th

Some of the data collection dates overlapped with concert dates at Shoreline Amphitheatre, located within the district. For the following dates, higher than average inbound traffic volumes were observed during the evening peak period, but the outbound evening peak period volumes remained similar to those of normal days:

- Saturday, September 21st
- Friday, September 27th
- Friday, October 25th

The morning and evening peak hour and 3-hour peak period vehicle volumes of the North Bayshore gateways are presented below in **Table 2**. The reported gateway volumes are the average of the six mid-weekday (Tuesday to Thursday) counts. **Attachment B** shows the gateway hourly vehicle totals average by direction.

The volume reported in the monitoring is an average of a multi-day observation in **Table 2**. We report the average because there is some natural day-to-day variation in traffic volumes. The detailed summary of the minimum and maximum volumes by direction for each gateway is presented in **Attachment C**, which also includes the range of the variation, expressed as a percentage of the minimum and maximum volumes from the average traffic volumes during morning and evening peak hours and 3-hour peak periods.

In the morning peak hour, the two-way day-to-day variation is +/- 10 percent at the San Antonio gateway, while the two-way day-to-day variation is +/- 5 percent at the Rengstorff and the Shoreline gateways. The combined gateways day-to-day variation is +/- 5 percent during the morning peak hour. In the evening peak hour, the two-way day-to-day variation is +/- 10 percent at the San Antonio and the Rengstorff gateways, while the two-way day-to-day variation is +/- 5 percent at the Shoreline gateway. The combined gateways day-to-day variation is +/- 5 percent during the evening peak hour.

The combined gateways day-to-day variation is +/- 5 percent during both the morning and the evening peak periods. To put these observations in context, a general rule-of-thumb is that the observed traffic volume on a given street segment can vary by +/- 10 percent from one day to the next. The fact that the observed variations are similar to this rule-of-thumb is an indication that the vehicle volumes are not close to the gateway capacity and day-to-day variation is reflective of travel preferences of drivers.

Gateway Trip Target Evaluation

This section compares the Fall 2024 volumes to the 2021 Circulation Study directional trip targets, and **Table 3** presents the results for the morning and evening peak period, which is the focus of the 2021 Circulation Study.

- Source: Fehr & Peers, 2024.

From **Table 3**, the comparison shows that, both for the individual gateways and for the combined gateways, the volume is less than the trip target during all peak periods. For the recommended North Bayshore Trip Cap Policy at Shoreline Boulevard and Rengstorff Avenue combined, the vehicle volume is less than the trip target during both peak periods and in compliance with the North Bayshore Trip Cap Policy.

Historic Gateway Volume Trend

The trip cap monitoring volumes at the gateways has been reported as the mid-week workday averages (Tuesday to Thursday), because both Mondays and Fridays tend to experience different commute patterns than the mid-week workdays. To show the degree of variation, the Tuesday-to-Thursday average has been compared to Monday-to-Thursday and Monday-to-Friday averages over the past five years.

The historic volume summary covers:

- **Table 4** is the morning peak hour inbound vehicle volumes
- **Table 5** is the evening peak hour outbound vehicle volumes
- **Table 6** is the morning peak period inbound vehicle volumes
- **Table 7** is the evening peak period outbound vehicle volumes
- **Table 8** is the daily two-way vehicle volumes

Attachment D includes figures showing the historic trend of the vehicle volumes for each average method.

For all the time periods reported, Tuesday-to-Thursday averages are the highest for each gateway and for the combined gateway total across all years. Monday-to-Friday averages are generally the lowest.

The difference among the three averaging methods was relatively minor in the years before COVID-19 (from Fall 2017 to Spring 2020) as overall vehicle demand was consistently high on all weekdays and vehicle demand was similar to the gateway capacity during some time periods. The percentage differences for peak hour, peak period, and daily between the averaging methods are within 5% before COVID-19. The two monitoring periods (Fall 2021 and Spring 2022) have slightly higher variability, but most percentage differences are within 5%.

Starting Fall 2022, there has been noticeably greater variability between the three averaging methods, reflecting a pattern where there are much lower vehicle volumes on Mondays and Fridays than on the three mid-week days. This is likely a reflection of the "hybrid" work pattern in which employees are more likely to work from home on Mondays and/or Fridays than on mid-week days.

The overall total gateway volumes remain lower than the typical pre-COVID values, although volumes are similar to the Spring 2024 observations. Compared to Spring 2024, Fall 2024 total volumes are 2% lower for Tuesday to Thursday average morning inbound peak hour and remained unchanged during evening outbound peak hour. During peak periods, morning inbound volumes remained the same, and evening outbound volumes reduced by 1%. **Table 9** shows the comparison between Spring 2024 and Fall 2024 volumes.

Mode Share

To get to and from the North Bayshore area, people can choose to drive alone, carpool, take transit, bike, or walk. To enhance non-drive-alone choices, employers in North Bayshore have been using transportation demand management (TDM) programs that offer transit passes, employee shuttles, active transportation (bicycling and walking) incentives, carpool/vanpool incentives, and other methods to reduce daily commute stress on their employees and to reduce the number of SOV trips. The City has set a person mode share target of no more than 45% SOV (of all person trips) usage at the North Bayshore gateways. Below is a summary of the mode share for travel across all gateways combined and at each individual gateway. Since Fall 2023

monitoring period, three additional days of bike and pedestrian counts have been collected to better understand the active transportation patterns. The mode share analysis below does not include transportation network company (TNC) (e.g., Uber, Lyft, etc.) drivers. **Attachment E** summarizes the mode share without and with TNC drivers.

Peak Hour Mode Share

This section describes the vehicle and person mode share for all gateways combined and each gateway separately, for the morning peak hour (8:30 AM to 9:30 AM) and the evening peak hour (4:45 PM to 5:45 PM).

Table 10: Existing Morning Inbound Peak Hour Mode Share for Vehicles and Persons, All Gateways Combined

Mode	Vehicle Percentage	Person Percentage (excludes TNC drivers)	Vehicle Volume	Person Volume (excludes TNC drivers)
SOV ¹	83%	64%	4,270	4,230
HOV ¹	9%	16%	472	1,041
Transit	3%	16%	157	1,053
Bike	4%	3%	183	183
Ped	1%	1%	66	66
Total	100%	100%	5,148	6,573

Notes:

1. Transportation network companies (TNC) (e.g., Uber, Lyft, etc.) were observed by vehicle occupancy (1 person, 2 persons, 3 persons, and 4+persons). The driver was not considered a part of the person volume; therefore, TNC1 = 0 persons per vehicle; TNC2 = 1 person per vehicle; TNC3 = 2 person per vehicle; and TNC 4 = 3 persons per vehicle. TNC1 and TNC2 are treated as SOV in the vehicle and person volume summary.

Source: Fehr & Peers, 2024.

As shown in **Table 10**, most vehicles (83%) entering North Bayshore during the morning peak hour are SOVs; these vehicles transport 64% of people who enter the area. An additional 16% of people arrive using carpools, 16% of commuters use public transit and shuttles (which make up only 3% of the total number of vehicles entering the area), 3% of commuters bike, and 1% walk.

As shown in **Table 11**, the evening outbound direction of travel has similar mode share characteristics as the morning inbound direction. The total number of vehicles and people is slightly lower than the morning peak hour. The share of travel using each mode is similar between the morning and evening; the primary difference being that during the evening peak hour, more people use HOVs and SOVs, and fewer people use public transit. The evening commute period is more spread-out, and the peak vehicle traffic hour starts at 4:45 PM, which is an hour later than the peak transit ridership hour at 3:45 PM.

Each gateway has a different mix of users during the morning peak hour. **Table 12** and **Table 13** show the proportion of total inbound commuters who use each gateway. Shoreline and Rengstorff gateways serve the highest number of people during the morning peak hour (82%) – mostly persons in SOVs, HOVs, and public transit. Most active mode users enter North Bayshore area via one of the major trails. During the morning peak hour, the Rengstorff Avenue and San Antonio Road Gateways serve approximately 75% of all transit riders.

Table 14 and **Table 15** show the proportion of total outbound commuters who use each gateway during the evening peak hour. Similar to the morning peak hour, Shoreline Boulevard and Rengstorff Avenue carry the majority of exiting travelers, with fewer people using San Antonio Road. During the evening peak hour, the modal patterns of usage are relatively similar to the morning. Shoreline Boulevard carries a higher share of SOV but slightly lower share of HOV and transit riders during the evening compared to the morning. Most of the transit riders exit via

Rengstorff Avenue or San Antonio Road; together those two gateways carry 84% of outbound transit riders, while Shoreline Boulevard carries the remaining 16%.

The day-to-day variations for bike volumes is +/- 5 percent, while the day-to-day variation for pedestrian volumes in the morning peak period is +/- 10 percent. In the evening peak period, day-to-day variation for both bike and pedestrian volumes is +/-5 percent.

3-Hour Peak Period Mode Share

The same type of mode share analysis was conducted for the morning and evening 3-hour peak period. The results are presented in **Table 16** to **Table 21**.

- During the morning and evening peak periods, Shoreline Boulevard and Rengstorff Avenue carry the majority of SOV vehicles. Shoreline Avenue serves the highest number of HOV vehicles in the morning and the evening peak periods.
- During the morning and evening peak periods, the Rengstorff Avenue and San Antonio Road Gateways serve approximately 82% to 84% of all transit riders.
- Between the morning and evening peak periods, the transit mode share percentages remain the same at 13%. In comparison, the transit mode shares percentages of the peak hours differ by about 6 percentage points (16% in the morning and 10% evening).

1. Transportation network companies (TNC) (e.g., Uber, Lyft, etc.) were observed by vehicle occupancy (1 person, 2 persons, 3 persons, and 4+persons). The driver was not considered a part of the person volume; therefore, TNC1 = 0 persons per vehicle; TNC2 = 1 person per vehicle; TNC3 = 2 person per vehicle; and TNC 4 = 3 persons per vehicle. TNC1 and TNC2 are treated as SOV in the vehicle and person volume summary.

Figure 1 shows the daily count locations, which are listed below:

1. San Antonio Road between Bayshore Parkway and Casey Avenue (before any driveways on San Antonio. We want to include vehicles turning into the driveways just north of Bayshore Parkway).
2. On Bayshore Parkway, east of the San Antonio Road / Bayshore Parkway intersection. Count should be located north-west of the first driveway on Bayshore Parkway (between intersection and first driveway).
3. Rengstorff Avenue between US 101 Northbound Ramps and Garcia Avenue-Charleston Road
4. Shoreline Boulevard between US 101 Northbound Ramps-La Avenida and Pear Avenue (tubes should be located north of the US-101 NB on-ramps, and south of any driveways)
5. La Avenida between Shoreline Boulevard and Inigo Way (tubes should be located west of any driveways)

The additional shared-use path locations include:

9. Permanente Creek Trail between Old Middlefield Way and Charleston Road (tube should be located just north of US-101, before anyone can get off the trail)
10. Stevens Creek Trail between Moffett Boulevard and La Avenida (tube should be located just north of US-101, before anyone can get off the trail)

Due to the concert impacts, some count dates experienced higher gateway volumes than average. The concert days during the monitoring period were:

- Saturday, September 21st
- Friday, September 27th
- Friday, October 25th

*Transportation network companies (TNC) (e.g., Uber, Lyft, etc.) were observed by vehicle occupancy (1 person, 2 persons, 3 persons, and 4+persons). The driver was not considered a part of the person volume; therefore, TNC1 = 0 persons per vehicle; TNC2 = 1 person per vehicle; TNC3 = 2 persons per vehicle; and TNC4 = 3 persons per vehicle.

^{**} Transportation network companies (TNC) (e.g., Uber, Lyft, etc.) were observed by vehicle occupancy

(1 person, 2 persons, 3 persons, and 4+persons). One-person (i.e., driver only) and two-person TNC vehicles were included as single occupancy vehicles (SOV), while TNC vehicles with three or more persons were included as multi-occupant vehicles (MOV).

high occupancy vehicles (HOV). The driver was considered a part of the person volume and an average vehicle occupancy for morning peak period and evening peak period was applied to the sum of HOV, TNC2, TNC3, and

TNC4. This table shows TNC2 = 2 persons per vehicle;

TNC3 = 3 person per vehicle; TNC4 = 4 persons per vehicle; and the HOV person volume is the remainder of the person volume to achieve the average vehicle occupancy for HOV plus HOV TNCs.
