Council and Staff,

Thank you very much for allocating funds to improving the quality and longevity of our pavement. I frequently travel on many of the streets mentioned. I travel by bicycle and by walking. Often, the bike lane and crosswalk markings are absent. I see the following in the council report:

Additionally, the remaining design scope includes area-specific dig-out repairs, adjustments to utilities and monuments as necessary, and refreshing existing high-visibility crosswalks, pavement markings, and striping at various locations.

That makes me extremely happy! Would it be possible to ask/amend for the following?

1. Where high-visibility crosswalks are missing, add them.
2. Where bike lanes markings are missing, add them.
3. Where green paint on bike lanes is missing, add them.

If we are refreshing paint on these roads, it might be a convenient opportunity to add markings where they are currently not present. This way we can make the streets more complete for *all* users of the road.
