

Attachment 1

Excerpts from

2017 North Bayshore Precise Plan

Environmental Impact Report Traffic Analysis Data

July 2017

- Int. 16. Rengstorff Avenue and Leghorn Street (Mountain View): The addition of project traffic would degrade intersection operations from acceptable LOS C to unacceptable LOS F during the PM peak hour.
- Int. 17. Rengstorff Avenue and Old Middlefield Way (Mountain View): The addition of project traffic would degrade intersection operations from acceptable LOS D to unacceptable LOS F during the PM peak hour.
- Int. 20. Rengstorff Avenue and Central Expressway (Santa Clara County): The addition of project traffic would exacerbate unacceptable intersection operations during the PM peak hour.
- Int. 24. Springer Road-Magdalena Avenue and Foothill Expressway (Santa Clara County): The addition of project traffic would exacerbate unacceptable intersection operations during the AM peak hour.
- Int. 32. Shoreline Boulevard and Space Park Way (Mountain View): The addition of project traffic would exacerbate unacceptable intersection operations during the AM peak hour, and would degrade intersection operations from acceptable LOS D to unacceptable LOS F during the PM peak hour.
- Int. 33. Shoreline Boulevard and Plymouth Street (Mountain View): The addition of project traffic would exacerbate unacceptable intersection operations during the AM and PM peak hours.
- Int. 34. Shoreline Boulevard and Pear Avenue (Mountain View): The addition of project traffic would degrade intersection operations from acceptable LOS D to unacceptable LOS F during the AM and PM peak hours.
- Int. 35. Shoreline Boulevard and La Avenida-US 101 Northbound Ramps (Mountain View): The addition of project traffic would exacerbate unacceptable intersection operations during the AM and PM peak hours.
- Int. 38. Shoreline Boulevard and Middlefield Road (Mountain View): The addition of project traffic would degrade intersection operations from acceptable LOS D to unacceptable LOS F during the AM peak hour, and would exacerbate unacceptable intersection operations during the PM peak hour.
- Int. 49. Moffett Boulevard-Castro Street and Central Expressway (Santa Clara County): The addition of project traffic would degrade intersection operations from acceptable LOS D to unacceptable LOS F during the AM peak hour, and would degrade intersection operations from acceptable LOS E to unacceptable LOS F during the PM peak hour.
- Int. 57. Bayfront Expressway and University Avenue (Menlo Park): The addition of project traffic would exacerbate unacceptable intersection operations during the PM peak hour.
- Int. 59. Donohoe Street and University Avenue (East Palo Alto): The addition of project traffic would exacerbate unacceptable intersection operations during the AM peak hour.

TABLE 13: EXISTING WITH PROJECT MITIGATION SUMMARY

Impacted Intersection ¹		Mitigation Measure	Peak Hour	Existing with Project Conditions				Summary of Draft CEQA Determination	
				Without Mitigation		With Mitigation			
				Delay	LOS	Delay	LOS		
34	Shoreline Blvd and Pear Ave (MV)	Partial Mitigation – Limited Access from Shoreline Boulevard at Pear Avenue: Modify the northbound approach with three northbound through lanes and a separate right-turn lane with 300 foot storage pocket. Restripe the eastbound approach as a left turn, through lane, and two right turn lanes with a no-right-turn on red condition and the westbound approach as a left turn lane and one shared through-right lane with east/west split phasing.	AM PM	>120 >120	F F	32.2 109.9	C F	SU	
35	Shoreline Blvd and La Avenida-US 101 NB Ramps (MV)	Partial Mitigation – Realign US 101 off-ramp with La Avenida to create a T-intersection.	AM PM	>120 >120	F F	23.2 112.9	C F	SU	
38	Shoreline Blvd and Middlefield Rd (MV)	Partial Mitigation – Add an additional left turn lane for eastbound and westbound movements.	AM PM	72.5 104.5	E F	50.3 104.5	D F	SU	
North Bayshore Precise Plan Intersections									
12	Salado Dr and Garcia Ave (MV)	Signalize intersection.	AM PM	20.9 72.7	C A	18.2 21.5	B- C+	LTS	
72	New North-South Local Street / Shorebird Wy (MV)	Signalize the intersection. Each approach would have a left turn lane with protected left-turn phasing and a shared through-right turn lane.	AM PM	32.0 >120	D F	22.1 23.7	C C	LTS	
73	New North-South Local Street / Space Park Wy (MV)	Signalize the intersection. Each approach would have a left turn lane with protected left-turn phasing and a shared through-right turn lane.	AM PM	19.7 >120	C F	21.9 28.4	C C	LTS	
75	Inigo Wy / La Avenida (MV)	Signalize the intersection with east/west split phasing.	AM PM	23.6 40.1	C E	18.5 30.8	B C	LTS	

The realignment of the US 101 northbound off-ramp would increase traffic on the new north/south street; this increase in traffic would require signalization of the new north/south local street intersections at Shorebird Way and Space Park Way. The new north/south local street and Charleston Road would also operate unacceptably during the evening peak hour (see **Appendix L**). Although the peak hour signal warrant is not currently met, it would be possible to improve the intersection operations either by signalizing the intersection or by constructing a single-lane roundabout. The determination of which type of improvement would be most appropriate depends in part on the decision about whether to construct a new crossing of Stevens Creek at the end of Charleston Road.

Realignment of the US 101 northbound off-ramp would require coordination with Caltrans. Since it cannot be assumed Caltrans would approve this mitigation measure and the City cannot solely guarantee its implementation, this impact is designated as **significant and unavoidable**. However, the City should diligently pursue measures to fully mitigate this impact.

Shoreline Boulevard and Middlefield Road (Int. #38, Mountain View): Converting the westbound and eastbound approaches to include two left turn lanes, a through lane, and a shared through-right turn lane and signal timing modifications would reduce the project impact. These additional left-turn lanes may require relocation of existing utilities and removal of trees within the median of Middlefield Road. However, these mitigation measures do not improve intersection operation to an acceptable LOS in the PM peak hour. Therefore the impact is considered **significant and unavoidable** under Existing with Project Conditions. This improvement is designed with reversible bus lane project. No other improvements are possible due to right-of-way constraints.

On-Site Intersections and Streets

The NBPP includes the priority transportation infrastructure described in **Chapter 1** and other new local streets, multi-use paths, modifications to existing streets to include wider sidewalks, landscape areas within the median or along the curb, and cycle tracks on one or both sides of the street (see the NBPP for more details). These street improvements may cause secondary impacts often associated with constructing new infrastructure or modifying existing facilities, such as the removal of trees, relocation of utilities, lengthening of crosswalks, and/or modification of signal phasing that could increase the crossing distance/time for pedestrians and bicyclists.

Salado Drive and Garcia Avenue (Int. #12, Mountain View): Signalizing this intersection would reduce the impact to a **less-than-significant** level.

New North-South Local Street and Shorebird Way (Int. #72, Mountain View): With most of the residential development focused east of Shoreline Boulevard, the intersection of the new north-south local street at

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
