CITY OF MOUNTAIN VIEW
RESOLUTION NO. _____
SERIES 2025

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MOUNTAIN VIEW ADOPTING FINDINGS RELATED TO ENVIRONMENTAL IMPACTS, MITIGATION MEASURES, AND ALTERNATIVES; ADOPTING A STATEMENT OF OVERRIDING CONSIDERATIONS AND A MITIGATION MONITORING AND REPORTING PROGRAM; AND CERTIFYING THE MOUNTAIN VIEW PUBLIC SAFETY BUILDING ENVIRONMENTAL IMPACT REPORT IN COMPLIANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

WHEREAS, in accordance with the California Environmental Quality Act (CEQA), Public Resources Code Section 21000, *et seq.*, the City of Mountain View ("City") has prepared an Environmental Impact Report (EIR) for the MOUNTAIN VIEW PUBLIC SAFETY BUILDING, (hereinafter "Project"); and

WHEREAS, the City prepared and circulated a Draft EIR for the requisite 45-day public comment period, which ended on August 15, 2025, and gave all public notices in the manner and at the times required by law; and

WHEREAS, no public comments were received on the Draft EIR; and

WHEREAS, the Final EIR document dated October 2025, together with the Draft EIR, comprises the Final EIR; and

WHEREAS, the Final EIR identifies certain significant effects on the environment that would result from the implementation of the proposed Project, including impacts to a historical resource on the project site that is eligible for listing in the California Register under Criterion 3; and

WHEREAS, there are specific economic, legal, social, technological, or other benefits that outweigh the project's significant unavoidable impact and support approval of the proposed project, and the City's analysis of the impacts and benefits are articulated in Exhibit D, Statement of Overriding Considerations; and

WHEREAS, the Final EIR identifies mitigation measures which, when implemented, will substantially lessen or avoid the significant effects on the environment caused by the proposed Project, with the exception of the significant unavoidable impacts related to historic resources; and

WHEREAS, the Final EIR identifies and analyzes a reasonable range of alternatives to the proposed Project; and

WHEREAS, the Mitigation Monitoring and Reporting Program has been prepared pursuant to CEQA to monitor the Project and to mitigate or avoid significant effects on the environment; and

WHEREAS, the City Council held a public hearing on November 4, 2025, on the Final EIR and the Project, and received and considered all evidence presented at said hearing, including all associated staff reports, meeting minutes, testimony, and evidence constituting the record of proceedings (as defined in the CEQA Findings); now, therefore, be it

RESOLVED: that the City Council of the City of Mountain View, having independently considered the Final EIR and the potentially significant environmental effects of the Project as shown in the Final EIR:

1. Certifies that the EIR, attached hereto in Exhibit A and Exhibit B, has been completed in compliance with CEQA, reflects the independent judgment and analysis of the City, and has been presented to the City Council, which reviewed and considered the information in it, along with other relevant information in the Record of Proceedings, including, without limitation, public testimony, written correspondence, and staff reports and responses, before approving the Project.

2. Adopts the Mitigation Monitoring and Reporting Program for the Project, attached hereto as Exhibit B.

3. Adopts the CEQA findings for the Project, attached hereto as Exhibit C.

4. Adopts the Statement of Overriding Considerations for the project, attached hereto as Exhibit D.

5. Adopts all of the feasible mitigation measures identified and described in the Final EIR and determines that the Project, as mitigated, will avoid or reduce all of the significant adverse impacts to a less-than-significant level, with the exception of the significant unavoidable impacts related to remove the historical resource on the project site that is eligible for listing in the California Register under Criterion 3 as a significant example of thework of master architect Goodwin Steinberg.

6. Finds that a reasonable range of potentially feasible alternatives were identified and evaluated in the Final EIR and further finds that none of the alternatives identified and evaluated in the Final EIR will achieve the Project objectives to the same degree as the proposed Project and do not represent substantial environmental benefits over the proposed Project and are, therefore, rejected as infeasible, within the meaning of CEQA, in favor of the proposed Project.

1. Executive Summary

1.1 INTRODUCTION

This Draft Environmental Impact Report (EIR) addresses the environmental effects associated with the implementation of the proposed Mountain View Public Safety Building (proposed project). The California Environmental Quality Act (CEQA) requires that local government agencies consider the environmental consequences before taking action on projects over which they have discretionary approval authority. An environmental impact report (EIR) analyzes potential environmental consequences in order to inform the public and support informed decisions by local and state governmental agency decision makers. This document focuses on impacts determined to be potentially significant in the Initial Study completed for this project (see Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments*).

This Draft EIR has been prepared pursuant to the requirements of CEQA. The City of Mountain View, as the lead agency, has reviewed and revised all submitted drafts, technical studies, and reports as necessary to reflect its own independent judgment, including reliance on City technical personnel from other departments and review of all technical subconsultant reports.

Data for this Draft EIR derive from on-site field observations, discussions with affected agencies, analysis of adopted plans and policies, review of available studies, reports, data and similar literature, and specialized environmental assessments (air quality, biological resources, cultural resources, geological resources, greenhouse gas emissions, hazards and hazardous materials, noise, transportation, and tribal cultural resources).

1.2 ENVIRONMENTAL PROCEDURES

This Draft EIR has been prepared pursuant to CEQA to assess the environmental effects associated with implementation of the proposed project, as well as anticipated future discretionary actions and approvals. CEQA established six main objectives for an EIR:

1. Disclose to decision makers and the public the significant environmental effects of proposed activities.
2. Identify ways to avoid or reduce environmental damage.
3. Prevent environmental damage by requiring implementation of feasible alternatives or mitigation measures.

1. Executive Summary

4. Disclose to the public reasons for agency approval of projects with significant environmental effects.
5. Foster interagency coordination in the review of projects.
6. Enhance public participation in the planning process.

An EIR is the most comprehensive form of environmental documentation in CEQA and the CEQA Guidelines; it is intended to provide an objective, factually supported analysis and full disclosure of the environmental consequences of a proposed project with the potential to result in significant, adverse environmental impacts.

An EIR is one of various decision-making tools used by a lead agency to consider the merits and disadvantages of a project that is subject to its discretionary authority. Before approving a proposed project, the lead agency must consider the information in the EIR; determine whether the EIR was prepared in accordance with CEQA and the CEQA Guidelines; determine that it reflects the independent judgment of the lead agency; adopt findings concerning the project's significant environmental impacts and alternatives; and adopt a statement of overriding considerations if significant impacts cannot be avoided.

1.2.1 Draft EIR Organization

Chapter 1: Executive Summary. Summarizes the background and description of the proposed project, the format of this EIR, project alternatives, any critical issues remaining to be resolved, and the potential environmental impacts and mitigation measures identified for the project.

Chapter 2: Introduction. Describes the purpose of this EIR, background on the project, the notice of preparation, the use of incorporation by reference, and Final EIR certification.

Chapter 3: Project Description. A detailed description of the project, including its objectives, its area and location, approvals anticipated to be required as part of the project, necessary environmental clearances, and the intended uses of this EIR.

Chapter 4: Environmental Analysis. Each environmental topic is analyzed in a separate section that discusses: the applicable regulatory framework; existing conditions; the significance criteria used to determine if a significant impact would occur; the methodology to identify and evaluate the potential impacts of the project; the potential adverse and beneficial effects of the project; the level of impact significance with and without mitigation; and the potential cumulative impacts of the proposed project and other existing, approved, and proposed projects in the area.

Chapter 5: Alternatives to the Proposed Project. Describes the alternatives and compares their impacts to the impacts of the proposed project. Alternatives include the No Project Alternative

and the Historic Preservation Alternative. The environmentally superior alternative would be the Historic Preservation Alternative.

Chapter 6: Other CEQA Considerations. Provides a discussion of effects found not to be significant, significant and unavoidable impacts, significant irreversible changes to the environment, and growth-inducing effects.

Chapter 7: Report Preparers. Includes a list of people that prepared or were contacted during the preparation of this Draft EIR.

Appendices: The appendices for this document consist of these supporting documents:

- Appendix A: Notice of Preparation, Initial Study, and Scoping Comments
- Appendix B: Air Quality and Greenhouse Gas Emissions Data
- Appendix C: Historic Resources Evaluation
- Appendix D: Phase I Environmental Site Assessment
- Appendix E: Noise Data

1.2.2 Type and Purpose of This Draft EIR

This Draft EIR has been prepared as a "Project EIR," defined by Section 15161 of the CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3). This type of EIR examines the environmental impacts of a specific development project and should focus primarily on the changes in the environment that would result from the development project. The EIR shall examine all phases of the project including planning, construction, and operation.

1.3 PROJECT LOCATION

The project site is at 1000 Villa Street in the City of Mountain View in Santa Clara County. To the north of Mountain View is San Francisco Bay, to the east is Sunnyvale, to the south is Cupertino, and to the west is Palo Alto and Los Altos. Mountain View is approximately 40 miles southeast of San Francisco and approximately 14 miles west of San José.

The project site is bound by Central Expressway and the Caltrain Railroad to the north, Franklin Street to the east, Villa Street to the south, and South Shoreline Boulevard to the west. The site is assigned Assessor's Parcel Number 158-15-027. Regional access to the project site is from State Route (SR) 82, SR 85, and US 101.

1.4 PROJECT SUMMARY

The City intends to develop the project site in two phases. The proposed project would replace the existing building and associated parking lot. The proposed project includes a new Public

Safety Building, parking garage, shooting range, surface parking, and K-9 training area. In the eastern corner of the project site, 0.6-acre would remain undeveloped for future potential use by the City. The City of Mountain View is the lead agency for the proposed project.

1.5 SUMMARY OF PROJECT ALTERNATIVES

This Draft EIR analyzes alternatives to the proposed project that are designed to reduce the significant environmental impacts of the proposed project and feasibly attain most of the proposed project objectives. There is no set methodology for comparing the alternatives or determining the environmentally superior alternative under CEQA. Identification of the environmentally superior alternative involves weighing and balancing all of the environmental resource areas by the City. The following alternatives to the proposed project were considered and analyzed in detail:

- **Alternative A: No Project Alternative.** Consistent with Section 15126.6(e)(2) of the CEQA Guidelines, the No Project Alternative presents the No Project scenario. Accordingly, under this alternative, the proposed project would not be approved. No development activities would occur on the project site, which would remain in its existing condition.
- **Alternative B: Historic Preservation Alternative.** Under the Historic Preservation Alternative, the existing, 44,914-square-foot Mountain View Police Services - Fire Administration building would not be demolished and the proposed project would occur within the existing building. This alternative assumes that the existing parking garage would be reconfigured and/or expanded to accommodate the increased parking supply included in the proposed project, but no personnel or facility changes would occur within the existing building.

Chapter 5, *Alternatives*, of this Draft EIR, includes a complete discussion of these alternatives. As discussed in Chapter 5, the Historic Preservation Alternative is the Environmentally Superior Alternative pursuant to CEQA Guidelines Section 15126.6.

1.6 ISSUES TO BE RESOLVED

Section 15123(b)(3) of the CEQA Guidelines requires that an EIR contain issues to be resolved, including the choice among alternatives and whether or how to mitigate significant impacts. With regard to the proposed project, the major issues to be resolved include decisions by the lead agency as to:

1. Whether this Draft EIR adequately describes the environmental impacts of the project.
2. Whether the benefits of the project override those environmental impacts which cannot be feasibly avoided or mitigated to a level of insignificance.

3. Whether there are other mitigation measures that should be applied to the project besides the Mitigation Measures identified in the Draft EIR.

4. Whether there are any alternatives to the project that would substantially lessen any of the significant impacts of the proposed project and achieve most of the basic project objectives.

1.7 AREAS OF CONTROVERSY

In accordance with Section 15123(b)(2) of the CEQA Guidelines, the EIR summary must identify areas of controversy known to the lead agency, including issues raised by agencies and the public. Prior to preparation of the Draft EIR, the City of Mountain View issued a Notice of Preparation (NOP) on December 10, 2024. The CEQA-mandated scoping period for this EIR was between December 10, 2024 and January 15, 2025, during which interested agencies and the public could submit comments about the potential environmental impacts of the proposed project. During this time, the City received one comment letter, from the Native American Heritage Commission. This comment letter described regulatory information regarding the tribal consultation process and provided recommendations for cultural resources assessments. Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments*, of this Draft EIR contains the NOP as well as the comment letter received by the City in response to the NOP.

1.8 SUMMARY OF SIGNIFICANT ENVIRONMENTAL IMPACTS

Table 1-1, *Summary of Significant Environmental Impacts and Mitigation Measures*, presents significant impacts and mitigation measures, including the impact's level of significance with the imposition of mitigation measures. For a complete description of potential impacts, including those where no mitigation measures are required, please refer to the specific discussions in Sections 4.1 through 4.8.

1. Executive Summary

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
4.1 AIR QUALITY			
Impact AIR-1: Without mitigation, construction activities for the proposed project could generate fugitive dust that exceeds State standards.	**S**	**Mitigation Measure AIR-1:** The project contractor shall comply with the Bay Area Air District's basic best management practices for reducing construction-related emissions of uncontrolled fugitive dust (coarse inhalable particulate matter [PM_{10}] and fine inhalable particulate matter [$PM_{2.5}$]): ▪ All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day. ▪ All haul trucks transporting soil, sand, or other loose material off-site shall be covered. ▪ All visible mud or dirt trackout onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited. ▪ All vehicle speeds on unpaved roads shall be limited to 15 mph. ▪ All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used. ▪ Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics	**LTS**

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		control measures Title 13, Section 2485, of the California Code of Regulations). Clear signage shall be provided for construction workers at all access points. ▪ All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation. ▪ All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph. ▪ All trucks and equipment, including their tires, shall be washed off prior to leaving the site. ▪ Unpaved roads providing access to sites located 100 feet or further from a paved road shall be treated with a 6- to 12-inch layer of compacted layer of wood chips, mulch, or gravel. ▪ Publicly visible signs shall be posted with the telephone number and name of the person to contact at the City regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's General Air Pollution Complaints number shall also be visible to ensure compliance with applicable regulations. These measures shall be noted on grading plans prepared by the	

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

1. Executive Summary

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		applicant submitted to the City of Mountain View Building Division. The construction contractor shall implement these measures during ground disturbing activities. The City shall verify compliance that these measures have been implemented during normal construction site inspections.	
Impact AIR-2: Construction activities for the proposed project could generate cancer risks above acceptable levels for the maximally exposed residential receptor.	**S**	**Mitigation Measure AIR-2:** The City of Mountain View shall specify in the construction bid that the project construction contractor(s) and subcontractor(s) comply with the following requirements for all off-road equipment used over the entire duration of the construction activities at the site: ▪ Use engines that meet either US EPA or California Air Resources Board (CARB) Tier 4 Final emission standards for engines that are greater than 25 horsepower. Ensure that all construction plans submitted to the City of Mountain View Building Division clearly show the selected emission reduction strategy for construction equipment over 25 horsepower. ▪ If Tier 4 Final equipment is not available for use for the project for a specific piece of off-road construction equipment, documentation shall be provided to the City of Mountain View demonstrating that such equipment is not available for the project. If Tier 4 Final equipment is not available, the construction contractor(s) and subcontractor(s) affected shall use Tier 4 Interim equipment	**LTS**

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		instead. If Tier 4 Interim equipment is not available for use for the project for a specific piece of off-road construction equipment, documentation shall be provided to the City demonstrating that such equipment is not available for the project. If Tier 4 Interim equipment is not available, the construction contractor(s) and subcontractor(s) affected shall use Tier 3 equipment outfitted with a level 3 diesel particulate filter instead. ▪ Prohibit the use of generators except for electric alternatives. The City shall ensure that all construction plans submitted to the City of Mountain View Building Division clearly show the requirement to use power storage equipment or electric generators in lieu of fossil fuel powered generators. ▪ Maintain a list of all operating equipment in use on the project site for verification by the City or their designee. The construction equipment list shall state the makes, models, fuel type, and number of construction equipment on-site. All equipment shall be properly serviced and maintained in accordance with the manufacturer's recommendations. ▪ Communicate with all sub-contractors in contracts and construction documents that all non-essential idling of construction equipment is restricted to 5 minutes or less in compliance with California Air Resources Board Rule 2449 and is responsible for ensuring that this requirement is met.	

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

1. Executive Summary

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
4.2 BIOLOGICAL RESOURCES			
Impact BIO-1: Tree removal and demolition activities during site clearance could destroy active nests, and/or otherwise interfere with nesting of birds protected under federal and State law.	**S**	**Mitigation Measure BIO-1:** Nests of raptors and other birds shall be protected when in active use, as required by the federal Migratory Bird Treaty Act and the California Fish and Game Code. The construction contractor shall indicate the following on all construction plans, if construction activities and any required tree removal occur during the breeding season (February 1 and August 31). Preconstruction surveys shall: ▪ Be conducted by a qualified biologist prior to tree removal or grading, demolition, or construction activities. Note that preconstruction surveys are not required for tree removal or construction, grading, or demolition activities outside the nesting period. ▪ Be conducted no more than 14 days prior to the start of tree removal or construction. ▪ Be repeated at 14-day intervals until construction has been initiated in the area after which surveys can be stopped. ▪ Document locations of active nests containing viable eggs or young birds. Protective measures for active nests containing viable eggs or young birds shall be implemented under the direction of the qualified biologist until the nests no longer contain eggs or young birds. Protective measures shall include:	**LTS**

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		▪ Establishment of clearly delineated exclusion zones (i.e., demarcated by identifiable fencing, such as orange construction fencing or equivalent) around each nest location as determined by the qualified biologist, taking into account the species of birds nesting, their tolerance for disturbance and proximity to existing development. In general, exclusion zones shall be a minimum of 300 feet for raptors and 75 feet for passerines and other birds. ▪ Monitoring active nests within an exclusion zone on a weekly basis throughout the nesting season to identify signs of disturbance and confirm nesting status. ▪ An increase in the radius of an exclusion zone by the qualified biologist if project activities are determined to be adversely affecting the nesting birds. Exclusion zones may be reduced by the qualified biologist only in consultation with California Department of Fish and Wildlife. ▪ The protection measures shall remain in effect until the young have left the nest and are foraging independently or the nest is no longer active.	
Impact BIO-2: The proposed development would result in removal of trees protected under City's Municipal Code.	**S**	**Mitigation Measure BIO-2:** The proposed project shall comply with the City of Mountain View's Municipal Code requirements for the provision of the removal of heritage trees in Chapter 32, Trees, Shrubs and Plants, Article II, Protection of The Urban Forest. A tree removal permit shall be obtained for the removal of	**LTS**

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

1. Executive Summary

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		any "heritage" tree, and replacement plantings shall be provided as approved by the City. If permitted, any replacement trees be placed off-site or an appropriate in-lieu tree replacement fee may be paid to the City of Mountain View as compensation for "heritage" trees removed by the proposed project, where sufficient land area is not available on-site for adequate replacement and when approved by the City. In addition, a Tree Protection and Replacement Program (Program) shall be developed by a Certified Arborist prior to project approval and implemented during project construction to provide for adequate protection and replacement of "heritage" trees, as defined by the City's Municipal Code. The Program shall include, but is not limited to, the following provisions: ▪ Adequate measures shall be defined to protect all trees to be preserved. These measures should include the establishment of a tree protection zone (TPZ) around each tree to be preserved, in which no disturbance is permitted. For design purposes, the TPZ shall be located at the dripline of the tree or 10 feet, whichever is greater. If necessary, the TPZ for construction-tolerant species (i.e., coast live oaks) may be reduced to 7 feet. ▪ Temporary construction fencing shall be installed at the perimeter of TPZs prior to demolition, grubbing, or grading.	

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		Fences shall be 6-foot chain link or equivalent, as approved by the City of Mountain View. Fences shall remain until all construction is completed. Fences shall not be relocated or removed without permission from the consulting arborist. ▪ No grading, excavation, or storage of materials shall be permitted within TPZs. Construction trailers, traffic, and storage areas shall remain outside fenced areas at all times. No excess soil, chemicals, debris, equipment, or other materials shall be dumped or stored within the TPZ. ▪ Underground services including utilities, sub-drains, water or sewer shall be routed around the TPZ. Where encroachment cannot be avoided, special construction techniques such as hand digging or tunneling under roots shall be employed where necessary to minimize root injury. Irrigation systems must be designed so that no trenching will occur within the TPZ. ▪ Construction activities associated with structures and underground features to be removed within the TPZ shall use the smallest equipment and operate from outside the TPZ. The consulting arborist shall be on-site during all operations within the TPZ to monitor demolition activity. ▪ All grading, improvement plans, and construction plans shall clearly indicate trees proposed to be removed, altered, or otherwise affected by development construction. The tree

1. Executive Summary

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		information on grading and development plans should indicate the number, size, species, assigned tree number, and location of the dripline of all trees that are to be retained/preserved. All plans shall also include tree preservation guidelines prepared by the consulting arborist. ▪ The demolition contractor shall meet with the consulting arborist before beginning work to discuss work procedures and tree protection. Prior to beginning work, the contractor(s) working in the vicinity of trees to be preserved shall be required to meet with the consulting arborist at the site to review all work procedures, access routes, storage areas, and tree protection measures. ▪ All contractors shall conduct operations in a manner that will prevent damage to trees to be preserved. Any grading, construction, demolition or other work that is expected to encounter tree roots shall be monitored by the consulting arborist. If injury should occur to any tree during construction, it should be evaluated as soon as possible by the consulting arborist so that appropriate treatments can be applied. ▪ Any plan changes affecting trees shall be reviewed by the consulting arborist with regard to tree impacts. These include, but are not limited to, site improvement plans, utility and drainage plans, grading plans, landscape and	

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		irrigation plans, and demolition plans. ▪ Trees to be preserved may require pruning to provide construction clearance. All pruning shall be completed by a State of California Licensed Tree Contractor (C61/D49). All pruning shall be done by Certified Arborist or Certified Tree Worker in accordance with the current Best Management Practices for Pruning published by the International Society of Arboriculture, and adhere to the current editions of the American National Standard for Tree Care Operations (Section Z133.1) and Pruning (Section A300). ▪ Any root pruning required for construction purposes shall receive the prior approval of and be supervised by the consulting arborist. ▪ Any demolition or excavation, such as grading, pad preparation, excavation, and trenching, within the dripline or other work that is expected to encounter tree roots should be approved and monitored by the consulting arborist. Any root pruning required for construction purposes shall receive prior approval of, and by supervised by, the consulting arborist. Roots shall be cut by manually digging a trench and cutting exposed roots with a sharp saw. ▪ Tree(s) to be removed that have branches extending into the canopy of tree(s) to remain must be removed by a qualified arborist and not by construction contractors. The qualified

1. Executive Summary

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		arborist shall remove the tree in a manner that causes no damage to the tree(s) and understory to remain. Tree stumps shall be ground 12 inches below ground surface. ▪ All tree work shall comply with the Migratory Bird Treaty Act as well as California Fish and Game Code Sections 3503 through 3513 to not disturb nesting birds. To the extent feasible, tree pruning, and removal shall be scheduled outside of the breeding season. Breeding bird surveys shall be conducted prior to tree work. Qualified biologists shall be involved in establishing work buffers for active nests. (See Mitigation Measure BIO-1.) ▪ The vertical and horizontal locations of all the trees identified for preservation shall be established and plotted on all plans. These plans shall be forwards to the consulting arborist for review and comment. ▪ Foundations, footings, and pavements on expansive soils near trees shall be designed to withstand differential displacement to protect the soil surrounding the tree roots. ▪ Any liming within 50 feet of any tree shall be prohibited, as lime is toxic to tree roots. Any herbicides placed under paving materials shall be safe for use under trees and labeled for that use. ▪ Brush from pruning and trees removal operations shall be chipped and spread beneath the trees within the TPZ. Mulch

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		shall be between 2 inches and 4 inches in depth and kept at a minimum of 3 feet from the base of the trees. ▪ All recommendations for tree preservation made by the applicant's consulting arborist shall be followed.	
4.3 CULTURAL AND TRIBAL CULTURAL RESOURCES			
Impact CUL-1: The proposed project would remove the historical resource on the project site that is eligible for listing in the California Register under Criterion 3 as a significant example of the work of master architect Goodwin Steinberg.	**S**	**Mitigation Measure CUL-1.1:** The City shall have Historic American Building Survey Level II documentation completed for the Mountain View Police Services - Fire Administration building and its setting. To ensure public access, the City shall submit copies of the documentation to Mountain View Historical Association's History Center and the California Historical Resources Information System Northwest Information Center. This documentation shall include drawings, photographs, and a historical narrative: ▪ **Drawings:** Existing historic drawings of the historical resource shall be photographed with large-format negatives or photographically reproduced on Mylar. In the absence of existing drawings, full-measured drawings of the building's plan and exterior elevations shall be prepared prior to demolition. ▪ **Photographs:** Photo-documentation of the historical resource shall be prepared to Historic American Building Survey standards for archival photography, prior to demolition. Historic American Building Survey standards	**SU**

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

1. Executive Summary

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		require large-format black-and-white photography, with the original negatives having a minimum size of four inches by five inches. Digital photography, roll film, film packs, and electronic manipulation of images are not acceptable. All film prints, a minimum of four inches by five inches, must be hand-processed according to the manufacturer's specifications and printed on fiber-base, single-weight paper and dried to a full gloss finish. A minimum of 12 photographs shall be taken, detailing the site, building exterior, building interior, and character-defining features. Photographs must be identified and labeled using Historic American Building Survey standards. ▪ **Historical Overview:** A professional meeting the Secretary of the Interior's Professional Qualification Standards in Architectural History or History shall assemble historical background information relevant to the historical resource. The City of Mountain View shall verify compliance with this mitigation measure prior to the initiation of any site or building demolition or construction activities.	
		Mitigation Measure CUL-1.2: The City shall incorporate an exhibit or display of the Mountain View Police Services - Fire Administration building and a description of its historical significance into a publicly accessible portion of the proposed	

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		Public Safety Building. The display shall be developed with the assistance of one or more professionals experienced in creating such historical exhibits or displays.	
Impact CUL-2: Construction activities for the proposed project have the potential to cause a substantial adverse change in the significance of an archaeological resource pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15064.5.	**S**	**Mitigation Measure CUL-2:** Project supervisors, contractors, and equipment operators shall participate in an Archaeological Resource Awareness Training, conducted by a Secretary of Interior-qualified archaeologist, to become familiar with the type of artifacts and features that could be encountered during project-related ground disturbing activities, as well as the procedures to follow if archaeological resources are unearthed during construction. If indigenous, prehistoric or historic-period cultural materials are unearthed during ground-disturbing activities, all work within 100 feet of the find shall halt until a qualified archaeologist and Native American representative can assess the significance of the find. The City and a qualified archaeologist, defined as one meeting the U.S. Secretary of the Interior's Professional Qualifications Standards for Archaeology, and a Native American representative shall be immediately informed of the discovery. Prehistoric and indigenous materials might include obsidian and chert-flaked stone tools (e.g., projectile points, knives, scrapers) or tool-making debris; culturally darkened soil ["midden"] containing heat-affected rocks and artifacts; stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); and battered-stone tools, such as hammerstones and pitted stones. Historic-period materials might	**LTS**

1. Executive Summary

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse. If the find is determined to be potentially significant, the archaeologist, in consultation with the Native American representative, shall develop a treatment plan that could include site avoidance, capping, or data recovery. If avoidance is not feasible, project impacts shall be mitigated in accordance with the recommendations of the archeologist, in coordination with the City, Native American representative, and pursuant to CEQA Guidelines Section 15126.4 (b)(3)(C), which requires implementation of a data recovery plan. Once the recovery plan has been reviewed and approved by the City, implemented, and any appropriate resource recovery completed, project construction activity within the area of the find may resume.	
Impact CUL-3: Construction activities for the proposed project have the potential to result in unanticipated discovery of human remains interred outside of dedicated cemeteries.	**S**	**Mitigation Measure CUL-3:** In the event of the discovery of human remains during demolition, excavation, or construction, there shall be no further excavation or disturbance of the site within a 50-foot radius of the location of such discovery, or any nearby area reasonably suspected to overlie adjacent remains, and the area shall be secured to prevent further disturbance. The City and the Santa Clara County Coroner shall be notified and shall make a determination as to whether the remains are Native American. If the Coroner determines that the remains are not subject to their authority, the Coroner shall notify the Native	**LTS**

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		American Heritage Commission within 24 hours, which shall attempt to identify descendants of the deceased Native American. If no satisfactory agreement can be reached as to the disposition of the remains pursuant to this State law, then the landowner, in consultation with a qualified archaeologist, shall formulate an appropriate treatment plan for the find, which might include, but not be limited to, respectful scientific recording and removal, being left in place, removal and reburial on-site, or elsewhere. Associated grave goods are to be treated in the same manner. A final report shall be submitted to the City's Community Development Director prior to release of a Certificate of Occupancy. This report shall contain a description of the mitigation programs and its results, including a description of the monitoring and testing resources analysis methodology and conclusions, and a description of the disposition/curation of the resources. The report shall verify completion of the mitigation program to the satisfaction of the City's Community Development Director.	
Impact CUL-4: Construction activities for the proposed project have the potential to cause a significant impact to an unknown tribal cultural resource as defined in Public Resources Code 21074.	**S**	**Mitigation Measure CUL-4:** Implement Mitigation Measures CUL-2 and CUL-3.	**LTS**

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

1. Executive Summary

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
4.4 GEOLOGY AND SOILS			
Impact GEO-1: The construction activities, increased site occupancy, and development of new structures under the proposed project could exacerbate an existing hazard associated with liquefaction due to seismic events.	**S**	**Mitigation Measure GEO-1:** Prior to the issuance of building permits, the project sponsor shall retain the services of a certified engineering geologist and/or geotechnical engineer to prepare a site-specific geotechnical study based on the most recent draft of the conceptual site plans. The geotechnical study shall address, but is not limited to, the effects of seismically induced liquefaction, and include recommendations to ensure any potential hazards related to the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction would not occur. The geotechnical study shall be approved by the City of Mountain View's Building Inspection Department prior to the issuance of building permits.	**LTS**
Impact GEO-2 The construction activities, development, and increased site occupancy involved in the proposed project could exacerbate an existing hazard associated with unstable soils due to seismically induced liquefaction.	**S**	**Mitigation Measure GEO-2:** Implement Mitigation Measure GEO-1.	**LTS**
4.5 GREENHOUSE GAS EMISSIONS			
No significant impacts			

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
4.6 HAZARDS AND HAZARDOUS MATERIALS			
Impact HAZ-1: The proposed project could create a hazard to future site occupants due to the release of hazardous materials originating from off-site land uses.	**S**	**Mitigation Measure HAZ-1:** Prior to issuance of demolition or grading permits, shallow soil samples and groundwater samples shall be taken in the near surface soil and tested for tetrachloroethylene to determine if contaminants from previous operations on the former Fremont Laundry or Evelyn Avenue parking lot sites are present at concentrations above established regulatory construction worker safety and commercial environmental screening levels. The results of the soil sampling and testing must be provided to the City of Mountain View Community Development Department. If contaminated soils or groundwater are found in concentrations above the appropriate regulatory environmental screening levels for the proposed project, the project sponsor shall obtain regulatory oversight from the Santa Clara County Department of Environmental Health, Department of Toxic Substances Control, or Regional Water Quality Control Board to mitigate the contamination found. A Site Management Plan (SMP), Removal Action Plan (RAP), or equivalent document must be prepared by a qualified hazardous materials consultant. The plan must establish remedial measures and/or soil management practices to ensure construction worker safety and the health of future workers and visitors to the project site during operation of the proposed	**LTS**

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

1. Executive Summary

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		project. Evidence of regulatory oversight and a regulatory approved plan shall be provided to the City of Mountain View Community Development Department. In the event that vapor encroachment is discovered, the proposed project shall develop a vapor management plan. The vapor management plan shall be prepared in consultation with applicable regulatory agencies, including the Department of Toxic Substances Control and the Regional Water Quality Control Board, and shall be reviewed and accepted by the City of Mountain View prior to the issuance of demolition and grading permits.	
4.7 NOISE			
Impact NOI-1: The proposed project would generate a substantial temporary increase in ambient noise levels during construction.	**S**	**Mitigation Measure NOI-1:** The project sponsor shall incorporate the following practices into the construction contract specifications to be implemented by the construction contractor during the entire construction phase of the project. The project sponsor and contractors shall prepare a Construction Noise Control Plan that includes the following measures: ▪ Limit construction to the hours of 8:00 a.m. to 6:00 p.m., Monday through Friday, and between 9:00 a.m. to 5:00 p.m. on weekends. ▪ Construct temporary noise barriers, where feasible, to screen receptors to the west, south, and east from the	**LTS**

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		construction area. Temporary noise barrier fences would provide a 5 dBA noise reduction if the noise barrier interrupts the line-of-sight between the noise source and receptor and if the barrier is constructed in a manner that eliminates any cracks or gaps. ▪ At least 21 days prior to the start of construction activities, property owners within a 500-foot radius of the project site shall be notified of the planned construction. The notification shall include a brief description of the project, a description of the construction phases to occur, the construction hours noted above, and the overall construction duration. The notification shall include the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. ▪ At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours, as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, they shall investigate, take appropriate corrective action, and report the action to the City. ▪ Prior to the start of construction, the project sponsor shall	

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

1. Executive Summary

Table 1-1 Summary of Significant Environmental Impacts and Mitigation Measures

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		retain a qualified acoustical consultant to conduct construction noise monitoring during the major phases of project construction at select locations in the surrounding neighborhood. The number and location of monitoring positions, and the construction phases during which monitoring shall occur, shall be determined by City staff in consultation with the acoustical consultant. All sound level meters used during monitoring shall satisfy the American National Standards Institute (ANSI) standard of Type 1 instrumentation. All measurements shall be at least 5 feet above the ground and away from reflective surfaces. The noise monitoring data and results shall be submitted in a memorandum to the City on a weekly basis during the construction phases requiring monitoring, along with comparison to the 80 dBA Leq (8-hr) construction noise limit. If exceedances of the construction noise limit are found, the applicant's construction contractor shall modify construction techniques and equipment to reduce the construction noise below the 80 dBA Leq (8-hr) limit. ▪ Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. The signs shall note that all other equipment shall be turned off if not in use for more than 5 minutes. The construction manager shall be responsible for enforcing these noise	

LTS = Less than Significant; S = Significant; SU = Significant and Unavoidable

Environmental Impact	Level of Significance without Mitigation	Mitigation Measures	Level of Significance with Mitigation
		reduction requirements. ▪ Construction trucks and equipment shall utilize the best available noise control techniques including improved mufflers, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds, wherever feasible. ▪ The contractor shall use impact tools that are hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools. ▪ Stationary noise sources (e.g., generators and air compressors) shall be located as far from sensitive receptors as possible, and they shall be muffled and enclosed within temporary sheds, insulation barriers, or other measures to reduce noise levels to the extent feasible. ▪ Stockpiling of materials shall be located as far as feasible from nearby noise-sensitive receptors. ▪ During the entire active construction period, the use of noise-producing signals—including horns, whistles, alarms, and bells—shall be for safety warning purposes only. The construction manager shall require the use of smart back-up alarms on equipment. (These devices automatically adjust the alarm level based on the background noise level.)

2. Introduction

2.1 PURPOSE OF THE ENVIRONMENTAL IMPACT REPORT

The California Environmental Quality Act (CEQA) requires that all state and local governmental agencies consider the environmental consequences of projects over which they have discretionary authority before taking action on those projects. This Draft Environmental Impact Report (EIR) has been prepared to satisfy CEQA and the CEQA Guidelines. The EIR is the public document designed to provide decision makers and the public with an analysis of the environmental effects of the proposed project, to indicate possible ways to reduce or avoid environmental damage and to identify alternatives to the project. The EIR must also disclose significant environmental impacts that cannot be avoided; growth inducing impacts; effects not found to be significant; and significant cumulative impacts of all past, present, and reasonably foreseeable future projects.

The lead agency means "the public agency which has the principal responsibility for carrying out or approving a project which may have a significant effect upon the environment" (CEQA Section 21067). The City of Mountain View (City) has the principal responsibility for approval of the proposed Mountain View Public Safety Building project (proposed project). For this reason, the City is the CEQA lead agency for this project.

The intent of the Draft EIR is to provide sufficient information on the potential environmental impacts of the proposed project to allow the City to make an informed decision regarding approval of the proposed project. Specific discretionary actions to be reviewed by the City are described in Section 3.4, *Intended Uses of the EIR*.

This Draft EIR has been prepared in accordance with requirements of the:

- California Environmental Quality Act (CEQA) of 1970, as amended (Public Resources Code, Sections 21000 et seq.)
- State Guidelines for the Implementation of the CEQA of 1970 (CEQA Guidelines), as amended (California Code of Regulations, Sections 15000 et seq.)

The overall purpose of this Draft EIR is to inform the lead agency, responsible agencies, decision makers, and the general public about the environmental effects of the development and operation of the proposed project. This Draft EIR addresses effects that may be significant and adverse; evaluates alternatives to the project; and identifies mitigation measures to reduce or avoid adverse effects.

2. Introduction

2.2 ENVIRONMENTAL REVIEW PROCESS

2.2.1 Notice of Preparation and Initial Study

The City determined that an EIR would be required for this project and issued a notice of preparation (NOP) and initial study on December 10, 2024 (see Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments*, of this Draft EIR). The CEQA-mandated scoping period for this EIR was between December 10, 2024 and January 15, 2025, during which interested agencies and the public could submit comments about the potential environmental impacts of the proposed project. During this time, the City received one comment letter, from the Native American Heritage Commission, dated December 13, 2024.

The NOP process helps determine the scope of the environmental issues to be addressed in the Draft EIR. Based on this process and the initial study for the project, certain environmental categories were identified as having the potential to result in significant impacts. Issues considered potentially significant are addressed in this Draft EIR, but issues identified as less than significant or no impact are not. Refer to the initial study in Appendix A for discussion of how these initial determinations were made.

2.2.2 Draft EIR

This Draft EIR will be available for review by the public and interested parties, agencies, and organizations for a 45-day comment period starting July 1, 2025, and ending August 15, 2025. During the comment period, the public is invited to provide written comments on the Draft EIR via mail or email to the City of Mountain View Public Works Department by 5:00 p.m. on August 15, 2025. Comments should be submitted as follows:

- Written: Naveen Govind, Senior Project Manager
  City of Mountain View
  500 Castro Street
  Mountain View, California, 94041
- Phone: (650) 903-6527
- Email: Naveen.Govind@mountainview.gov with “Public Safety Building EIR” as the subject line.

2.2.3 Final EIR Certification

Upon completion of the public review period for the Draft EIR, the City will review all written comments received and prepare written responses for each. A Final EIR will incorporate the received comments, responses to the comments, and any changes to the Draft EIR that result

from comments. The Final EIR will be presented to the City for potential certification as the environmental document for the project.

2.3 SCOPE OF THIS DRAFT EIR

The scope of the Draft EIR was determined based on the City's initial study and comments received in response to the NOP. Pursuant to Sections 15126.2 and 15126.4 of the CEQA Guidelines, the Draft EIR should identify any potentially significant adverse impacts and recommend mitigation that would reduce or eliminate these impacts to levels of insignificance.

2.3.1 Impacts Considered Less than Significant

During preparation of the initial study, the City determined that 11 environmental impact categories were not significantly affected by the proposed project. These categories are not discussed in detail in this Draft EIR.

- Aesthetics
- Agriculture and Forestry Resources
- Energy
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Population and Housing
- Public Services
- Recreation
- Utilities and Service Systems
- Wildfire

2.3.2 Potentially Significant Adverse Impacts

Through the initial study process, the City determined that further analysis was needed for some of the significance criteria for five environmental topics (air quality, biological resources, geology and soils, hazards and hazardous conditions, noise, and transportation) and all of the significance criteria for three environmental topics (cultural resources, greenhouse gas emissions, and tribal cultural resources) to determine whether the proposed project would result in potentially significant impacts. These topics and specific significance criteria are evaluated in detail in Chapter 4, *Environmental Analysis*, of this Draft EIR.

- **Air Quality**
  a) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard.
  b) Expose sensitive receptors to substantial pollutant concentrations.
  c) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

2. Introduction

- **Biological Resources**
  a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.
  b) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.
- **Cultural Resources**
  a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5.
  b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5.
  c) Disturb any human remains, including those interred outside of dedicated cemeteries.
- **Geology and Soils**
  a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction.
  b) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse.
- **Greenhouse Gas Emissions**
  a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.
  b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.
- **Hazards and Hazardous Materials**
  a) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.
- **Noise**
  a) Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
  b) Generate excessive groundborne vibration or groundborne noise levels.
- **Transportation**
  a) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b).
- **Tribal Cultural Resources**
  a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or
- ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

2.4 INCORPORATION BY REFERENCE

Some documents are incorporated by reference into this Draft EIR, consistent with Section 15150 of the CEQA Guidelines, and they are available for review at the City of Mountain View website.

- *Mountain View 2030 General Plan,* City of Mountain View Community Development Department, July 2012.
- *City Of Mountain View Draft 2030 General Plan and Greenhouse Gas Reduction Program Final Environmental Impact Report,* LSA Associates, September 2012.

2.5 MITIGATION MONITORING

Public Resources Code Section 21081.6 requires that agencies adopt a monitoring or reporting program for any project for which it has made findings pursuant to Public Resources Code Section 21081 or adopted a Negative Declaration pursuant to Section 21080(c). Such a program is intended to ensure the implementation of all mitigation measures adopted through the preparation of an EIR or Negative Declaration.

The Mitigation Monitoring Program for the proposed project will be completed as part of the Final EIR, prior to consideration of the project by the City of Mountain View.

2. Introduction

This page is intentionally left blank.

3. Project Description

3.1 INTRODUCTION

This chapter of the Draft Environmental Impact Report (EIR) describes the proposed Mountain View Public Safety Building Project (proposed project) to the public, reviewing agencies, and decision makers. Pursuant to the California Environmental Quality Act (CEQA) and the State CEQA Guidelines (State CEQA Guidelines Section 15124), an environmental impact report (EIR) should contain a description of the proposed project that includes:

- The precise location and boundaries of the proposed project;
- A statement of the objectives sought by the proposed project, including the underlying purpose of the project;
- A general description of the project's technical, economic, and environmental characteristics; and
- A statement briefly describing the intended uses of the EIR, including a list of the agencies that are expected to use the EIR in their decision making, a list of permits and other approvals required to implement the project, and a list of related environmental review and consultation requirements required by federal, state, or local laws, regulations, or policies.

An adequate project description should not supply extensive detail beyond that needed for evaluation and review of environmental impacts. Accordingly, this chapter describes the necessary details of the proposed project that are critical in assessing the direct, indirect, long-term, and temporary impacts associated with project implementation. This project description identifies key elements of the proposed project including information about the location, setting, and characteristics of the project site; the principal project features; project objectives; and required permits and approvals. The City of Mountain View (City) is the lead agency for the proposed project.

3.2 PROJECT SITE LOCATION AND SETTING

3.2.1 Regional and Local Location

The project site is at 1000 Villa Street in the city of Mountain View in Santa Clara County. To the north of Mountain View is San Francisco Bay, to the east is Sunnyvale, to the south is the city of Cupertino, and to the west are the cities of Palo Alto and Los Altos (see Figure 3-1, *Regional and Local Vicinity Map*). Mountain View is approximately 40 miles southeast of the city and county of San Francisco and approximately 14 miles west of the city of San José.

As shown on Figure 3-1, the 4.3-acre project site is bounded by West Evelyn Avenue to the north, Franklin Street and Oak Street to the south, and South Shoreline Boulevard to the west. The site is assigned Assessor's Parcel Number 158-15-027. Regional access to the project site is from United States (US) Highway 101, State Route 82 (SR-82), and SR-85.

3.2.2 Existing Site and Surrounding Conditions

The project site is the location of the existing Mountain View Police Department. As shown on Figure 3-2, *Aerial Photograph*, the project site is currently occupied by the Mountain View Police Services - Fire Administration building; a 42-stall public parking lot; a 110-stall, restricted-access parking lot; a pump station; and a K-9 training area.

As shown on Figure 3-2, the project site is mainly surrounded by single- and multi-family residential, commercial, and institutional land uses. The project site is surrounded by one and two-story residential buildings to the north across the Caltrain railroad tracks and then Central Expressway; two four-story apartment buildings and two-story offices to the east; one- and two-story residential buildings to the south; and one- and two-story residential buildings directly west, with the Kahn Lab School located west across South Shoreline Boulevard. The Khan Lab School is approximately 0.15 miles west of the project site. The Mountain View Fire Department Station No. 1 is 0.1 miles southwest of the project site along Oak Street.

3.2.3 General Plan Land Use and Zoning

The project site has a General Plan land use designation of Parks, Schools and City Facilities with a corresponding zoning designation of Public Facility (PF). According to the Mountain View General Plan land use designation map, low density residential neighborhoods are to the north, downtown mixed use is to the east, low density residential neighborhoods are to the south, and medium-density residential and office uses are to the west.[1]

Figure 3-2
Aerial Photograph

3.3 STATEMENT OF OBJECTIVES

The objectives for the proposed project include:

- **General Plan Consistency.** Provide for the development of the site consistent with City's General Plan.
- **Enhance Public Safety Infrastructure.** Construct a modern, state-of-the-art Public Safety Building that meets the operational needs of the Mountain View Police Department (MVPD) and other public safety personnel.
- **Improve Operational Efficiency.** Provide upgraded facilities, including offices, an auditorium, sleep quarters, lockers, and fitness areas, to enhance the functionality and efficiency of police and fire department operations.
- **Increase Parking Capacity.** Develop a three-story parking garage and reconfigure surface parking to accommodate approximately 244 parking spaces, improving access for personnel and visitors.
- **Enhance Site Access and Circulation.** Improve vehicular and pedestrian access with designated secured and public entry points from Oak Street and Franklin Street while maintaining connectivity to major transportation routes.
- **Preserve Flexibility for Future City Uses.** Reserve 0.6 acres of the project site for potential future municipal development to accommodate evolving community needs.
- **Site Reuse.** Utilize the site that currently houses the Mountain View Police Services - Fire Administration building at 1000 Villa Street due to its central location and parcel size that allows for the size and mix of facilities envisioned for the proposed project.

3.4 PROJECT CHARACTERISTICS

"Project," as defined by the CEQA Guidelines, means:

> ... the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment, and that is any of the following: (1)…enactment and amendment of zoning ordinances, and the adoption and amendment of local General Plans or elements thereof pursuant to Government Code Sections 65100–65700. (14 California Code of Regulations Section 15378[a])

3. Project Description

The proposed project would remove the existing Mountain View Police Services - Fire Administration building and associated parking lot and K-9 training area, and construct a new Public Safety Building, parking garage, indoor shooting range, surface parking, and K-9 training area at the same location. In the eastern corner of the project site, 0.6-acre would remain undeveloped for future potential use by the City. See Figure 3-3, *Proposed Site Plan*.

3.4.1 Public Safety Building

Table 3-1, *Existing and Proposed Project Site Conditions*, compares the existing conditions to those of the proposed project. As shown in Table 3-1, the current building, which serves as the headquarters for the police and fire departments, is 44,914 square feet, and the proposed Public Safety Building would be approximately 75,000 square feet, three stories high and a floor area ratio of 0.49. The proposed Public Safety Building would have a variety of offices and associated service rooms for police and fire activities. Some of the designated areas include an auditorium, offices, sleeping quarters, lockers, and a fitness room (see Figure 3-4, *First Floor Plan*; Figure 3-5, *Second Floor Plan*; and 3-6, *Third Floor Plan*). All new facilities would meet current State building standards and would be Leadership in Energy and Environmental Design (LEED) Gold certified, as required in the Mountain View Municipal Code Section 8.20.12. Once built, the proposed Public Safety Building would have an immediate personnel increase of thirteen (13) environmental health staff who would be relocated to the proposed project, for an on-site employee population of 182 employees compared to the existing on-site employee population of 169 employees. At maximum capacity, the proposed Public Safety Building could accommodate up to 242 personnel; however, this number is not the staffing level that is proposed as part of the project.

Table 3-1 Existing and Proposed Project Site Conditions

	Existing Conditions	Proposed Project
Site Area	4.3 acres	4.3 acres
Building Size	44,914 square feet	75,000 square feet
Building Height	1 to 2 stories, with 45-foot clock tower	3 stories
Surface Parking Spaces	42 spaces	76 spaces
Garage Parking Spaces	110 spaces	168 spaces
Total Parking Spaces	152 spaces	244 spaces
Employment	169 employees	182 employees

3.4.2 K-9 Training Area

The K-9 training area would be in the same location as the existing K-9 training area in the western portion of the project site and would be similar in size. The K-9 training area would be designed and utilized in a very similar fashion to its existing use, and no large upgrades are proposed.

3.4.3 Indoor Shooting Range

The proposed project includes a new indoor shooting range on the top level of the proposed parking garage. The shooting range would be approximately 12,215 square feet in size and would follow industry standards and regulations to address air quality effects, noise, reverberation, and echoes.

3.4.4 Site Access and Circulation

The proposed project would have two vehicular access points. One would be along Oak Street and would be secured, while the other access point would be along Franklin Street and would be open to the public.

Major arterials that can be used to access the project site are Highway 101 and the Central Expressway to the north, State Route 85 to the east, and West El Camino Real and Interstate 280 to the south. Additionally, the site can be accessed via the Caltrain railroad, which is directly north of the site with a station located 0.2 miles to the east.

3.4.5 Vehicular Parking

The proposed project includes a three-story parking garage that would include approximately 168 parking spaces. As previously described, the top level of the parking garage would contain the proposed indoor shooting range. The existing, 152-space surface parking lot would be reconfigured/relocated to other surface parking spaces for City personnel and a surface lot for future visitors to the proposed Public Safety Building. Currently, the current building site accommodates 152 parking spaces in total, including public/visitor parking and restricted-access employee parking areas. With the addition of the parking garage and surface parking lot reconfigurations, the proposed project would accommodate approximately 244 parking spaces, including the public/visitor parking lot. Out of the 244 total parking spaces across the site, 210 parking spaces would have restricted access and 34 spaces would be open to the public. Of the total parking spaces, 168 would be garage parking and the remaining 76 parking spaces would be dedicated to surface parking. All parking will meet the California Green Building Standards Code (24 CCR, Part 11, known as “CALGreen”) Tier 2 parking standards for electric vehicles.

3.4.6 Landscape

The proposed project would include improved landscaping around the project site. Site improvements would include ornamental landscaping and benches, an outdoor event space, shade structures, hardscape areas, and utility upgrades. Additional outdoor uses would include a public event plaza and a staff outdoor area. During development of the project site, 38 heritage trees would need to be removed; these include Coast redwood and Raywood ash trees.

3.4.7 Utilities

The proposed project would include a pump house and production well, and communications tower. The production well and pump house would be located on the northern eastern portion of the project site within the secure surface parking lot.

The project would be designed as an all-electric building and would not include any natural gas usage.

3.4.8 Project Construction

The project is preliminarily scheduled to start in late 2025 and be completed in early 2028. The project would be completed in three development phases. In the first phase, the site would be prepared and selective demolition would occur to allow for construction of the proposed Public Safety Building; in the second phase, the Public Safety Building would be constructed; in the third phase, the remainder of the existing building would be removed and the proposed parking garage and shooting range would be developed.

Construction activities would include building and asphalt demolition, trenching for utilities, site preparation and rough grading, building construction, paving, and architectural coating. No pile driving, rock blasting, crushing or excavation would occur during the construction phase. Construction would take place from 7:00 a.m. to 4:00 p.m., Monday through Friday, as allowed by the Mountain View Municipal Code Section 8.70, *Construction Noise*. The active construction and staging areas would be on the project site.

3.5 INTENDED USES OF THE EIR

It is the intent of this Draft EIR to evaluate the environmental impacts of the proposed project, thereby enabling the City of Mountain View, other responsible agencies, and interested parties to make informed decisions with respect to the requested entitlements. This Draft EIR is a project-level Draft EIR that examines the environmental impacts of the proposed project. This Draft EIR also addresses various actions by the City and others to adopt and implement the proposed project.

3. Project Description

The Draft EIR is intended to disclose to the public, agencies, and decision makers the proposed project's details, analyses of the proposed project's potential environment impacts, and identification of feasible mitigation or alternatives that would lessen or reduce significant environmental impacts.

This Draft EIR will serve as the primary environmental document for all actions associated with the Mountain View Public Safety Building, including any discretionary approvals requested or required to implement the proposed project. The City of Mountain View is the lead agency under CEQA and has the principal approval authority over the proposed project.

In order to implement the proposed project, the City of Mountain View would issue the following permits and approvals:

- Certification of this EIR
- Permits required to implement the proposed project, including, but not limited to:
  - Demolition permit
  - Tree removal permit
  - Grading permit
  - Utility permits
  - Building permits
- Other agreements or actions of the City in furtherance of the proposed project

To approve the proposed project, the City of Mountain View City Council must first certify the Final EIR. The City Council will consider the information in the EIR when making its decision to approve or deny the proposed project, or in directing modifications to the proposed project in response to the EIR's findings and mitigation measures.

3. Project Description

This page has been intentionally left blank.

4. Environmental Analysis

Chapter 4 examines the environmental setting of the proposed project, analyzes its effects and the significance of its impacts, and recommends mitigation measures to reduce or avoid impacts. This chapter has a separate section for each environmental issue area that was determined to need further study in the EIR. This scope was determined in the initial study and notice of preparation (NOP), which were published December 2024 (see Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments*), and through public and agency comments received during the NOP comment period from December 10, 2024 to January 15, 2025. Environmental topics and their corresponding sections and abbreviations are:

- 4.1 Air Quality (AIR)
- 4.2 Biological Resources (BIO)
- 4.3 Cultural and Tribal Cultural Resources (CUL)
- 4.4 Geology and Soils (GEO)
- 4.5 Greenhouse Gas Emissions (GHG)
- 4.6 Hazards and Hazardous Materials (HAZ)
- 4.7 Noise (NOI)
- 4.8 Transportation (TRA)

Sections 4.1 through 4.8 provide a detailed discussion of the environmental setting, impacts associated with the proposed project, and mitigation measures designed to reduce significant impacts where required and when feasible. The residual impacts following the implementation of any mitigation measure are also discussed.

The initial study also determined that certain issues under an environmental topic would not be significantly affected by implementation of the project; these issues are not discussed further in this EIR.

ORGANIZATION OF ENVIRONMENTAL ANALYSIS

To assist the reader with comparing information between environmental issues, each section is organized under these major headings:

- **Regulatory Background** offers an overview of applicable laws, regulations, plans, and policies relevant to each environmental topic.

- **Existing Conditions** offers a description of the existing environmental conditions, providing a baseline against which the impacts of the proposed project can be compared.
- **Significance Criteria** refer to the quantitative or qualitative standards, performance levels, thresholds, or criteria used to evaluate whether an impact is significant. These standards are based primarily on the CEQA Guidelines unless otherwise noted.
- **Project Impact Analysis** provides a detailed discussion of the potential direct and indirect impacts of the proposed project. Mitigation measures are included as necessary.
- **Cumulative Impact Analysis** provides an overview of the geographic setting and cumulative projects considered in the cumulative impact assessment. Significant cumulative impacts are identified and mitigation measures are included as necessary.

LEVELS OF SIGNIFICANCE

The level of significance is identified for each impact in this Draft EIR. Although the criteria for determining significance are different for each topic area, the environmental analysis applies a uniform classification of the impacts based on definitions consistent with CEQA and the CEQA Guidelines:

- **No impact.** The project would result in no adverse effect on the environment.
- **Less than significant.** The project would not exceed the established significance criteria.
- **Significant.** The project would exceed the established significance criteria. For each significant impact, the EIR identifies mitigation measures to reduce, eliminate, or avoid the adverse effect. If one or more mitigation measures would reduce the impact to a less-than-significant level successfully, this is stated in the EIR.
- **Significant and unavoidable.** The project would exceed the established significance criteria, and no feasible mitigation measures are available to reduce the impact to a less-than-significant level.

CUMULATIVE IMPACTS

A cumulative impact consists of an impact created as a result of the combination of the project evaluated in the EIR, together with other reasonably foreseeable projects causing related impacts. CEQA Guidelines Section 15130 requires an EIR to discuss cumulative impacts of a project when the project's incremental effect is "cumulatively considerable." Cumulative effects could occur when future development under the project is combined with development in the surrounding area or, in some instances, in the entire region.

Pursuant to CEQA Guidelines Section 15130(a)(3), where a cumulative impact is significant when compared to baseline conditions, the analysis must address whether the project's

contribution to the significant cumulative impact is "considerable." If the contribution of the project is considerable, then the EIR must identify potentially feasible measures that could avoid or reduce the magnitude of the project's contribution to a less-than-considerable level. If the project's contribution is not considerable, it is considered less than significant and no mitigation for the project's contribution is required.

CEQA Guidelines Section 15130[b][1] states that the information used in the analysis of cumulative impacts should come from one or two sources:

A. A list of past, present, and probable future projects producing related cumulative impacts, including, if necessary, those projects outside the control of the agency; or

B. A summary of projections contained in an adopted local, regional, or statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative effect. Such plans may include: a general plan, regional transportation plan, or plans for the reduction of greenhouse gas emissions. A summary of projections may also be contained in an adopted or certified prior environmental document for such a plan. Such projections may be supplemented with additional information such as a regional modeling program. Any such document shall be referenced and made available to the public at a location specified by the lead agency.

The cumulative impact analyses in this EIR use method A and considers the two planning projects and 14 development projects listed in Table 4-1, *Cumulative Projects List*.

Table 4-1 Cumulative Projects List

Name/Location	Description	Status	Approximate Distance from Project Site
Downtown Precise Plan Comprehensive Update	Comprehensive update to 1988 Precise Plan	Planning Process in Progress	0 miles (adjacent to project site)
Moffett Boulevard Precise Plan	New Precise Plan	Planning Process in Progress	0.1 miles
333 Franklin Street	Residential projects with 14 housing units	Under Review	0.1 miles
701 West Evelyn Avenue	4-story commercial building with 6,500 square feet of retail space and 28,090 square feet of office space	Approved	0.2 miles
705 West Dana Street	3-story commercial building with 18,800 square feet of commercial, restaurant, and office space with parking	Approved	0.2 miles
City Lot 12 (West Side of Bryant Street between	5-story mixed-use development with 120 housing units and 2,300 square feet	Approved	0.2 miles

4. Environmental Analysis

Table 4-1 Cumulative Projects List

Mercy and California Streets)	of commercial space		
231-235 Hope Street	4-story residential development with 9 housing units	Under Construction	0.2 miles
747 West Dana Street	Commercial development with 7,000 square feet of office space and 1,600 square feet of retail space	Under Construction	0.2 miles
756 California Street	3-story commercial building with 6,997 square feet of retail and office space	Approved	0.3 miles
400 Moffett Boulevard	6-story residential development with 175 housing units; 2,373 square feet of commercial/retail space; 7,000 square feet of residential amenities; and parking	Under Review	0.4 miles
590 Castro Street	4-story office development with 105,255 square feet of office space and parking	Approved	0.4 miles
1265 Montecito Avenue	5-story residential development with 84 housing units and parking	Under Construction	0.4 miles
777 West Middlefield Road	Residential development with 716 housing units	Under Construction	0.5 miles
555 West Middlefield Road	Residential addition to add 323 housing units, a new amenity/leasing building, parking, and a public park	Approved	0.5 miles
969 Hope Street and 679 Fairmont Avenue	7-story residential project with 36 housing units and parking	Under Review	0.6 miles
881 Castro Street	8-story mixed-use development with 140 housing units; 13,352 square feet of commercial space; and below-grade parking	Under Review	0.6 miles

The cumulative discussions in Sections 4.1 through 4.8 explain the geographic scope of the area affected by each cumulative effect (e.g., immediate project vicinity, county, watershed, air basin), which depends on the environmental topic being analyzed. For example, in assessing macroscale air quality impacts, all development in the air basin contributes to regional emissions of criteria pollutants, and basinwide projections of emissions are the best tool for determining the cumulative impact. In assessing aesthetic impacts, on the other hand, only development in the local area of change would contribute to a cumulative visual effect because the area of change is only visible near that area.

4.1 AIR QUALITY

This section of the Draft Environmental Impact Report (EIR) describes the potential impacts to air quality due to adoption and implementation of the proposed project. This section describes the regulatory framework and existing conditions, identifies criteria used to determine impact significance, provides an analysis of the potential air quality impacts, and identifies feasible mitigation measures that could minimize any potentially significant impacts. This evaluation is based on the methodology recommended by the Bay Area Air District (Air District), formally the Bay Area Air Quality Management District, for project-level analyses. Cumulative impacts related to air quality are based on the regional boundaries of the San Francisco Bay Area Air Basin (SFBAAB). Criteria air pollutant emissions modeling is included in Appendix B, *Air Quality and Greenhouse Gas Emissions Data*, of this Draft Environmental Impact Report (EIR).

Terminology

The following are definitions for terms used throughout this chapter:

- **AAQS.** Ambient Air Quality Standards.
- **CES.** CalEnviroScreen. CES is a mapping tool that helps identify the California communities most affected by sources of pollution and where people are often especially vulnerable to pollution's effects.
- **Concentrations.** The amount of pollutant material per volumetric unit of air. Concentrations are measured in parts per million (ppm), parts per billion (ppb), or micrograms per cubic meter ($\mu g/m^3$).
- **Criteria Air Pollutants.** Air pollutants under the Federal Clean Air Act (carbon monoxide, nitrogen oxides, lead, sulfur oxides, ozone, and coarse and fine particulates).
- **DPM.** Diesel particulate matter.
- **Emissions.** The actual quantity of pollutant, measured in pounds per day or tons per year.
- **Impacted Community**. Unincorporated communities in Santa Clara County that are disproportionately burdened by pollution as defined by the County in the proposed General Plan using CES data.
- **Overburdened Community**. Defined by the Air District as an area located within a census tract identified by CES, Version 4, having an overall CES score at or above the 70th percentile, or located within 1,000 feet of any such census tract.
- **ppm.** Parts per million.
- **Sensitive receptor.** Land use types that are considered more sensitive to air pollution than others due to the types of population groups or activities involved. These land uses include residential, retirement facilities, hospitals, and schools.
- **TAC.** Toxic air contaminant.
- **$\mu g/m^3$.** Micrograms per cubic meter.
- **VMT.** Vehicle miles traveled.

4.1 Air Quality

AIR POLLUTANTS OF CONCERN

Criteria Air Pollutants

The pollutants emitted into the ambient air by stationary and mobile sources are categorized as primary and/or secondary pollutants. Primary air pollutants are emitted directly from sources. Carbon monoxide (CO), volatile organic compounds (VOC), nitrogen oxides (NO_X), sulfur dioxide (SO_2), coarse inhalable particulate matter (PM_{10}), fine inhalable particulate matter ($PM_{2.5}$), and lead (Pb) are primary air pollutants. Of these, CO, SO_2, NO_2, PM_{10}, and $PM_{2.5}$ are "criteria air pollutants," which means that AAQS have been established for them. VOC and NO_X are criteria pollutant precursors that form secondary criteria air pollutants through chemical and photochemical reactions in the atmosphere. Ozone (O_3) and nitrogen dioxide (NO_2) are the principal secondary pollutants. Table 4.1-1, *Criteria Air Pollutant Health Effects Summary*, summarizes the potential health effects associated with the criteria air pollutants.

Table 4.1-1 Criteria Air Pollutant Health Effects Summary

Pollutant	Health Effects	Examples of Sources
Carbon Monoxide (CO)	Chest pain in heart patients Headaches, nausea Reduced mental alertness Death at very high levels	Any source that burns fuel such as cars, trucks, construction and farming equipment, and residential heaters and stoves
Ozone (O_3)	Cough, chest tightness Difficulty taking a deep breath Worsened asthma symptoms Lung inflammation	Atmospheric reaction of organic gases with nitrogen oxides in sunlight
Nitrogen Dioxide (NO_2)	Increased response to allergens Aggravation of respiratory illness	Same as carbon monoxide sources
Particulate Matter (PM_{10} and $PM_{2.5}$)	Hospitalizations for worsened heart diseases Emergency room visits for asthma	Cars and trucks (particularly diesels) Fireplaces and woodstoves Windblown dust from overlays, agriculture,
Sulfur Dioxide (SO_2)	Aggravation of respiratory disease (e.g., asthma and emphysema) Reduced lung function	Combustion of sulfur-containing fossil fuels, smelting of sulfur-bearing metal ores, and industrial processes
Lead (Pb)	Behavioral and learning disabilities in children	Contaminated soil

Toxic Air Contaminants

People exposed to TACs at sufficient concentrations and durations may have an increased chance of getting cancer or experiencing other serious health effects. These health effects can include damage to the immune system as well as neurological, reproductive (e.g., reduced fertility), developmental, respiratory, and other health problems.[1] By the last update to the TAC list in December 1999, CARB had designated 244 compounds as TACs.[2] Additionally, CARB has implemented control measures for a number of compounds that pose high risks and show potential for effective control. There are no air quality standards for TACs. Instead, TAC impacts are evaluated by calculating the health risks associated with a given exposure. The majority of the estimated health risks from TACs can be attributed to relatively few compounds, the most relevant to the proposed project being particulate matter from diesel-fueled engines.

Diesel Particulate Matter

In 1998, CARB identified DPM as a TAC. Almost all diesel exhaust particles are 10 microns or less in diameter. Because of their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lungs. Long-term (chronic) inhalation of DPM is likely a lung cancer risk. Short-term (i.e., acute) exposure can cause irritation and inflammatory symptoms and may exacerbate existing allergies and asthma symptoms.[3]

Placement of New Sensitive Receptors

Because placement of sensitive land uses falls outside CARB's jurisdiction, CARB developed and approved the *Air Quality and Land Use Handbook: A Community Health Perspective* (2005) to address the siting of sensitive land uses in the vicinity of freeways, distribution centers, rail yards, ports, refineries, chrome-plating facilities, dry cleaners, and gasoline-dispensing facilities. This guidance document was developed to assess compatibility and associated health risks when placing sensitive receptors near existing pollution sources.

In 2017, CARB provided a supplemental technical advisory to the handbook for near-roadway air pollution exposure, *Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways.* Strategies include practices and technologies that reduce traffic emissions, increase dispersion of traffic pollution (or the dilution of pollution in the air), or remove pollution from the air.[4]

4.1 Air Quality

4.1.1 Regulatory Background

AAQS have been adopted at the State and federal levels for criteria air pollutants. In addition, both the State and federal government regulate the release of TACs. Land uses in the City of Mountain View are subject to the rules and regulations imposed by the Air District, the California AAQS adopted by CARB, and National AAQS adopted by the US Environmental Protection Agency (EPA). Federal, State, regional, and local laws, regulations, plans, or guidelines that are potentially applicable to the proposed project are summarized in this section.

FEDERAL AND STATE

Ambient Air Quality Standards

The Clean Air Act (CAA) allows states to adopt more stringent standards or include other pollutants. The California CAA requires all areas of the state to achieve and maintain the California AAQS by the earliest practical date. The California AAQS tend to be more restrictive than the National AAQS.

The National and California AAQS are the levels of air quality considered to provide a margin of safety in the protection of the public health and welfare. They are designed to protect "sensitive receptors" most susceptible to further respiratory distress, such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and persons engaged in strenuous work or exercise. Healthy adults can tolerate occasional exposure to air pollutant concentrations considerably above these minimum standards before adverse effects are observed.

Both California and the federal government have established health-based AAQS for seven air pollutants. These pollutants are ozone (O_3), nitrogen dioxide (NO_2), carbon monoxide (CO), sulfur dioxide (SO_2), coarse inhalable particulate matter (PM_{10}), fine inhalable particulate matter ($PM_{2.5}$), and lead (Pb). In addition, the State has set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles.

- California has also adopted a host of other regulations that reduce criteria pollutant emissions.
- AB 1493: Pavley Fuel Efficiency Standards.
- Heavy-Duty (Tractor-Trailer) Greenhouse Gas (GHG) Regulation.
- California Code of Regulations (CCR) Title 20: Appliance Energy Efficiency Standards.
- 24 CCR, Part 6: Building and Energy Efficiency Standards.
- 24 CCR, Part 11: Green Building Standards Code.

Tanner Air Toxics Act and Air Toxics Hot Spot Information and Assessment Act

Public exposure to TACs is a significant environmental health issue in California. The California Health and Safety Code defines a TAC as "an air pollutant which may cause or contribute to an increase in mortality or in serious illness, or which may pose a present or potential hazard to human health" (17 CCR Section 93000). A substance that is listed as a hazardous air pollutant pursuant to Section 112(b) of the federal CAA (42 US Code Section 7412[b]) is a TAC. Under State law, the California EPA, acting through CARB, is authorized to identify a substance as a TAC if it is an air pollutant that may cause or contribute to an increase in mortality or serious illness, or may pose a present or potential hazard to human health.

California regulates TACs primarily through Assembly Bill (AB) 1807 (Tanner Air Toxics Act) and AB 2588 (Air Toxics "Hot Spot" Information and Assessment Act of 1987). The Tanner Air Toxics Act set up a formal procedure for CARB to designate substances as TACs. Once a TAC is identified, CARB adopts an "airborne toxics control measure" for sources that emit that TAC. If there is a safe threshold for a substance (i.e., a point below which there is no toxic effect), the control measure must reduce exposure to below that threshold. If there is no safe threshold, the measure must incorporate "toxics best available control technology" to minimize emissions. To date, CARB has established formal control measures for 11 TACs that are identified as having no safe threshold.

Under AB 2588, TAC emissions from individual facilities are quantified and prioritized by the air quality management district or air pollution control district. High-priority facilities are required to perform a health risk assessment, and if specific thresholds are exceeded, are required to communicate the results to the public through notices and public meetings.

CARB has promulgated the following specific rules to limit TAC emissions:

- **13 CCR Chapter 10 Section 2485: Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling**. Generally restricts on-road diesel-powered commercial motor vehicles with a gross vehicle weight rating of greater than 10,000 pounds from idling more than five minutes.
- **13 CCR Chapter 10 Section 2480:** Airborne Toxic Control Measure to Limit School Bus Idling and Idling at Schools. Generally restricts a school bus or transit bus from idling for more than five minutes when within 100 feet of a school.
- **13 CCR Section 2477 and Article 8:** Airborne Toxic Control Measure for In-Use Diesel-Fueled Transport Refrigeration Units (TRU) and TRU Generator Sets and Facilities Where TRUs Operate. Regulations established to control emissions associated with diesel-powered TRUs.

4.1 Air Quality

REGIONAL

Bay Area Air District

The Air District is the agency responsible for ensuring that the National and California AAQS are attained and maintained in the SFBAAB. Air quality conditions in the SFBAAB have improved significantly since the Air District was created in 1955. The Air District prepares air quality management plans (AQMP) to attain AAQS in the SFBAAB. The Air District prepares ozone attainment plans for the National O_3 standard and clean air plans for the California O_3 standard. The Air District prepares these AQMPs in coordination with Association of Bay Area Governments (ABAG) and the Metropolitan Transportation Commission (MTC) to ensure consistent assumptions about regional growth.

Bay Area Air District 2017 Clean Air Plan

The Air District adopted the 2017 "Clean Air Plan: Spare the Air, Cool the Climate" (2017 Clean Air Plan) on April 19, 2017, making it the most recently adopted comprehensive plan. The 2017 Clean Air Plan incorporates significant new scientific data, primarily in the form of updated emissions inventories, ambient measurements, new meteorological episodes, and new air quality modeling tools. The 2017 Clean Air Plan serves as an update to the adopted Bay Area 2010 Clean Air Plan and continues to provide the framework for SFBAAB to achieve attainment of the California and National AAQS. The 2017 Clean Air Plan updates the Bay Area's ozone plan, which is based on the "all feasible measures" approach to meet the requirements of the California CAA. It sets a goal of reducing health risk impacts to local communities by 20 percent between 2015 and 2020 and lays the groundwork for reducing GHG emissions in the Bay Area to meet the State's 2030 GHG reduction target and 2050 GHG reduction goal. It also includes a vision for the Bay Area in a post-carbon year 2050 that encompasses the following:

- Construct buildings that are energy efficient and powered by renewable energy.
- Walk, bicycle, and use public transit for the majority of trips and use electric-powered autonomous public transit fleets.
- Incubate and produce clean energy technologies.
- Live a low-carbon lifestyle by purchasing low-carbon foods and goods in addition to recycling and putting organic waste to productive use.

A comprehensive multipollutant control strategy was developed to be implemented in the next three to five years to address public health and climate change and to set a pathway to achieve the 2050 vision. The control strategy includes 85 control measures to reduce emissions of ozone, particulate matter, TACs, and GHG from a full range of emission sources. These control measures cover the following sectors: (1) stationary (industrial) sources, (2) transportation, (3)

energy, (4) agriculture, (5) natural and working lands, (6) waste management, (7) water, (8) super-GHG pollutants, and (9) buildings.

- The proposed control strategy is based on the following key priorities:
- Reduce emissions of criteria air pollutants and TACs from all key sources.
- Reduce emissions of "super-GHGs" such as methane, black carbon, and fluorinated gases.
- Decrease demand for fossil fuels (gasoline, diesel, and natural gas).
  - Increase efficiency of the energy and transportation systems.
  - Reduce demand for vehicle travel, and high-carbon goods and services.
- Decarbonize the energy system.
  - Make the electricity supply carbon-free.
  - Electrify the transportation and building sectors.[5]

Community Air Risk Evaluation Program

The Air District's Community Air Risk Evaluation (CARE) program was initiated in 2004 to evaluate and reduce health risks associated with exposure to outdoor TACs in the Bay Area, primarily DPM. The last update to this program was in 2014. Based on findings of the latest report, DPM was found to account for approximately 85 percent of the cancer risk from airborne toxics. Carcinogenic compounds from gasoline-powered cars and light duty trucks were also identified as significant contributors: 1,3-butadiene contributed 4 percent of the cancer risk-weighted emissions, and benzene contributed 3 percent. Collectively, five compounds—DPM, 1,3-butadiene, benzene, formaldehyde, and acetaldehyde—were found to be responsible for more than 90 percent of the cancer risk attributed to emissions. All of these compounds are associated with emissions from internal combustion engines. The most important sources of cancer risk-weighted emissions were combustion-related sources of DPM, including on-road mobile sources (31 percent), construction equipment (29 percent), and ships and harbor craft (13 percent). Overall, cancer risk from TAC dropped by more than 50 percent between 2005 and 2015, when emissions inputs accounted for State diesel regulations and other reductions.

The major contributor to acute and chronic non-cancer health effects in the Air District is acrolein (C_3H_4O). Major sources of acrolein are on-road mobile sources and aircraft near freeways and commercial and military airports. Currently CARB does not have certified emission factors or an analytical test method for acrolein. Since the appropriate tools needed to implement and enforce acrolein emission limits are not available, the Air District does not conduct health risk screening analysis for acrolein emissions.

[5] Bay Area Air District, April 19, 2017, Final 2017 Clean Air Plan. Spare the Air Cool the Climate, A Blueprint for Clean Air and Climate Protection in the Bay Area, https://www.baaqmd.gov/~/media/files/planning-and-research/plans/2017-clean-air-plan/attachment-a_-proposed-final-cap-vol-1-pdf.pdf?rev=8c588738a4fb455b9cabb27360409529&sc_lang=en, accessed on May 20, 2024.

4.1 Air Quality

Assembly Bill 617 Community Action Plans

AB 617 develops a new community-focused program to reduce exposure more effectively to air pollution and preserve public health in environmental justice communities. AB 617 directs CARB and all local air districts to take measures to protect communities disproportionally impacted by air pollution through monitoring and implementing air pollution control strategies.

On September 27, 2018, CARB approved the Air District's recommended communities for monitoring and emission reduction planning. The State approved communities for year 1 of the program as well as communities that would move forward over the next five years. Bay Area recommendations included all the CARE areas, areas with large sources of air pollution (e.g., refineries, seaports, and airports), areas identified via statewide screening tools as having pollution and/or health burden vulnerability, and areas with low life expectancy.[6]

Bay Area Air District Rules and Regulations

Regulation 7, Odorous Substances

Sources of objectionable odors may occur within the unincorporated county. The Air District's Regulation 7, Odorous Substances, places general limitations on odorous substances and specific emission limitations on certain odorous compounds. Odors are also regulated under Air District Regulation 1, Rule 1-301, *Public Nuisance*, which states that "no person shall discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance or annoyance to any considerable number of persons or the public; or which endangers the comfort, repose, health or safety of any such persons or the public, or which causes, or has a natural tendency to cause, injury or damage to business or property." Under the Air District's Rule 1-301, a facility that receives three or more violation notices within a 30-day period can be declared a public nuisance.

Other Bay Area Air District Regulations

In addition to the plans and programs described above, the Air District administers a number of specific regulations on various sources of pollutant emissions that would apply to the proposed project:

- Regulation 2, Rule 2, Permits, New Source Review
- Regulation 2, Rule 5, New Source Review of Toxic Air Contaminants
- Regulation 2, Rule 6, Permits, Major Facility Review
- Regulation 6, Rule 1, General Requirements
- Regulation 6, Rule 2, Commercial Cooking Equipment
- Regulation 8, Rule 3, Architectural Coatings

- Regulation 8, Rule 4, General Solvent and Surface Coatings Operations
- Regulation 11, Rule 2, Asbestos, Demolition, Renovation and Manufacturing

Plan Bay Area 2050

MTC and ABAG adopted Plan Bay Area 2050 on October 21, 2021.[7] Plan Bay Area provides transportation and environmental strategies to continue to meet the regional transportation-related GHG reduction goals of SB 375, which is described in Section 4.5, *Greenhouse Gas Emissions*, of this Draft EIR. Strategies to reduce GHG emissions include focusing housing and commercial construction in walkable, transit-accessible places; investing in transit and active transportation; and shifting the location of jobs to encourage shorter commutes. To achieve MTC's/ABAG's sustainable vision for the Bay Area, the Plan Bay Area land use concept plan for the region concentrates the majority of new population and employment growth in the region in Priority Development Areas (PDAs). PDAs are transit-oriented, infill development opportunity areas within existing communities. An overarching goal of the regional plan is to concentrate development in areas where there are existing services and infrastructure rather than allocate new growth to outlying areas where substantial transportation investments would be necessary to achieve the per capita passenger vehicle, VMT, and associated GHG emissions reductions.

LOCAL

Valley Transportation Authority 2021 Congestion Management Program Document

The Valley Transportation Authority (VTA) Congestion Management Program (CMP) aims to adopt transportation improvement programs for Santa Clara County.[8] The CMP provides a roadmap to reduce congestion, land use decision-making and air quality programs among local jurisdictions. The 2021 update also documents changes to VTA's Transportation Demand Program (TDM), regional planning efforts by ABAG and MTC, and future updates to the Multimodal Improvement Plan (MIP). Consistent with State law and the MTC's Regional Transportation Plan, the CMP contains a performance element to evaluate current and future multi-modal system performances, a seven-year capital improvement program (CIP), a program to analyze the impacts of land use decisions, and a travel demand element to promote more transportation alternatives. In addition, VTA's updated CMP includes multi-modal performance standards and trip reduction and transportation demand management strategies consistent with the goal of reducing regional vehicle miles traveled in accordance with Senate Bill 375. The 2021 CMP also includes a discussion of Senate Bill 743 implementation and relationship to the CMP auto LOS standard.

4.1 Air Quality

Mountain View Code of Ordinances

The Mountain View Code of Ordinances includes various directives to minimize adverse impacts to air quality in the city of Mountain View. The following Ordinances would apply to the proposed project that would reduce air quality impacts:

- Section 8.20.12, *Subsection 101.10.1.2.2 added*, adopts the green building standards for nonresidential new construction. All nonresidential new construction must comply with the following:
  - The mandatory measures of the 2022 California Green Building Standards Code and City of Mountain View Reach Code as modified.
  - Shall meet the intent of LEED ® Gold certified;
  - Shall meet the parking requirements per Table 101.10 and Table A5.106.5.3.2;
  - Shall demonstrate energy compliance to meet or exceed Title 24, Part 6.
- Section 8.20.14, *Table 101.10 added*, adopts applicable California Green Building Standards Code.

Section 8.20.14, *Subsection 5.106.5.3.2 amended and Table 5.106.5.3.2 added*, adopts and amends applicable Tier 2 CALGreen electric vehicle (EV) parking standards.

4.1.2 Existing Conditions

SAN FRANCISCO BAY AREA AIR BASIN CONDITIONS

California is divided geographically into air basins for the purpose of managing the air resources of the State on a regional basis. An air basin generally has similar meteorological and geographic conditions throughout. The State is divided into 15 air basins, and the City of Mountain View is in the SFBAAB. The discussion below identifies the natural factors in the Air Basin that affect air pollution. Air pollutants of concern are criteria air pollutants and TACs. Federal, State, and local air districts have adopted laws and regulations intended to control and improve air quality.

The Air District is the regional air quality agency for the SFBAAB, which comprises all of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, and Santa Clara Counties; the southern portion of Sonoma County; and the southwestern portion of Solano County. Air quality in this area is determined by such natural factors as topography, meteorology, and climate, in addition to the presence of existing air pollution sources and ambient conditions.[9]

[9] Bay Area Air District, May 2017, California Environmental Quality Act Air Quality Guidelines, http://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa_guidelines_may2017-pdf, accessed on May 20, 2024.

4.1 Air Quality

Meteorology

The SFBAAB is characterized by complex terrain, consisting of coastal mountain ranges, inland valleys, and bays, which distort normal wind flow patterns. The Coast Range[10] splits in the Bay Area, creating a western coast gap, the Golden Gate, and an eastern coast gap, the Carquinez Strait, which allows air to flow in and out of the Bay Area and the Central Valley. The climate is dominated by the strength and location of a semi-permanent, subtropical high-pressure cell. During the summer, the Pacific high-pressure cell is centered over the northeastern Pacific Ocean, resulting in stable meteorological conditions and a steady northwesterly wind flow. Upwelling of cold ocean water from below the surface because of the northwesterly flow produces a band of cold water off the California coast. The cool and moisture-laden air approaching the coast from the Pacific Ocean is further cooled by the presence of the cold-water band, resulting in condensation and the presence of fog and stratus clouds along the Northern California coast. In the winter, the Pacific high-pressure cell weakens and shifts southward, resulting in wind flow offshore, the absence of upwelling, and the occurrence of storms. Weak inversions coupled with moderate winds result in a low air pollution potential.

Wind Patterns

During the summer, winds flowing from the northwest are drawn inland through the Golden Gate and over the lower portions of the San Francisco Peninsula. Immediately south of Mount Tamalpais in Marin County, the northwesterly winds accelerate considerably and come more directly from the west as they stream through the Golden Gate. This channeling of wind through the Golden Gate produces a jet that sweeps eastward and splits off to the northwest toward Richmond and to the southwest toward San José when it meets the East Bay hills. Wind speeds may be strong locally in areas where air is channeled through a narrow opening, such as the Carquinez Strait, the Golden Gate, or the San Bruno gap.

The air flowing in from the coast to the Central Valley, called the sea breeze, begins developing at or near ground level along the coast in late morning or early afternoon and the sea breeze deepens and increases in velocity while spreading inland. Under normal atmospheric conditions, the air in the lower atmosphere is warmer than the air above it. In the winter, the SFBAAB frequently experiences stormy conditions with moderate to strong winds, as well as periods of stagnation with very light winds. Winter stagnation episodes (i.e., conditions where there is little mixing, which occurs when there is a lack of or little wind) are characterized by nighttime drainage flows in coastal valleys. Drainage is a reversal of the usual daytime air-flow patterns; air moves from the Central Valley toward the coast and back down toward the Bay from the smaller valleys within the SFBAAB.

[10] The Coast Range traverses California's west coast from Humboldt County to Santa Barbara County.

4.1 Air Quality

Temperature

Summertime temperatures in the Air Basin are determined in large part by the effect of differential heating between land and water surfaces. Because land tends to heat up and cool off more quickly than water, a large-scale gradient (differential) in temperature is often created between the coast and the Central Valley, and small-scale local gradients are often produced along the shorelines of the ocean and bays. The temperature gradient near the ocean is also exaggerated, especially in summer, because of the upwelling of cold water from the ocean bottom along the coast. On summer afternoons, the temperatures at the coast can be 35 degrees Fahrenheit (°F) cooler than temperatures 15 to 20 miles inland; at night, this contrast usually decreases to less than 10°F. In the winter, the relationship of minimum and maximum temperatures is reversed. During the daytime the temperature contrast between the coast and inland areas is small, whereas at night the variation in temperature is large.

Precipitation

The Air Basin is characterized by moderately wet winters and dry summers. Winter rains (November through March) account for about 75 percent of the average annual rainfall. The amount of annual precipitation can vary greatly from one part of the Air Basin to another, even within short distances. In general, total annual rainfall can reach 40 inches in the mountains, but it is often less than 16 inches in sheltered valleys.

During rainy periods, ventilation (rapid horizontal movement of air and injection of cleaner air) and vertical mixing (an upward and downward movement of air) are usually high, and thus pollution levels tend to be low (i.e., air pollutants are dispersed more readily into the atmosphere rather than accumulate under stagnant conditions). However, during the winter, frequent dry periods do occur, where mixing and ventilation are low and pollutant levels build up.

Wind Circulation

Low wind speed contributes to the buildup of air pollution because it allows more pollutants to be emitted into the air mass per unit of time. Light winds occur frequently during periods of low sun (fall and winter, and early morning) and at night. These are also periods when air pollutant emissions from some sources are at their peak, namely, commuter traffic (early morning) and wood-burning appliances (nighttime). The problem can be compounded in valleys, when weak flows carry the pollutants up-valley during the day, and cold air drainage flows move the air mass down-valley at night. Such restricted movement of trapped air provides little opportunity for ventilation and leads to buildup of pollutants to potentially unhealthful levels.

Inversions

An inversion is a layer of warmer air over a layer of cooler air. Inversions affect air quality conditions significantly because they influence the mixing depth (i.e., the vertical depth in the atmosphere available for diluting air contaminants near the ground). There are two types of inversions that occur regularly in the SFBAAB. Elevation inversions[11] are more common in the summer and fall, and radiation inversions[12] are more common during the winter. The highest air pollutant concentrations in the SFBAAB generally occur during inversions.

ATTAINMENT STATUS OF THE SFBAAB

The AQMP provides the framework for air quality basins to achieve attainment of the State and federal AAQS through the State Implementation Plan. Areas that meet AAQS are classified attainment areas, and areas that do not meet these standards are classified nonattainment areas. Severity classifications for O_3 range from marginal, moderate, and serious to severe and extreme.

- **Unclassified:** A pollutant is designated unclassified if the data are incomplete and do not support a designation of attainment or nonattainment.
- **Attainment:** A pollutant is in attainment if the AAQS for that pollutant was not violated at any site in the area during a three-year period.
- **Nonattainment:** A pollutant is in nonattainment if there was at least one violation of an AAQS for that pollutant in the area.
- **Nonattainment/Transitional:** A subcategory of the nonattainment designation. An area is designated nonattainment/transitional to signify that the area is close to attaining the AAQS for that pollutant.

The attainment status for the SFBAAB is shown in Table 4.1-2, *Attainment Status of Criteria Pollutants in the San Francisco Bay Area Air Basin.* The SFBAAB is currently designated a nonattainment area for California and National O_3, California and National $PM_{2.5}$, and California PM_{10} AAQS.

[11] When the air blows over elevated areas, it is heated as it is compressed into the side of the hill/mountain. When that warm air comes over the top, it is warmer than the cooler air of the valley.

[12] During the night, the ground cools off, radiating the heat to the sky.

4.1 Air Quality

Table 4.1-2 Attainment Status of Criteria Air Pollutants in the San Francisco Bay Area Air Basin

Pollutant	State	Federal
Ozone – 1-hour	Nonattainment	Classification revoked (2005)
Ozone – 8-hour	Nonattainment (serious)	Nonattainment (marginal) [1]
PM_{10}	Nonattainment	Unclassified/Attainment [2]
$PM_{2.5}$	Nonattainment	Unclassified/Attainment
CO	Attainment	Attainment
NO_2	Attainment	Unclassified
SO_2	Attainment	Attainment
Lead	Attainment	Attainment
Sulfates	Attainment	Unclassified/Attainment
All others	Unclassified/Attainment	Unclassified/Attainment

Source: California Air Resources Board, 2024, Maps of State and Federal Area Designations, https://ww2.arb.ca.gov/resources/documents/maps-state-and-federal-area-designations, accessed on May 13, 2024.
Notes:
1. Severity classification as of February 13, 2017.
2. In December 2014, US EPA issued final area designations for the 2012 primary annual PM2.5 National AAQS. Areas designated "unclassifiable/attainment" must continue to take steps to prevent their air quality from deteriorating to unhealthy levels. The effective date of this standard is April 15, 2015.

EXISTING AMBIENT AIR QUALITY

Existing levels of ambient air quality and historical trends and projections in the county are best documented by measurements taken by the Air District. The Air District has 30 permanent monitoring stations around the Bay Area. The nearest station is the Redwood City Monitoring Station, which monitors O_3, NO_2, and $PM_{2.5}$. Redwood City does not monitor PM_{10}, therefore, the nearest station for and PM_{10} is the San José-Jackson Street monitoring station. Data from this monitoring station is summarized in Table 4.1-3, *Ambient Air Quality Monitoring Summary*. The data show that the area regularly exceeds the State and federal one-hour, eight-hour O_3 standards and federal $PM_{2.5,}$ and occasionally exceeds the State and federal PM_{10} in the last three recorded years.

Table 4.1-3 Ambient Air Quality Monitoring Summary

Pollutant/Standard [a]	Number of Days Thresholds Were Exceeded and Maximum Levels		
	2020	2021	2022
Ozone (O_3) [a]			
State 1-Hour ≥ 0.09 ppm (days exceed threshold)	1	0	0
State & Federal 8-hour ≥ 0.070 ppm (days exceed threshold)	1	0	0
Max. 1-Hour Conc. (ppm)	0.098	0.085	0.079
Max. 8-Hour Conc. (ppm)	0.078	0.064	0.062
Nitrogen Dioxide (NO_2) [a]			
State 1-Hour ≥ 0.18 ppm (days exceed threshold)	0	0	0
Federal 1-Hour ≥ 0.100 ppm (days exceed threshold)	0	0	0
Max. 1-Hour Conc. (ppm)	0.046	0.041	0.044
Coarse Particulates (PM_{10}) [b]			
State 24-Hour > 50 µg/m^3 (days exceed threshold)	10	0	0
Federal 24-Hour > 150 µg/m^3 (days exceed threshold)	0	0	0
Max. 24-Hour Conc. (µg/m^3)	137.1	45.1	44.5
Fine Particulates ($PM_{2.5}$) [a]			
Federal 24-Hour > 35 µg/m^3 (days exceed threshold)	9	0	0
Max. 24-Hour Conc. (µg/m^3)	124.1	30.1	27.4

Notes: ppm = parts per million; ppb = parts per billion; µg/m^3 = micrograms per cubic meter; * = Data not available
a. Data for O_3, NO_2 and $PM_{2.5}$ obtained from the Redwood City Monitoring Station.
b. Data for PM_{10} obtained from the San José-Jackson Street Monitoring Station.

Sensitive Receptors

Some land use types are considered more sensitive to air pollution than others due to the types of population groups or activities involved. Sensitive population groups include children, the elderly, the acutely ill, and the chronically ill, especially those with cardiorespiratory diseases. The Air District defines sensitive receptors as "Facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples include schools, hospitals and residential areas".[13]

[13] Bay Area Air District, April 2023, California Environmental Quality Act Air Quality Guidelines, https://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/updated-ceqa-guidelines.

4.1 Air Quality

Residential areas are also considered sensitive receptors to air pollution because residents (including children and the elderly) tend to be at home for extended periods of time, resulting in sustained exposure to any pollutants present. Other sensitive receptors include retirement facilities, hospitals, and schools. Recreational land uses are considered moderately sensitive to air pollution. Although exposure periods are generally short, exercise places a high demand on respiratory functions, which can be impaired by air pollution. In addition, noticeable air pollution can detract from the enjoyment of recreation. Industrial, commercial, retail, and office areas are considered the least sensitive to air pollution. Exposure periods are relatively short and intermittent, as the majority of the workers tend to stay indoors most of the time. In addition, the working population is generally the healthiest segment of the public.

Existing Emissions

The project site hosts the existing Mountain View Police Department on approximately 4.3 acres. As shown on Figure 3-2, *Aerial Photograph*, the project site is currently occupied by the Mountain View Police Department building, a 42-stall parking lot, a pump station, and a K-9 training area. As such, operations of the existing project site generate criteria air pollutants through the use of vehicles and on-site equipment, building natural gas consumption, and periodic application of paints and coatings.

4.1.3 Significance Criteria

The Initial Study prepared for this Draft EIR (see Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments*) identified that the proposed project would not result in a significant impact for the following significance criterion:

> Would the project conflict with or obstruct implementation of the applicable air quality plan?

The proposed project would have a significant impact under Appendix G, *Environmental Checklist Form*, of the California Environmental Quality Act (CEQA) Guidelines if it would:

a) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard.

b) Expose sensitive receptors to substantial pollutant concentrations.

c) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

4.1.4 Project Impact Analysis

The following impact analysis addresses thresholds of significance for which the Initial Study disclosed potentially significant impacts.

a) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

The Air District has identified thresholds of significance for criteria pollutant emissions and criteria air pollutant precursors, including ROG, NO_X, CO, PM_{10}, and fine $PM_{2.5}$. Development projects below these significant thresholds are not expected to generate sufficient criteria air pollutant emissions to violate any AAQS or contribute substantially to an existing or projected air quality violation.

Regional Short-Term Construction Impacts

Construction activities produce combustion emissions from various sources, such as on-site heavy-duty construction vehicles, vehicles hauling materials to and from the site, and motor vehicles transporting the construction crew. Demolition and site preparation activities produce fugitive dust emissions (PM_{10} and $PM_{2.5}$). Air pollutant emissions from construction activities on site would vary daily as construction activity levels change. Construction activities associated with the project would result in emissions of ROG, NO_X, CO, PM_{10}, and fine $PM_{2.5}$.

Construction Fugitive Dust

Ground-disturbing activities during construction would generate fugitive dust (PM_{10} and $PM_{2.5}$). The amount of dust generated during construction would be highly variable and would be dependent on the amount, type, and moisture content of material being disturbed, as well as on meteorological conditions. If uncontrolled, PM_{10} and $PM_{2.5}$ levels downwind of actively disturbed areas could possibly exceed State standards, which would be a **significant** impact.

Impact AIR-1: Without mitigation, construction activities for the proposed project could generate fugitive dust that exceeds State standards.

> **Mitigation Measure AIR-1:** The project contractor shall comply with the Bay Area Air District's basic best management practices for reducing construction-related emissions of uncontrolled fugitive dust (coarse inhalable particulate matter [PM_{10}] and fine inhalable particulate matter [$PM_{2.5}$]):
>
> - All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.

4.1 Air Quality

- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt trackout onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 miles per hour.
- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measures Title 13, Section 2485, of the California Code of Regulations). Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
- All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 miles per hour.
- All trucks and equipment, including their tires, shall be washed off prior to leaving the site.
- Unpaved roads providing access to sites located 100 feet or further from a paved road shall be treated with a 6- to 12-inch layer of compacted layer of wood chips, mulch, or gravel.
- Publicly visible signs shall be posted with the telephone number and name of the person to contact at the City regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's General Air Pollution Complaints number shall also be visible to ensure compliance with applicable regulations.

These measures shall be noted on grading plans prepared by the applicant submitted to the City of Mountain View Building Division. The construction contractor shall implement these measures during ground disturbing activities. The City shall verify compliance that these measures have been implemented during normal construction site inspections.

Significance with Mitigation: Less than significant.

Construction Exhaust Emissions

Because the proposed project would involve demolition activities for the removal of the existing building and surface parking, the Air District construction screening criteria cannot be used for analyzing potential air quality impacts resulting from construction of the proposed project. Therefore, a quantified analysis of the proposed project's construction emissions was conducted using the California Emissions Estimator Model (CalEEMod) Version 2022.1 based on information provided by the City of Mountain View and default equipment mix for each construction activity during the approximately 30-month construction period.

Potential construction-related air quality impacts are determined by comparing the average daily criteria air pollutants emissions generated by the proposed project-related construction activities to the Air District significance thresholds in Table 4.1-4, *Construction-Related Criteria Air Pollutant Emissions Estimates*. Average daily emissions are based on the annual construction emissions divided by the total number of active construction days. As shown in Table 4.1-4, criteria air pollutant emissions from construction equipment exhaust would not exceed the Air District average daily thresholds. Therefore, impacts from project-related construction activities to the regional air quality would be **less than significant**.

Table 4.1-4 Construction-Related Criteria Air Pollutant Emissions Estimates

Year	Criteria Air Pollutants (tons/year) [a]					
	ROG	**NO_X**	**Fugitive PM_{10} [b]**	**Exhaust PM_{10}**	**Fugitive $PM_{2.5}$ [b]**	**Exhaust $PM_{2.5}$ [b]**
1	<1	2	<1	<1	<1	<1
2	<1	1	<1	<1	<1	<1

Exceeds Average Daily Threshold	**No**	**No**	**N/A**	**No**	**N/A**	**No**

4.1 Air Quality

Table 4.1-4 Construction-Related Criteria Air Pollutant Emissions Estimates

Year	Criteria Air Pollutants (tons/year) [a]					
	ROG	NO_X	Fugitive PM_{10} [b]	Exhaust PM_{10}	Fugitive $PM_{2.5}$ [b]	Exhaust $PM_{2.5}$ [b]

Source: California Air Pollution Control Officer's Association, April 2022, CalEEMod, California Emissions Estimator Model User Guide, Version 2022.1, https://www.caleemod.com/user-guide. See Appendix B, *Air Quality and Greenhouse Gas Emissions Data*.

Notes: Emissions may not total to 100 percent due to rounding. BMP = Best Management Practices; N/A = not applicable

a. Construction phasing and equipment mix are based on the preliminary information provided by the project applicant. Where specific information regarding project-related construction activities was not available, construction assumptions were based on CalEEMod defaults, which are based on construction surveys conducted by South Coast Air Quality Management District of construction equipment and phasing for comparable projects.

b. Includes implementation of BMPs for fugitive dust control required by the Air District as mitigation, including watering disturbed areas a minimum of two times per day and reducing speed limit to 25 miles per hour on unpaved surfaces.

c. Average daily emissions are based on the total construction emissions divided by the total number of active construction days. The total number of construction days is estimated to be about 654 days.

Operational Impacts

Typical long-term air pollutant emissions are generated by area sources (e.g., landscape fuel use, aerosols, architectural coatings, and asphalt pavement), energy use (natural gas), and mobile sources (i.e., on-road vehicles). Emissions would also be generated from the shooting range; however, those emissions are anticipated to be highly controlled using high-efficiency indoor air filters due to their potential to contain lead. The primary source of long-term criteria air pollutant emissions generated by the proposed project would be emissions produced from project-generated vehicle trips. The proposed project would generate 602 daily vehicle trips, constituting an estimated increase of 88 new daily vehicle trips beyond existing conditions. Table 4.1-5, *Operational Criteria Air Pollutant Emissions Estimates*, identifies the criteria air pollutant emissions associated with the proposed project. It should be noted that the emission estimates herein do not reflect the net increase in emissions because they do not account for existing emissions that are already generated from operation of the existing site. As such, the emissions impact analysis herein is a conservative assessment of potential air quality impacts resulting from the proposed project.

Table 4.1-5 Operational Criteria Air Pollutant Emissions Estimates

Category	Criteria Air Pollutants (average lbs/day)			
	ROG	NO_X	PM_{10}	$PM_{2.5}$
Proposed Land Use 2024 Emissions				
Area	3	<1	<1	<1
Energy (natural gas)	-	-	-	-
On-Road Mobile	2	2	4	1
Total	*5*	*2*	*4*	*1*
Air District Thresholds	**54**	**54**	**82**	**54**
Exceed Threshold?	**No**	**No**	**No**	**No**

Source: Appendix B, *Air Quality and Greenhouse Gas Emissions Data*.

As shown in Table 4.1-6, the proposed project would not exceed the Air District's recommended operational criteria air pollutant emissions thresholds. As such, potential impacts resulting from operation of the proposed project would be **less than significant**.

b) Would the proposed project expose sensitive receptors to substantial pollutant concentrations?

The proposed project could expose sensitive receptors to elevated pollutant concentrations if it would cause or contribute significantly to elevated pollutant concentration levels. Unlike regional emissions, localized emissions are typically evaluated in terms of air concentration rather than mass, so they can be more readily correlated to potential health effects.

Localized Short-Term Construction Impacts

The proposed project would elevate concentrations of TACs and fugitive dust in the vicinity of sensitive land uses (i.e., sensitive receptors) during construction activities. Because the proposed project would result in the operation of diesel-fueled construction equipment during project construction, diesel particulate matter (DPM) is the TAC of concern for this analysis. The nearest receptors to the project site include adjacent residents, students at Mountain View Academy approximately 785 feet southeast of the project site, and students at Khan Lab School adjacent to the western project boundary. Construction activities would occur near these sensitive receptor locations. Consequently, an HRA of DPM and $PM_{2.5}$ concentration was prepared for the proposed project and is included in Appendix B, *Air Quality and Greenhouse Gas Emissions Data*, of this Draft EIR. Results of the analysis are shown in Table 4.1-6, *Construction Health Risk Assessment Results – Unmitigated*.

4.1 Air Quality

Table 4.1-6 Construction Health Risk Assessment Results – Unmitigated

Receptor	Project Level Risk [a]		
	Cancer Risk (per million)	Chronic Hazards [b]	Maximum Annual Average PM2.5 Concentration (µg/m3) [a,b]
MER – Resident	**70**	0.1	0.1
MER – Worker	1	<0.1	<0.1
MER – K-12 Student	8	0.1	0.1
Air District Threshold	**10**	**1.0**	**0.3**
Exceeds Threshold?	**Yes**	**No**	**No**

Notes: MER = maximally exposed resident.
Cancer risk calculated using the 2015 Office of Environmental Health Hazard Assessment Health Risk Assessment guidance (Office of Environmental Health Hazard Assessment, February 2015, Air Toxics Hot Spots Program Guidance Manual for the Preparation of Health Risk Assessments, https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf)
a. Construction phasing is based on the preliminary information provided by the City of Mountain View. Where specific information regarding project-related construction activities was not available, construction assumptions were based on CalEEMod defaults, which are based on construction surveys conducted by South Coast Air Quality Management District of construction equipment and phasing for comparable projects.
b. Chronic Hazard is derived by dividing the pollutant (DPM; PM_{10} Exhaust) maximum annual average concentration by 5; however, the maximum annual average $PM_{2.5}$ concentration shown in this table reflects $PM_{2.5}$ Total ($PM_{2.5}$ Exhaust and $PM_{2.5}$ Dust).

Cancer risk for the residential maximally exposed resident (MER) from project-related construction emissions was calculated to be approximately 70 in one million, which would exceed the 10-in-one-million significance threshold. Cancer risk for the worker and K-12 student receptors were calculated to be approximately 1 and 8 in one million, respectively, which would not exceed the 10-in-one-million significance threshold. In accordance with the latest (2015) OEHHA guidance, the calculated total cancer risk conservatively assumes that the residential MER consists of a pregnant woman in the third trimester that subsequently gives birth to an infant during the duration of construction; therefore, all calculated residential risk values were multiplied by a factor of 10. In addition, it was conservatively assumed that the residents were outdoors 8 hours a day, 261 construction days per year and exposed to all of the daily construction emissions.

For non-carcinogenic effects, the chronic hazard index identified for each toxicological endpoint equaled less than one for each identified receptor. Therefore, chronic non-carcinogenic hazards are within acceptable limits. For all receptors, the maximum annual $PM_{2.5}$ concentration would not exceed the Air District significance threshold.

As described above, prior to mitigation, cancer risk at the Residential MER would be potentially **significant** because the project would expose sensitive receptors to substantial concentrations of air pollutant emissions during construction.

Impact AIR-2: Construction activities for the proposed project could generate cancer risks above acceptable levels for the maximally exposed residential receptor.

Mitigation Measure AIR-2: The City of Mountain View shall specify in the construction bid that the project construction contractor(s) and subcontractor(s) comply with the following requirements for all off-road equipment used over the entire duration of the construction activities at the site:

- Use engines that meet either US EPA or California Air Resources Board (CARB) Tier 4 Final emission standards for engines that are greater than 25 horsepower. Ensure that all construction plans submitted to the City of Mountain View Building Division clearly show the selected emission reduction strategy for construction equipment over 25 horsepower.
- If Tier 4 Final equipment is not available for use for the project for a specific piece of off-road construction equipment, documentation shall be provided to the City of Mountain View demonstrating that such equipment is not available for the project. If Tier 4 Final equipment is not available, the construction contractor(s) and subcontractor(s) affected shall use Tier 4 Interim equipment instead. If Tier 4 Interim equipment is not available for use for the project for a specific piece of off-road construction equipment, documentation shall be provided to the City demonstrating that such equipment is not available for the project. If Tier 4 Interim equipment is not available, the construction contractor(s) and subcontractor(s) affected shall use Tier 3 equipment outfitted with a level 3 diesel particulate filter instead.
- Prohibit the use of generators except for electric alternatives. The City shall ensure that all construction plans submitted to the City of Mountain View Building Division clearly show the requirement to use power storage equipment or electric generators in lieu of fossil fuel powered generators.
- Maintain a list of all operating equipment in use on the project site for verification by the City or their designee. The construction equipment list shall state the makes, models, fuel type, and number of construction equipment on-site. All equipment shall be properly serviced and maintained in accordance with the manufacturer's recommendations.
- Communicate with all sub-contractors in contracts and construction documents that all non-essential idling of construction equipment is restricted to 5 minutes or less in compliance with California Air Resources Board Rule 2449 and is responsible for ensuring that this requirement is met.

Significance with Mitigation: Less than significant**.** As shown in Table 4.1-7, *Construction Health Risk Assessment Result – Mitigated,* implementation of Mitigation Measure AIR-2 would reduce

4.1 Air Quality

DPM concentrations at nearby receptors to the extent that the Residential MER, the receptor type that would experience the greatest pollutant concentration and associated cancer risk, would not be exposed to pollutant concentrations which lead to a significant health impact. As such, implementation of Mitigation Measure AIR-2 would reduce impacts to sensitive receptors to a less-than-significant level.

Table 4.1-7 Construction Health Risk Assessment Results – Mitigated

	Project Level Risk		
Receptor	**Cancer Risk (per million)**	**Chronic Hazards**	**Maximum Annual Average PM2.5 Concentration (µg/m3)**
MER – Resident	8	<0.1	<0.1
Air District Threshold	**10**	**1.0**	**0.3**
Exceeds Threshold?	**No**	**No**	**No**

Note: Cancer risk calculated using 2015 OEHHA HRA Guidance Manual.
Risks incorporate Mitigation Measure AIR-1, which requires the use of construction equipment which meets USEPA Tier 4 Final engine requirements for equipment over 25 horsepower and prohibits fossil fuel powered generators.

Localized Long-Term Operational Impacts

Areas of vehicle congestion have the potential to create pockets of CO called hotspots. These pockets have the potential to exceed the State's one-hour standard of 20 ppm or the eight-hour standard of 9.0 ppm. Hotspots are typically produced at intersections, where traffic congestion is highest because vehicles queue for periods of time and are subject to reduced speeds.

Congestion management plans must align with *Plan Bay Area 2050*, and an overarching goal of this regional plan is to concentrate development in areas where there are existing services and infrastructure. This strategy helps reduce the allocation of new growth in outlying areas where substantial transportation investments would be necessary to achieve the per capita passenger vehicle miles traveled and associated GHG emissions reductions under Senate Bill 375. The proposed project would be an infill redevelopment project and would be consistent with this overarching goal of the MTC/ABAG's Plan Bay Area.

Furthermore, a project would have to increase traffic volumes at a single intersection to more than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal air mixing is substantially limited (e.g., underpasses, bridges)—or result in a conflict with the local congestion management plan in order to have the potential to generate a CO hotspot.[14] As previously mentioned, the proposed project would not result in a conflict with the local

[14] Bay Area Air District. 2023, April. California Environmental Quality Act Air Quality Guidelines. https://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/updated-ceqa-guidelines.

congestion management plan because it would constitute the redevelopment of the existing facility and would not result in new uses that cause an expansion of the already urbanized area. Consistent with the Institute of Transportation Engineers (ITE) 11th Edition Trip Generation Manual Rate 571 (Adult Detention Facility), which was determined to be the most representative of the transportation behavior of both the existing and proposed facility, operation of the proposed project would generate up to 14 AM peak hour vehicle trips and 15 PM peak hour vehicle trips beyond existing conditions. According to the Mountain View General Plan Environmental Impact Report's Figure IV.C-9, *Roadway Volumes and Levels of Service (2030)*,[15] the two analyzed roadways nearest to the project site include Central Expressway with 30,000 daily vehicles and South Shoreline Boulevard with 53,400 daily vehicles forecasted for 2030. Dividing these daily vehicle trip volumes by 10, as an industry standard to approximate the peak hour volumes, results in an estimated 3,000 peak hour trips along Central Expressway and 5,340 peak hour trips along South Shoreline Boulevard. Therefore, the addition of up to 15 peak hour trips resulting from the proposed project would not cause nearby transportation facilities (e.g., roadway segments or intersections) to exceed the Air District's screening thresholds and would therefore not result in generating a potential CO hotspot. Therefore, impacts from CO hotspots are considered **less than significant**.

c) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

Construction-Related Odors

During construction of the proposed project, construction equipment exhaust and application of asphalt and architectural coatings would temporarily generate odors. Any construction-related odor emissions would be temporary and intermittent. Additionally, noxious odors would be confined to the immediate vicinity of the construction equipment. By the time such emissions reach any sensitive receptor sites, they would be diluted to well below any level of air quality concern, and impacts would be **less than significant**.

Operational-Related Odors

The proposed project could result in the generation of outdoor odors capable of affecting off-site receptors such as landscaping equipment exhaust, garbage collection, and vehicle exhaust. However, the proposed project is not considered a land use type that is a typical generator of odor that could affect a substantial number of people, such as a landfill or industrial process facility. In addition, by the time such emissions reach any off-site receptors, they would be diluted to well below any level of air quality concern and would not be concentrated such that a substantial number of off-site receptors would be affected.

[15] Mountain View, City of. 2011. General Plan Environmental Impact Report. https://www.mountainview.gov/home/showpublisheddocument/2264/637957226857900000.

Furthermore, nuisance odors are regulated under Air District Regulation 7, Odorous Substances, which requires abatement of any nuisance generating an odor complaint. In addition, odors are also regulated under Air District Regulation 1, Rule 1-301, *Public Nuisance*. Compliance with Air District Regulation 7 would ensure that odor impacts associated with the proposed project are minimized to a **less-than significant** level.

Significance without Mitigation: Less than significant.

4.1.5 Cumulative Impact Analysis

The cumulative area of analysis is the SFBAAB. Similar to GHG emissions impacts, air quality impacts are regional in nature as no single project generates enough emissions that would cause an air basin to be designated as a nonattainment area. Therefore, the impacts previously discussed are evaluated in the cumulative context.

As discussed in impact discussion (a), ground disturbing activities would generate PM_{10} and $PM_{2.5}$; however, Mitigation Measure AIR-1 would ensure that the project implements the Air District's dust control BMPs which would reduce fugitive dust emissions to a less-than-significant level. Additionally, criteria air pollutants from construction equipment exhaust would not exceed the Air District average daily thresholds. The project's operational emissions would also not exceed the Air District's recommended operational criteria air pollutant emissions thresholds. Consequently, the proposed project would not cumulatively contribute to the nonattainment designations of the Air Basin and impacts would be less than significant.

The proposed project would also elevate concentrations of TACs in the vicinity of sensitive receptors during the construction activities, however, Mitigation Measure AIR-2, which would require the use of Tier 4 Final equipment and prohibit the use of fossil fuel powered generators during construction, would reduce cancer health risk for the affected sensitive receptors to below the Air District health risk thresholds. Additionally, as discussed in impact discussion (b), the proposed project's contribution of 15 additional peak hour trips would not cause nearby transportation facilities (e.g., roadway segments or intersections) to exceed the Air District's screening thresholds and would therefore not result in generating a potential CO hotspot. Cumulative localized health risk impacts would therefore be **less than significant**.

4.2 BIOLOGICAL RESOURCES

This section of the Draft Environmental Impact Report (EIR) evaluates the potential for implementation of the proposed project to impact biological resources. As described in Chapter 2, *Introduction*, of this Draft EIR, the only significance criteria identified in the California Environmental Quality Act (CEQA) Guidelines that are evaluated in this chapter include potential impacts to sensitive species and the potential to conflict with local policies protecting biological resources. Therefore, this chapter only addresses these two issues.

4.2.1 Regulatory Background

FEDERAL AND STATE

State and federal agencies have a lead role in the protection of biological resources under their permit authority set forth in statues and regulations. The United States Fish and Wildlife Service (USFWS) is responsible for administering the Migratory Bird Treaty Act (MBTA) and the federal Endangered Species Act (ESA).

At the State level, the California Department of Fish and Wildlife (CDFW) is responsible for administration of the California Endangered Species Act (CESA). Sections 3500-3516, 4700, 5050, and 5515 of the California Fish and Game Code (CFGC) address Fully Protected species.

Special-status species are plants and animals that are legally protected under the ESA/CESA or other laws and regulations, and also include other species considered rare enough by the scientific community and trustee agencies to warrant special consideration, particularly with regard to protection of isolated populations, nesting or denning locations, communal roosts, and other essential habitat. Species with legal protection under the ESA/CESA may present major constraints to development, particularly when they are wide-ranging or highly sensitive to habitat disturbance and where proposed development would result in a "take" of these species. “Take” is a term used in the ESA to include, "harass, harm, pursue, hunt, shoot, wound, kill trap, capture, or collect, or to attempt to engage in any such conduct."[1]

Protecting habitat on an ecosystem-level is increasingly recognized as vital to the protection of natural diversity in the State. A project would normally be considered to have a significant effect on the environment if it would substantially affect a sensitive natural community, such as a riparian woodland, native grassland, or coastal salt marsh. Further loss of a sensitive natural community could also be interpreted as substantially diminishing habitat, depending on the relative abundance, quality and degree of past disturbance, and the anticipated impacts.

[1] United Stated Fish & Wildlife Services Endangered Species Act 40 Years of Conserving Endangered Species, https://www.fws.gov/endangered/esa-library/pdf/ESA_basics.pdf.

4.2 Biological Resources

LOCAL

Mountain View 2030 General Plan

The Mountain View 2030 General Plan includes goals and policies relevant to biological resources in the Infrastructure and Conservation Element, and the Parks, Open Space and Community Facilities Element. The policies relevant to the proposed project are described in Section 4.2.4, *Project Impact Analysis*, of this chapter.

Mountain View Municipal Code

The City of Mountain View Municipal Code contains all ordinances for the city. The Municipal Code is organized by Chapter, Article, and Section.

Chapter 36, *Zoning*, Article XI, *Landscaping*, Division 2, *General Landscaping Regulations*, sets forth the standards for landscaping in the city. Section 36.34.10, *General Landscaping Standards*, which amongst other things, describes the standards for plant size, spacing, parking lot landscaping, and drought-tolerant and/or native species. Section 36.34.20, *Installation of Required Landscaping*, sets forth the standards for the inspection of required landscaping. Section 36.34.25, *Removal of Trees*, states that the removal of healthy trees of any size is discouraged and that "Heritage trees," as defined, shall be retained to the extent possible. The removal of a Heritage tree shall be done in compliance with the permit application and review provisions of Chapter 32, *Trees, Shrubs and Plants*, Article II, *Protection of the Urban Forest*.

Chapter 32, *Trees, Shrubs and Plants,* Article II, *Protection of The Urban Forest*, establishes regulations related to tree protection in the city. Section 32.23, *Definitions*, defines a heritage tree as any one of the following:

- A tree which has a trunk with a circumference of forty-eight (48) inches or more measured at fifty-four (54) inches above natural grade;
- A multi-branched tree which has major branches below fifty-four (54) inches above the natural grade with a circumference of forty-eight (48) inches measured just below the first major trunk fork.
- Any quercus (oak), sequoia (redwood), or cedrus (cedar) tree with a circumference of twelve (12) inches or more when measured at fifty-four (54) inches above natural grade;
- A tree or grove of trees designated by resolution of the city council to be of special historical value or of significant community benefit.

Section 32.25, *Heritage Tree Preservation*, enacts regulations for heritage tree preservation, and Section 32.28, *Application for Removal Permit; Term of Permit,* outlines the permits that are required to remove a heritage tree and the application process. Section 32.35, *Criteria for Removal; Conditions; Findings*, describes the criteria and conditions of approval for the removal of heritage trees and states that the decision-maker shall consider additional criteria, if

applicable, in weighing the decision to remove a heritage tree, with an emphasis on the intent to preserve heritage trees. Section 32.35(d) describes the potential for any replacement trees to be placed off-site or that an applicant be permitted to pay a fee in lieu of replacement.

4.2.2 Existing Conditions

Habitat

The project site and surrounding area have been urbanized and now support roadways, structures, other impervious surfaces, areas of turf, and ornamental landscaping. Remnant native trees are scattered throughout the urbanized area, together with non-native trees, shrubs, and groundcovers. The site is currently occupied by the Mountain View Police Services - Fire Administration building, associated surface parking, a pump station, and a K-9 training area that is currently operating. The project site is bound by roadways on all sides and property, and land beyond the roadways is developed with residential, commercial uses, and educational land uses. Pursuant to the Mountain View General Plan EIR, the site is classified as a developed area.[2] The CALVEG habitat mapping program describes urban areas as lands that tend to have low to poor wildlife habitat value due to replacement of natural communities, fragmentation of remaining open space areas and parks, and intensive human disturbance.[3]

Wildlife and Plants

The diversity of urban wildlife depends on the extent and type of landscaping and remaining open space, as well as the proximity to natural habitat. Trees and shrubs used for landscaping provide nest sites and cover for wildlife adapted to developed areas. Typical native bird species include the mourning dove, scrub jay, northern mockingbird, American robin, brown towhee, American crow, and Anna's hummingbird, among others. Introduced species include the rock dove, European starling, house finch, and house sparrow. Urban areas can also provide habitat for several species of native mammals such as the California ground squirrel and striped skunk, as well as the introduced eastern fox squirrel and eastern red fox. Introduced pest species such as the Norway rat, house mouse, and opossum are also abundant in developed areas. Numerous bat species are also known to be in the Mountain View area, most of which are relatively common and are not considered special-status species.

Given the urbanized and built-out nature of the site and the surrounding area, there is no essential habitat for special-status species on the site. However, there is a possibility that birds, including special-status birds, could nest in trees and other landscaping on the project site. The

[2] City of Mountain View, 2012, Draft 2030 General Plan and Greenhouse Gas Reduction Program EIR, IV. Setting, Impacts, and Mitigation Measures, J. Biological Resources, page 410.
[3] The CALVEG system was initiated in January 1978 by the Region 5 Ecology Group of the US Forest Service to classify California's existing vegetation communities for use in statewide resource planning. CALVEG maps use a hierarchical classification on the following categories: forest; woodland; chaparral; shrubs; and herbaceous.

4.2 Biological Resources

nests of most bird species are protected under the MBTA when in active use, and there is a remote possibility that one or more raptor species protected under the MBTA and CFGC could nest on the project site. Bat species are also known to be in the Mountain View area, most of which are relatively common and are not considered special-status species. These species have no legal protected status under the ESA or CESA, but the Pallid bat and Western red bat are considered a Species of Special Concern by the CDFW. Bat species found in the Mountain View vicinity may forage and occasionally roost in the site vicinity, but because the buildings on the site are occupied, no suitable habitat for maternity roosts are on the site.

Protected Trees

A tree inventory was prepared for the proposed project by Woodreeve Consulting, LLC to assess the health and structural conditions of the trees on the project site, identify all "protected trees" as defined by Mountain View Municipal Code Chapter 32, *Trees, Shrubs and Plants,* described in the regulatory setting, assess the impacts of constructing the proposed project on the trees, and present guidelines for tree preservation.[4] The Tree Report evaluated 105 trees, representing 17 species on the site. These trees represent the following species: Blackwood acacia (*Acacia melanoxylon),* Italian alder *(Alnus cordata),* Raywood ash *(Fraxinus oxycarpa 'Raywood'),* Evergreen ash *(Fraxinus uhdei),* Honey locust *(Gleditsia triacanthos f. inermis),* Sweetgum *(Liquidambar styraciflua),* Olive *(Olea europaea),* Chinese Pistache *(Pistacia chinensis),* London plane *(Platanus x hispanica),* Purple-leaf plum *(Prunus cerasifera 'Atropurpurea'), Flowering cherry (Prunus serrulate),* Callery pear *(Pyrus calleryana),* Evergreen pear *(Pyrus kawakamii),* Coast live oak (*Quercus agrifolia*), Valley oak (*Quercus lobata), Coast redwood (Sequoia sempervirens),* and Xylosma *(Xylosma congestum).*

The project site includes trees that are concentrated around the perimeter of the site, with a group of 48 trees (almost half the total) located south of the existing building along Villa Street.

The professional arborist evaluated the health and structural condition of the 105 trees on the project site, applying a scale of 1 to 5, with 1 being the poorest condition and 5 being excellent condition. These are defined as follows:

- 5 = Excellent health and vitality. Good form and structure. No insect or disease problems of significance.
- 4 = Good health and vitality. Minor dieback and/or decline in vigor. Insignificant structural defects or insects/disease issues that can be corrected.

[4]Woodreeve Consulting, May 2022, Draft Tree Inventory Report Public Safety Headquarters, Mountain View, CA.

- 3 = Moderate health and vitality. Moderate twig and branch dieback or chlorotic foliage. Fair structure, limited decay and/or insects/disease issues that would require a concerted effort to correct.
- 2 = Poor health and vitality. Declining tree with extensive dieback or very thin crown. Significant decay and/or structural defects that cannot be corrected.
- 1 = Very poor health and vitality. Tree is mostly dead or has extensive structural defects that cannot be corrected.

The northern portion of the site was a typical parking lot, with exotic species located around the perimeter and in parking lot islands. The southern portion of the site, in front of the existing building, was more park like, with a generous planting of coast redwood, sweetgum and flowering cherries.

Trees were generally in good (46 percent of the population) to fair (42 percent) condition. Tree condition at the site was directly related to the amount of growing space provided. Coast redwoods were well represented, with 31 trees, or almost 30 percent, of the population.

A total of 60 *Heritage* trees assessed on the site, including 31 coast redwoods, 6 coast live oaks, valley oak #251 and 22 exotic species.

4.2.3 Significance Criteria

The Initial Study prepared for this Draft EIR (see Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments*) identified that the proposed project would not result in a significant impact for the following significance criteria:

- Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?
- Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?
- Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?
- Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

4.2 Biological Resources

The proposed project would have a significant impact under Appendix G, *Environmental Checklist Form*, of the California Environmental Quality Act (CEQA) Guidelines if it would:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.

b) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

4.2.4 Project Impact Analysis

The following impact analysis addresses thresholds of significance for which the Initial Study disclosed potentially significant impacts.

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Nesting Birds

As stated above in the existing conditions discussion, there are no known occurrences of special-status plant or animal species and no suitable habitat for such species on the project site, but there is a possibility that birds that are protected by the MBTA and CFGC could nest in trees and other landscaping on the project site. However, no essential habitat for these or other special-status species is present on the site due to its developed condition. Without mitigation, this impact is considered **significant**.

Impact BIO-1: Tree removal and demolition activities during site clearance could destroy active nests, and/or otherwise interfere with nesting of birds protected under federal and State law.

Mitigation Measure BIO-1: Nests of raptors and other birds shall be protected when in active use, as required by the federal Migratory Bird Treaty Act and the California Fish and Game Code. The construction contractor shall indicate the following on all construction plans, if construction activities and any required tree removal occur during the breeding season (February 1 and August 31). Preconstruction surveys shall:

- Be conducted by a qualified biologist prior to tree removal or grading, demolition, or construction activities. Note that preconstruction surveys are not required for tree removal or construction, grading, or demolition activities outside the nesting period.

- Be conducted no more than 14 days prior to the start of tree removal or construction.
- Be repeated at 14-day intervals until construction has been initiated in the area after which surveys can be stopped.
- Document locations of active nests containing viable eggs or young birds.

Protective measures for active nests containing viable eggs or young birds shall be implemented under the direction of the qualified biologist until the nests no longer contain eggs or young birds. Protective measures shall include:

- Establishment of clearly delineated exclusion zones (i.e., demarcated by identifiable fencing, such as orange construction fencing or equivalent) around each nest location as determined by the qualified biologist, taking into account the species of birds nesting, their tolerance for disturbance and proximity to existing development. In general, exclusion zones shall be a minimum of 300 feet for raptors and 75 feet for passerines and other birds.
- Monitoring active nests within an exclusion zone on a weekly basis throughout the nesting season to identify signs of disturbance and confirm nesting status.
- An increase in the radius of an exclusion zone by the qualified biologist if project activities are determined to be adversely affecting the nesting birds. Exclusion zones may be reduced by the qualified biologist only in consultation with California Department of Fish and Wildlife.
- The protection measures shall remain in effect until the young have left the nest and are foraging independently or the nest is no longer active.

Significance with Mitigation: Less than significant.

Roosting Bats

As described in the existing conditions, there are bat species are also known to be in the Mountain View area, most of which are relatively common and are not considered special-status species. Bat species found in the Mountain View vicinity may forage and occasionally roost in the site vicinity, but suitable habitat conditions for maternity roots is absent from the site. The potential for any special-status bat species to be present on the site is considered highly remote, given the urbanization of the site vicinity and intensity of human activity, which typically discourages possible occupation by special-status bats. Accordingly, the construction

and operation of the proposed project would not result in the inadvertent loss of any bats and impacts would be **less than significant**.

Significance without Mitigation: Less than significant.

b) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

General Plan

As described below, the proposed project would not conflict with any goals and policies in the General Plan related to the protection of biological resources that are relevant to the proposed project:

- **Policy INC 16.3** requires the protection and enhancement of nesting, foraging, and other habitat for special-status species and other wildlife. While the proposed project would be located in an infill, urban area, which does not contain any sensitive habitat of special concern, there is the potential for birds, including special-status birds, to nest in the on-site trees. The proposed project would include new landscaping including trees, shrubs, and groundcover as part of the on-site bioretention areas which would enhance urban ecosystem while also providing stormwater treatment that is beneficial to wildlife.
- **Policy INC 16.4** requires the containment and reduction of the amount of invasive species. The proposed landscaping would be in compliance with the Mountain View Municipal Code Chapter 36, *Zoning*, Article XI, *Landscaping*, Division 2, *General Landscaping Regulations*, which amongst other things, requires landscape design and construction to include drought-tolerant and/or native species in Section 36.34.10(f), *General Landscaping Standards*).
- **Policy INC 16.6** requires the integration of biological resources, such as green roofs and native landscaping, into the built environment. The proposed project would include new trees, plants, shrubs, and groundcover with drought tolerant and native species as part of the overall landscaping and on-site bioretention areas.
- **Policy POS 12.1** requires the protection of trees as an ecological and biological resource. The proposed project would remove some trees, including trees that qualify as “heritage” trees pursuant to Municipal Code Chapter 32, *Trees, Shrubs and Plants.* The project applicant would comply with the permit requirements for the removal of heritage trees pursuant to Municipal Code Section 32.28, *Application for Removal Permit; Term of Permit.* Additionally, the proposed project would include new trees, plants, shrubs, and groundcover with drought tolerant and native species as part of the overall landscaping and on-site bioretention areas.

- **Policy POS 12.2** requires increasing the tree canopy coverage to expand shaded areas, enhance aesthetics and help reduce greenhouse gases. The proposed project would remove some trees and shrubs as part of the new development, but would include new trees, plants, shrubs, and groundcover with drought tolerant and native species as part of the overall landscaping and on-site bioretention areas.
- **Policy POS 12.4** requires increasing water-efficient, drought-tolerant and native landscaping where appropriate on public and private property. The proposed landscaping would be in compliance with the Mountain View Municipal Code Chapter 36, *Zoning*, Article XI, *Landscaping*, Division 2, *General Landscaping Regulations*, which amongst other things, requires landscape design and construction to include drought-tolerant and/or native species in Section 36.34.10(f), *General Landscaping Standards*).

Municipal Code

Municipal Code, Chapter 32, *Trees, Shrubs and Plants,* Article II, *Protection of The Urban Forest*, provides regulations for the protection, preservation, and maintenance of trees of certain species and sizes. The proposed project includes the removal of trees that meet the City's requirements for qualifying as "heritage" trees. Removal of a protected tree is permitted by the City, with approval of a tree removal permit. In some circumstances, the City requires tree management plans and tree replacement. The removal of trees protected under the City's Municipal Code is considered a **significant** impact.

Impact BIO-2: The proposed development would result in removal of trees protected under City's Municipal Code.

> **Mitigation Measure BIO-2:** The proposed project shall comply with the City of Mountain View's Municipal Code requirements for the provision of the removal of heritage trees in Chapter 32, Trees, Shrubs and Plants, Article II, Protection of The Urban Forest. A tree removal permit shall be obtained for the removal of any "heritage" tree, and replacement plantings shall be provided as approved by the City. If permitted, any replacement trees be placed off-site or an appropriate in-lieu tree replacement fee may be paid to the City of Mountain View as compensation for "heritage" trees removed by the proposed project, where sufficient land area is not available on-site for adequate replacement and when approved by the City.
>
> In addition, a Tree Protection and Replacement Program (Program) shall be developed by a Certified Arborist prior to project approval and implemented during project construction to provide for adequate protection and replacement of "heritage" trees, as defined by the City's Municipal Code. The Program shall include, but is not limited to, the following provisions:

4.2 Biological Resources

- Adequate measures shall be defined to protect all trees to be preserved. These measures should include the establishment of a tree protection zone (TPZ) around each tree to be preserved, in which no disturbance is permitted. For design purposes, the TPZ shall be located at the dripline of the tree or 10 feet, whichever is greater. If necessary, the TPZ for construction-tolerant species (i.e., coast live oaks) may be reduced to 7 feet.

- Temporary construction fencing shall be installed at the perimeter of TPZs prior to demolition, grubbing, or grading. Fences shall be 6-foot chain link or equivalent, as approved by the City of Mountain View. Fences shall remain until all construction is completed. Fences shall not be relocated or removed without permission from the consulting arborist.

- No grading, excavation, or storage of materials shall be permitted within TPZs. Construction trailers, traffic, and storage areas shall remain outside fenced areas at all times. No excess soil, chemicals, debris, equipment, or other materials shall be dumped or stored within the TPZ.

- Underground services including utilities, sub-drains, water or sewer shall be routed around the TPZ. Where encroachment cannot be avoided, special construction techniques such as hand digging or tunneling under roots shall be employed where necessary to minimize root injury. Irrigation systems must be designed so that no trenching will occur within the TPZ.

- Construction activities associated with structures and underground features to be removed within the TPZ shall use the smallest equipment and operate from outside the TPZ. The consulting arborist shall be on-site during all operations within the TPZ to monitor demolition activity.

- All grading, improvement plans, and construction plans shall clearly indicate trees proposed to be removed, altered, or otherwise affected by development construction. The tree information on grading and development plans should indicate the number, size, species, assigned tree number, and location of the dripline of all trees that are to be retained/preserved. All plans shall also include tree preservation guidelines prepared by the consulting arborist.

- The demolition contractor shall meet with the consulting arborist before beginning work to discuss work procedures and tree protection. Prior to beginning work, the contractor(s) working in the vicinity of trees to be preserved shall be required to meet with the consulting arborist at the site to review all work procedures, access routes, storage areas, and tree protection measures.

- All contractors shall conduct operations in a manner that will prevent damage to trees to be preserved. Any grading, construction, demolition or other work that is expected to encounter tree roots shall be monitored by the consulting arborist. If injury should occur to any tree during construction, it should be evaluated as soon as possible by the consulting arborist so that appropriate treatments can be applied.

- Any plan changes affecting trees shall be reviewed by the consulting arborist with regard to tree impacts. These include, but are not limited to, site improvement plans, utility and drainage plans, grading plans, landscape and irrigation plans, and demolition plans.

- Trees to be preserved may require pruning to provide construction clearance. All pruning shall be completed by a State of California Licensed Tree Contractor (C61/D49). All pruning shall be done by Certified Arborist or Certified Tree Worker in accordance with the current Best Management Practices for Pruning published by the International Society of Arboriculture, and adhere to the current editions of the American National Standard for Tree Care Operations (Section Z133.1) and Pruning (Section A300).

- Any root pruning required for construction purposes shall receive the prior approval of and be supervised by the consulting arborist.

- Any demolition or excavation, such as grading, pad preparation, excavation, and trenching, within the dripline or other work that is expected to encounter tree roots should be approved and monitored by the consulting arborist. Any root pruning required for construction purposes shall receive prior approval of, and by supervised by, the consulting arborist. Roots shall be cut by manually digging a trench and cutting exposed roots with a sharp saw.

- Tree(s) to be removed that have branches extending into the canopy of tree(s) to remain must be removed by a qualified arborist and not by construction contractors. The qualified arborist shall remove the tree in a manner that causes no damage to the tree(s) and understory to remain. Tree stumps shall be ground 12 inches below ground surface.

- All tree work shall comply with the Migratory Bird Treaty Act as well as California Fish and Game Code Sections 3503 through 3513 to not disturb nesting birds. To the extent feasible, tree pruning, and removal shall be scheduled outside of the breeding season. Breeding bird surveys shall be conducted prior to tree work. Qualified biologists shall be involved in establishing work buffers for active nests. (See Mitigation Measure BIO-1.)

4.2 Biological Resources

- The vertical and horizontal locations of all the trees identified for preservation shall be established and plotted on all plans. These plans shall be forwards to the consulting arborist for review and comment.
- Foundations, footings, and pavements on expansive soils near trees shall be designed to withstand differential displacement to protect the soil surrounding the tree roots.
- Any liming within 50 feet of any tree shall be prohibited, as lime is toxic to tree roots. Any herbicides placed under paving materials shall be safe for use under trees and labeled for that use.
- Brush from pruning and trees removal operations shall be chipped and spread beneath the trees within the TPZ. Mulch shall be between 2 inches and 4 inches in depth and kept at a minimum of 3 feet from the base of the trees.
- All recommendations for tree preservation made by the applicant's consulting arborist shall be followed.

Significance with Mitigation: Less than significant.

4.2.5 Cumulative Impact Analysis

The geographic scope of the cumulative analysis for biological resources considers the surrounding incorporated and unincorporated lands, and the region. The potential impacts of proposed development on biological resources tend to be site-specific, and the overall cumulative effect would be dependent on the degree to which significant vegetation and wildlife resources are protected on a particular site. At the same time, cumulative development can contribute incrementally to regionwide impacts, such as reductions in the amount of existing wildlife habitat, particularly for birds and larger mammals. Any cumulative development projects within the vicinity of the project are located in urbanized areas and contain limited biological resource value. Redevelopment and infill projects, including those in built-out urban areas, would remove vegetation that could be used for nesting by birds protected under various laws and would remove buildings and trees that could be used for roosting by sensitive bat species. However, these development projects would be required to comply with the federal Migratory Bird Treaty Act and the CFGC, which require pre-construction surveys and protective measures for active nests. Furthermore, cumulative projects would be required to obtain a tree removal permit and adhere to the tree removal requirements for protected trees under City's Municipal Code.

The project site is previously disturbed, is developed for the same uses as the proposed project use, and is located within an urban area; therefore, it does not serve as a wildlife corridor.

Potential impacts to nesting birds and the removal of protected trees would be mitigated to less-than-significant levels through the implementation of Mitigation Measure BIO-1 and BIO-2, respectively. Given the relatively low natural resource quality of the project site and the project's mitigation of on-site impacts to less-than-significant levels, the proposed project would result in a **less-than-significant** cumulative impact on biological resources.

Significance with Mitigation: Less than significant.

4.2 Biological Resources

This page is intentionally left blank.

4.3 CULTURAL AND TRIBAL CULTURAL RESOURCES

This section of the Draft Environmental Impact Report (EIR) evaluates the potential for implementation of the Mountain View Public Safety Building to impact cultural resources. Cultural resources comprise archaeological and historical resources. Archaeology studies human artifacts, such as places, objects, and settlements that reflect group or individual religious, cultural, or everyday activities. Historical resources include sites, structures, objects, or places that are at least 50 years old and are significant for their engineering, architecture, cultural use or association, etc. In California, historic resources cover human activities over the past 12,000 years. Cultural resources provide information on scientific progress, environmental adaptations, group ideology, or other human advancements. The analysis in this section is based in part on the following information:

> *Historic Resources Evaluation Mountain View Police Services – Fire Administration Building Mountain View California,* Forget Me Not History, May 2023.

A complete copy of this study is provided in Appendix C, *Historic Resources Evaluation*, of this Draft EIR.

4.3.1 Regulatory Background

FEDERAL

National Historic Preservation Act

The National Historic Preservation Act of 1966 (NHPA) coordinates public and private efforts to identify, evaluate, and protect the nation's historic and archaeological resources. The act authorized the National Register of Historic Places, which lists districts, sites, buildings, structures, and objects that are significant in American history, architecture, archaeology, engineering, and culture.

Archaeological Resources Protection Act

The Archaeological Resources Protection Act of 1979 regulates the protection of archaeological resources and sites on federal and Indian lands.

Native American Graves Protection and Repatriation Act

NAGPRA is a federal law passed in 1990 that mandates museums and federal agencies to return certain Native American cultural items—such as human remains, funerary objects, sacred objects, or objects of cultural patrimony—to lineal descendants or culturally affiliated Indian tribes.

4.3 Cultural and Tribal Cultural Resources

STATE

California Public Resources Code

Archaeological, paleontological, and historical sites are protected under a wide variety of State policies and regulations in the California Public Resources Code (PRC). In addition, cultural and paleontological resources are recognized as nonrenewable resources and receive protection under the PRC and California Environmental Quality Act (CEQA).

PRC Sections 5020 to 5029.5 continued the former Historical Landmarks Advisory Committee as the State Historical Resources Commission. The commission oversees the administration of the California Register of Historical Resources and is responsible for designating State Historical Landmarks and Historical Points of Interest.

PRC Sections 5079 to 5079.65 define the functions and duties of the Office of Historic Preservation (OHP), which administers federal- and State-mandated historic preservation programs in California as well as the California Heritage Fund.

PRC Sections 5097.9 to 5097.991 provide protection to Native American historical and cultural resources and sacred sites; identify the powers and duties of the Native American Heritage Commission (NAHC); require that descendants be notified when Native American human remains are discovered; and provide for treatment and disposition of human remains and associated grave goods.

California Register of Historic Resources

The California Register of Historic Resources (California Register) establishes a list of properties to be protected from substantial adverse change (Public Resources Code Section 5024.1). The State Office of Historic Preservation (OHP) has determined that buildings, structures, and objects 45 years or older may be of historical value. A historical resource may be listed in the California Register if it meets any of the following criteria.

- It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
- It is associated with the lives of persons important in California's past.
- It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic value.
- It has yielded or is likely to yield information important in prehistory or history.

4.3 Cultural and Tribal Cultural Resources

The California Register includes properties that are listed or have been formally determined eligible for listing in the National Register, State Historical Landmarks, and eligible Points of Historical Interest. Other resources that may be eligible for the California Register, and which require nomination and approval for listing by the State Historic Resources Commission, include resources contributing to the significance of a local historic district, individual historical resources, historical resources identified in historic surveys conducted in accordance with OHP procedures, historic resources or districts designated under a local ordinance consistent with the procedures of the State Historic Resources Commission, and local landmarks or historic properties designated under local ordinance.

California Health and Safety Code

California Health and Safety Code Section 7050.5 requires that in the event that human remains are discovered within the project site, disturbance of the site shall halt and remain halted until the coroner has conducted an investigation into the circumstances, manner, and cause of any death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative. If the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes or has reason to believe the human remains to be those of a Native American, he or she shall contact, by telephone within 24 hours, the NAHC.

State Laws Pertaining to Human Remains

Any human remains encountered during ground-disturbing activities are required to be treated in accordance with California Code of Regulations Section 15064.5(e) (CEQA), PRC Section 5097.98, and the California Health and Safety Code Section 7050.5. California law protects Native American burials, skeletal remains, and associated grave goods regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. Specifically, Section 7050.5 of the California Health and Safety Code states that in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the remains are discovered has determined whether or not the remains are subject to the coroner's authority. If the human remains are determined to be of Native American origin, the county coroner must contact the California NAHC within 24 hours of this identification. An NAHC representative will then identify a Native American Most Likely Descendant to inspect the site and provide recommendations for the proper treatment of the remains and associated grave goods. In addition, CEQA Guidelines Section 15064.5 specifies the procedures to be followed in case of the discovery of human remains on non-federal land. The disposition of Native American burials falls within the jurisdiction of the NAHC.

4.3 Cultural and Tribal Cultural Resources

Assembly Bill 52

AB 52 took effect July 1, 2015, and requires inclusion of a new section in CEQA documents titled Tribal Cultural Resources, which include heritage sites. Under AB 52, a tribal cultural resource is defined as sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either included or eligible for inclusion in the California Register of Historic Resources or included in a local register of historical resources. Or the lead agency, supported by substantial evidence, chooses at its discretion to treat the resource as a tribal cultural resource.

AB 52 requires consultation with tribes at an early stage to determine whether the project would have an adverse impact on TCRs and define mitigation to protect them. Per AB 52, within 14 days of deciding to undertake a project or determining that a project application is complete, the lead agency must provide formal written notification to all tribes who have requested it. The tribe then has 30 days of receiving the notification to respond if it wishes to engage in consultation. The lead agency must initiate consultation within 30 days of receiving the request from the tribe. Consultation concludes when both parties have agreed on measures to mitigate or avoid a significant effect to a tribal cultural resource, or a party, after a reasonable effort in good faith, decides that mutual agreement cannot be reached. Regardless of the outcome of consultation, the CEQA document must disclose significant impacts on tribal cultural resources and discuss feasible alternatives or mitigation that avoid or lessen the impact.

LOCAL

Mountain View 2030 General Plan

The Mountain View 2030 General Plan includes goals and policies relevant to cultural resources in Mountain View in the Land Use and Design Element. The policies relevant to the proposed project are listed in Table 4.3-1, *Mountain View 2030 General Plan Policies Relevant to Cultural Resources and the Proposed Project*.

Table 4.3-1 Mountain View 2030 General Plan Policies Relevant to Cultural Resources and the Proposed Project

Policy Number	Policy Text
Chapter 3, Land Use and Design (LUD) Element	
Policy LUD 11.1	*Historical preservation.* Support the preservation and restoration of structures and cultural resources listed in the Mountain View Register of Historic Resources, the California Register of Historic Places or National Register of Historic Places.
Policy LUD 11.2	*Adaptive re-use.* Encourage the adaptive re-use of historic buildings in ways that retain their historical materials and character-defining features.
Policy LUD 11.3:	*Incentives.* Encourage historical preservation through incentives and opportunities.
Policy LUD 11.5	*Archaeological and paleontological site protection.* Require all new development to meet

Table 4.3-1 Mountain View 2030 General Plan Policies Relevant to Cultural Resources and the Proposed Project

Policy Number	Policy Text
	state codes regarding the identification and protection of archaeological and paleontological deposits.
Policy LUD 11.6	*Human remains*. Require all new development to meet state codes regarding the identification and protection of human remains.

Source: City of Mountain View, 2012, *Mountain View 2030 General Plan.*

Mountain View Municipal Code

The Mountain View Municipal Code contains all ordinances for the city. The Municipal Code is organized by Chapter, Article, Division, and Section.

Division 15, *Designation and Preservation of Historic Resources*, establishes regulations related to how a resource is designated and the designation criteria. Section 36.54.70, Designation process for Historic Register, outlines the designation process and each step for a building to be placed on the Historic Register

Mountain View Register of Historic Resources

Last updated in 2022, the Mountain View Register of Historic Resources outlines the buildings in Mountain View that are historically significant. Within the register, there are 42 privately owned properties and 3 City-owned properties. The project site is not included on the list of properties.

This list is currently being updated along with a Citywide Historic Resources Survey being undertaken.

4.3.2 Existing Conditions

ARCHAEOLOGICAL RESOURCES

Tamien-speaking indigenous communities, later known as the Ohlone, lived in villages in what is now Mountain View. A large earthen mound created by the local tribes (near the present-day Monta Loma neighborhood) serves as a ceremonial and cultural center for the area. In 1777, most of the South Bay became part of the lands of Mission Santa Clara de Asis. Indigenous peoples were relocated to Mission Santa Clara and other nearby missions, where disease killed much of the population and traditional culture and autonomy were subverted.[1]

According to the City of Mountain View Draft 2030 General Plan and Greenhouse Gas Reduction Program Final Environmental Impact Report (SCH No. 2011012069), fossiliferous deposits exist

[1] Mountain View Historical Association, https://www.mountainviewhistorical.org/mountain-view-history-timeline/, accessed on January 29, 2025.

in the general area. The City of Mountain View lies on alluvial plains at the southern end of the San Francisco Bay, which consists primarily of Quaternary Period (1,800,000 years B.P. to present) deposits. These Quaternary alluvial deposits were laid down by the Adobe, Permanente, and Steven's creeks exiting the Santa Cruz Mountains south of Mountain View, and estuarine deposits created by these creeks and the San Francisco Bay. Older Pleistocene deposits typically occur as terraces incised by Holocene fluvial drainages. Locally, Late Pleistocene alluvium (126,000 to 10,000 years B.P.) contains invertebrate and extinct vertebrate fossils, many of which are representative of the Rancholabrean land mammal age. Fossils in alluvium of this age include bison, mammoth, ground sloths, saber-toothed cats, dire wolves, horses, cave bears, rodents, birds, reptiles, and amphibians.[2]

PROJECT SITE HISTORY

This section was prepared using information from the Historic Resource Evaluation Report that was prepared in May 2023 by Forget Me Not History (see Appendix C, *Historic Resources Evaluation*).

The Mountain View Police Services - Fire Administration building has not been previously documented and evaluated for listing in the National Register of Historic Places, California Register of Historical Resources, and Mountain View Register of Historic Resources.

From the 1890s to 1920s, the block on which the project site is located was developed with a mix of residential and light industrial properties. For a time, the northern section of the property (abutting the railroad tracks) contained Mrs. S. E. Bubb's grain warehouse and a corral. In 1915, a portion of the project site was a pickle works that expanded over time. By 1943, the entire block of the project site was a pickle and catsup factory. In 1963, the pickle and catsup factory were shut down and the property became vacant.

In 1977 the project site was identified as the location for the future Mountain View Police Services - Fire Administration building and the architecture firm Goodwin B. Steinberg Associates was retained to design the building. Steinberg served as the principal architect and collaborated with a team of architects, including Pete Dalton and Karl Coombs, on the building's design. The new facility, which included the main building, sign and flagpole, landscaping, and parking lots, was dedicated in March 1980. In 1984, several features that had been eliminated from the proposed plans were completed. Based on a review of drawings and plans provided by the City of Mountain View and visual observation during a site visit, the subject property underwent minimal alterations over the next four decades.

[2] City of Mountain View, September 2012, City of Mountain View Draft 2030 General Plan and Greenhouse Gas Reduction Program Final Environmental Impact Report (SCH No. 2011012069), https://www.mountainview.gov/home/showpublisheddocument/2262/637957226851270000, accessed on January 29, 2025.

Goodwin Steinberg's design for the building incorporated many of his signature elements for large-scale buildings. The building is situated at the southeast corner of the parcel within extensive landscaping. The main façade is one story in height and located at grade with a large entry plaza designed to provide an open feeling inviting community involvement. The lower story is partially embedded in the sloped terrain of the site, allowing the majority of the parking to be located to the rear and below grade, thus obscured from view when approaching the main entrance. The site's topography also allows the north façade to expand to two stories in height, with wide expanses of skylights across the main story and day-to-day police and mechanical operations to occur at the lower story.

Prior to his death in 2010, Goodwin Steinberg was elevated to the American Institute of Architects Fellows, the highest honor for exceptional contributions to the architecture field.

TRIBAL CONSULTATION

In compliance with the requirements set forth in AB 52, the City of Mountain View provided formal notification of the proposed project and served an invitation for consultation to the following tribes:

- Amah Mutsun Tribal Band
- Amah Mutsun Tribal Band of Mission San Juan Bautista
- Indian Canyon Mutsun Band of Costanoan
- Muwekma Ohlone Indian Tribe of the SF Bay Area
- North Valley Yokuts Tribe
- Tamien Nation
- The Ohlone Indian Tribe
- Wuksachi Indian Tribe/Eshom Valley Band

These letters were sent based on a contact list provided by the Native American Heritage Commission on November 13, 2023. As of the time of publication of this Draft EIR, none of the contacted tribes responded to the invitation for consultation.

4.3.3 Significance Criteria

CEQA Guidelines Section 15064.5 provides direction on determining significance of impacts to archaeological and historical resources. Generally, a resource shall be considered "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (PRC Section 5024.1):

- Criterion 1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

- Criterion 2. Is associated with the lives of persons important in our past.

4.3 Cultural and Tribal Cultural Resources

- Criterion 3. Embodies the distinctive characteristics of a type, period, region or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- Criterion 4. Has yielded, or may be likely to yield, information important in prehistory or history.

The fact that a resource is not listed in the California Register of Historical Resources, not determined to be eligible for listing, or not included in a local register of historical resources does not preclude a lead agency from determining that it may be a historical resource.

The proposed project would have a significant impact under Appendix G, *Environmental Checklist Form*, of the California Environmental Quality Act (CEQA) Guidelines if it would:

a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5.

c) Disturb any human remains, including those interred outside of dedicated cemeteries.

d) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

   i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or

   ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

4.3.4 Project Impact Analysis

The following impact analysis addresses thresholds of significance for which the Initial Study disclosed potentially significant impacts.

4.3 Cultural and Tribal Cultural Resources

a) Would the proposed project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

The types of cultural resources that meet the definition of historical resources under CEQA Section 21084.1 generally consist of districts, sites, buildings, structures, and objects that are significant for their traditional, cultural, and/or historical associations. Under CEQA, both prehistoric and historic-period archaeological sites may qualify based on historical associations. As such, the two main historical resources that are subject to impact, and that may be adversely affected by the proposed project, are historical archaeological deposits and historical architectural resources. Impacts to archaeological resources are discussed under impact discussion (b). Therefore, this discussion focuses on potential impacts to architectural resources.

Each criterion is discussed in more depth below based on the Historic Resource Evaluation Report that was prepared in May 2023 by Forget Me Not History and is in Appendix C, *Historic Resources Evaluation*, of this Draft EIR.

Criterion 1 (Events)

By the time the Mountain View Police Services - Fire Administration building was completed in 1980, the block and surrounding neighborhood had already been developed with a mix of residential, commercial, and light industrial buildings for nearly a century. Similarly, the building was the third iteration of Police and Fire Department buildings in the immediate area, including the fire station completed along Franklin Street in 1924, and the police and fire stations constructed at the intersection of Franklin and Villa streets in the early 1950s. Furthermore, the design and construction of the building from 1977 to 1980 was overshadowed by protracted labor negotiations between the City and Police and Fire Departments, culminating with a contentious 39-day strike by the Mountain View Fire Department in mid-1980. As such, the Mountain View Police Services - Fire Administration building did not play a significant role in the history of the Police and Fire Departments and the expansion of municipal facilities in the City of Mountain View in the late twentieth century, and it did not spur new development in the surrounding area. Therefore, the building is recommended as ineligible for listing in the California Register under Criterion 1.

Criterion 2 (People)

A wide array of City of Mountain View staff has worked at the Mountain View Police Services - Fire Administration building since it opened in 1980. None are known to have made significant contributions to local, State, or national history. While Police Chief Robert K. Schatz and Fire Chief Robert B. Burns held key positions in their respective departments when the building was dedicated, their leadership does not rise to a level of significance under this criterion. Thus, the subject property is recommended as ineligible for listing in the California Register under Criterion 2.

4.3 Cultural and Tribal Cultural Resources

Criterion 3 (Design/Construction)

Architect Goodwin Steinberg is recognized as a master architect, and the Mountain View Police Services - Fire Administration building is a representative example of the large-scale civic projects that he designed during his 50-year career with his namesake firm. The building blends Shed architecture, expressed in the soaring multi-directional shed roofs and varied fenestration, with elements of regional Spanish Colonial Revival architecture, including the white-painted slump stone brick walls and clay tile roofing that soften the building's angularity. The prominent clock tower evokes mission-era bell towers. The incorporation of a broad entry plaza, extensive vegetation, and subtle transitions in the site's topography reflect his intent to create an inviting, open building within a campus-like setting. Furthermore, he integrated experimental active and passive solar technology in the building's design, while ultimately not successful, were nationally recognized as critical to addressing the 1970s energy crisis. The building's design would subsequently be featured in Architectural Record. Although it is less than 50 years old, the building meets the threshold for special consideration for listing in the California Register because sufficient time has passed to understand Steinberg's exemplary career and the history and significance of Shed architecture and experimental solar technology of that era. As such, the subject property is recommended as eligible for listing under Criterion 3 as the work of master architect Goodwin Steinberg.

Criterion 4 (Information Potential)

While Criterion 4 is generally applied to archaeological resources, it can be used to identify buildings with significant construction methods and other related physical information. The subject property is recommended as ineligible for listing in the California Register under this criterion because the experimental solar technology was removed from the building in the late 1980s. The majority of the building's construction material, including the concrete slump blocks, fenestration, and clay tile roofing, do not themselves embody important physical information.

Conclusion

Based on the analysis above, the Mountain View Police Services - Fire Administration building is recommended as eligible for listing in the California Register under Criterion 3 as a significant example of the work of master architect Goodwin Steinberg. The period of significance dates to 1980 when the building was completed, and the property retains its integrity despite the removal of the rooftop solar collectors in the late 1980s. As such, the property qualifies as a historical resource under CEQA. Due to the proposed removal of the building, the proposed project would result in a **significant** impact.

Impact CUL-1: The proposed project would remove the historical resource on the project site that is eligible for listing in the California Register under Criterion 3 as a significant example of the work of master architect Goodwin Steinberg.

Mitigation Measure CUL-1.1: The City shall have Historic American Building Survey Level II documentation completed for the Mountain View Police Services - Fire Administration building and its setting. To ensure public access, the City shall submit copies of the documentation to Mountain View Historical Association's History Center and the California Historical Resources Information System Northwest Information Center. This documentation shall include drawings, photographs, and a historical narrative:

- **Drawings:** Existing historic drawings of the historical resource shall be photographed with large-format negatives or photographically reproduced on Mylar. In the absence of existing drawings, full-measured drawings of the building's plan and exterior elevations shall be prepared prior to demolition.

- **Photographs:** Photo-documentation of the historical resource shall be prepared to Historic American Building Survey standards for archival photography, prior to demolition. Historic American Building Survey standards require large-format black-and-white photography, with the original negatives having a minimum size of four inches by five inches. Digital photography, roll film, film packs, and electronic manipulation of images are not acceptable. All film prints, a minimum of four inches by five inches, must be hand-processed according to the manufacturer's specifications and printed on fiber-base, single-weight paper and dried to a full gloss finish. A minimum of 12 photographs shall be taken, detailing the site, building exterior, building interior, and character-defining features. Photographs must be identified and labeled using Historic American Building Survey standards.

- **Historical Overview:** A professional meeting the Secretary of the Interior's Professional Qualification Standards in Architectural History or History shall assemble historical background information relevant to the historical resource.

The City of Mountain View shall verify compliance with this mitigation measure prior to the initiation of any site or building demolition or construction activities.

Mitigation Measure CUL-1.2: The City shall incorporate an exhibit or display of the Mountain View Police Services - Fire Administration building and a description of its historical significance into a publicly accessible portion of the proposed Public Safety Building. The display shall be developed with the assistance of one or more professionals experienced in creating such historical exhibits or displays.

Significance with Mitigation: Significant and unavoidable. Due to the inherent design of the proposed project, implementation of the proposed project would remove the Mountain View Police Services - Fire Administration building. Therefore, impacts would therefore be significant and unavoidable.

4.3 Cultural and Tribal Cultural Resources

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Archaeological deposits that meet the definition of historical resource under CEQA Section 21084.1 or CEQA Guidelines Section 15064.5 could be present within the project site and could be damaged or destroyed by ground-disturbing construction activities (e.g., site preparation and grading) associated with the proposed project. Should this occur, the ability of the deposits to convey their significance, either as containing information about prehistory or history, or as possessing traditional or cultural significance to Native American or other descendant communities, would be materially impaired.

The project site is not known to contain archeological resources, ethnographic sites, or Native American remains. However, ground-disturbing construction activities (e.g., site preparation, grading, excavation, and trenching for utilities) associated with the proposed project may result in unanticipated discoveries of cultural resources or the damage or destruction of previously undiscovered resources. Therefore, earth-disturbing activities conducted for the proposed project would have the potential to expose previously undiscovered subsurface archaeological resources, and the impact to archaeological resources has potential to be **significant**.

Impact CUL-2: Construction activities for the proposed project have the potential to cause a substantial adverse change in the significance of an archaeological resource pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15064.5.

> **Mitigation Measure CUL-2:** Project supervisors, contractors, and equipment operators shall participate in an Archaeological Resource Awareness Training, conducted by a Secretary of Interior-qualified archaeologist, to become familiar with the type of artifacts and features that could be encountered during project-related ground disturbing activities, as well as the procedures to follow if archaeological resources are unearthed during construction. If indigenous, prehistoric or historic-period cultural materials are unearthed during ground-disturbing activities, all work within 100 feet of the find shall halt until a qualified archaeologist and Native American representative can assess the significance of the find. The City and a qualified archaeologist, defined as one meeting the U.S. Secretary of the Interior's Professional Qualifications Standards for Archaeology, and a Native American representative shall be immediately informed of the discovery. Prehistoric and indigenous materials might include obsidian and chert-flaked stone tools (e.g., projectile points, knives, scrapers) or tool-making debris; culturally darkened soil ["midden"] containing heat-affected rocks and artifacts; stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); and battered-stone tools, such as hammerstones and pitted stones. Historic-period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse. If the find is determined to be potentially significant,

the archaeologist, in consultation with the Native American representative, shall develop a treatment plan that could include site avoidance, capping, or data recovery. If avoidance is not feasible, project impacts shall be mitigated in accordance with the recommendations of the archeologist, in coordination with the City, Native American representative, and pursuant to CEQA Guidelines Section 15126.4 (b)(3)(C), which requires implementation of a data recovery plan. Once the recovery plan has been reviewed and approved by the City, implemented, and any appropriate resource recovery completed, project construction activity within the area of the find may resume.

Significance with Mitigation: Less than significant.

c) Would the project disturb any human remains, including those interred outside of dedicated cemeteries?

Previously undiscovered human remains associated with pre-contact archaeological deposits may exist within the project site, as ground-disturbing activities sometimes uncover such previously unrecorded remains. As discussed under impact discussion (b), ground-disturbing activities and excavation for the proposed project would have the potential to uncover buried resources. It is possible that human remains may be present on the project site. Descendant communities may ascribe religious or cultural significance to such remains, making any such disturbances a **significant** impact.

Impact CUL-3: Construction activities for the proposed project have the potential to result in unanticipated discovery of human remains interred outside of dedicated cemeteries.

Mitigation Measure CUL-3: In the event of the discovery of human remains during demolition, excavation, or construction, there shall be no further excavation or disturbance of the site within a 50-foot radius of the location of such discovery, or any nearby area reasonably suspected to overlie adjacent remains, and the area shall be secured to prevent further disturbance. The City and the Santa Clara County Coroner shall be notified and shall make a determination as to whether the remains are Native American. If the Coroner determines that the remains are not subject to their authority, the Coroner shall notify the Native American Heritage Commission within 24 hours, which shall attempt to identify descendants of the deceased Native American. If no satisfactory agreement can be reached as to the disposition of the remains pursuant to this State law, then the landowner, in consultation with a qualified archaeologist, shall formulate an appropriate treatment plan for the find, which might include, but not be limited to, respectful scientific recording and removal, being left in place, removal and reburial on-site, or elsewhere. Associated grave goods are to be treated in the same manner. A final report shall be submitted to the City's Community Development Director prior to release of a Certificate of Occupancy. This report shall contain a description of

the mitigation programs and its results, including a description of the monitoring and testing resources analysis methodology and conclusions, and a description of the disposition/curation of the resources. The report shall verify completion of the mitigation program to the satisfaction of the City's Community Development Director.

Significance with Mitigation: Less than significant.

d) Would the proposed project cause a substantial adverse change in the significance of a Tribal Cultural Resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is: 1) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or 2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resource Code Section 5024.1. In applying the criteria set forth in subdivision (c) of the Public Resource Code Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance to a California Native American tribe?

As discussed in impact discussions (b) and (c), no known archeological resources, ethnographic sites, or Native American remains are located on the project site. However, as discussed under impact discussion (b), the project site could contain undiscovered subsurface archaeological deposits, including unrecorded Native American prehistoric archaeological materials. As discussed under impact discussion (b) and (c), ground-disturbing activities associated with the project have the potential to unearth unknown human remains. Therefore, although no known tribal cultural resources have been identified on the project site, the proposed project has the potential to disturb subsurface deposits possessing traditional or cultural significance to Native American or other descendant communities. This is considered a **significant** impact.

Impact CUL-4: Construction activities for the proposed project have the potential to cause a significant impact to an unknown tribal cultural resource as defined in Public Resources Code 21074.

Mitigation Measure CUL-4: Implement Mitigation Measures CUL-2 and CUL-3.

Significance with Mitigation: Less than significant.

4.3.5 Cumulative Impact Analysis

This analysis considers potential impacts of the proposed project when considered along with the potential impacts of the cumulative development projects listed in Table 4-1, *Cumulative*

Projects List. Cumulative cultural resource impacts would occur when a series of actions leads to the loss of a substantial type of site, building, or resource. For example, while the loss of a single historic building may not be significant to the character of a neighborhood or streetscape, continued loss of such resources on a project-by-project basis could constitute a significant cumulative effect. This is most obvious in historic districts, where destruction or alteration of a percentage of the contributing elements may lead to a loss of integrity for the district overall. For example, changes to the setting or atmosphere of an area by adding modern structures on all sides of a historically significant building, thus altering the aesthetics of the streetscape, would create a significant impact. Destruction or relocation of historic buildings would also significantly impact the setting.

As described in impact discussion (a), the proposed project would result in a significant and unavoidable impact due to project implementation removing the historical resource on the project site that is eligible for listing in the California Register under Criterion 3 as a significant example of the work of master architect Goodwin Steinberg. The proposed project could result in a cumulative impact to historic resources if other cumulative development projects would also result in impacts to historical resources.

The planning areas for the two planning projects listed in Table 4-1 (i.e., the Downtown Precise Plan Comprehensive Update and Moffett Boulevard Precise Plan) contain historic resources; however, none of the properties subject to current development sites (as listed in Table 4-1) are on the City of Mountain View's Register of Historic Resources.[3] Cumulative impacts to historic resources would be reduced through adherence to precise plan standards intended to protect historic resources, and would also be reduced through compliance with the City's General Plan policies listed in Table 4.3-1, *City of Mountain View 2030 General Plan Policies Relevant to Cultural Resources*, and adherence to federal and State laws described in Section 4.3.1, *Regulatory Background*. The City's 2030 General Plan EIR identifies less-than-significant impacts to historic resources as a result of implementation of the City's policies and actions to reduce such impacts. Therefore, the proposed project's project-level significant and unavoidable impact to the on-site historic resource would not, in combination with cumulative development projects, result in a significant cumulative impact.

Similar to the proposed project, cumulative development projects could result in impacts to known or unknown subsurface cultural resources that may be on-site. The construction from cumulative development could involve ground disturbance below the level of previous ground disturbance that could result in the discovery of archaeological resources or human remains. Due to the built-out nature of the project area, cumulative development projects would occur in the form of infill/intensification on sites either already developed and/or underutilized; this reduces the likelihood of encountering potential archaeological resources or human remains on-

[3] City of Mountain View, 2022, Mountain View Register of Historic Resources, https://www.mountainview.gov/home/showpublisheddocument/7915/638346084894870000, accessed April 1, 2025.

4.3 Cultural and Tribal Cultural Resources

site unless ground disturbance activities excavate to a greater extent than previously. The existing federal, State, and local regulations and policies described throughout this chapter serve to protect any as-yet-undiscovered cultural resources. Continued compliance with these regulations and implementation of existing policies and requirements, and site-specific protocols in the event of accidental recovery of cultural resources, would preclude cumulative impacts to the maximum extent practicable.

Therefore, in combination with past, present, and reasonably foreseeable projects, the proposed project would result in a **less-than-significant** cumulative impact with respect to all cultural resources.

Significance without Mitigation: Less than significant.

4.4 GEOLOGY AND SOILS

This section of the Draft Environmental Impact Report (EIR) evaluates the potential for implementation of the proposed project to impact geological and soil resources. As described in Chapter 2, *Introduction*, of this Draft EIR, the only significance criteria identified in the California Environmental Quality Act (CEQA) Guidelines that are evaluated in this chapter include potential impacts related to seismic-related ground failure, including liquefaction, and unstable soils. Therefore, this chapter only addresses these two issues.

4.4.1 Regulatory Background

FEDERAL AND STATE

Seismic Hazards Mapping Act

The Seismic Hazards Mapping Act, which was passed by the California legislature in 1990, addresses earthquake hazards related to liquefaction and seismically induced landslides. Under the Act, seismic hazard zones are mapped by the State Geologist in order to assist local governments in land use planning. The Act states that "it is necessary to identify and map seismic hazard zones in order for cities and counties to adequately prepare the safety element of their general plans and to encourage land use management policies and regulations to reduce and mitigate those hazards to protect public health and safety." Section 2697(a) of the act states that "cities and counties shall require, prior to the approval of a project located in a seismic hazard zone, a geotechnical report defining and delineating any seismic hazard."

California Building Code

The California Building Code (CBC), known as the California Building Standards Code, is found in Title 24 of the California Code of Regulations. The CBC incorporates the International Building Code, a model building code adopted in jurisdictions across the United States. Current State law requires every local agency enforcing building regulations, such as cities and counties, to adopt the provisions of the CBC within 180 days of its publication. The publication date of the CBC is established by the California Building Standards Commission. The CBC is updated every three years. The CBC provides minimum standards to protect property and the public welfare and safety by regulating the design and construction of excavations, foundations, building frames, retaining walls, and other building elements to mitigate the effects of seismic shaking and adverse soil conditions. The CBC contains provisions for earthquake safety based on factors including occupancy type, the types of soil and rock on-site, and the strength of ground motion with a specified probability of occurring at the site. Also, the CBC requires the preparation of project-specific geotechnical/engineering reports by a certified engineering geologist and/or geotechnical engineer prior to construction of proposed structures.

4.4 Geology and Soils

LOCAL

The Mountain View Municipal Code contains all ordinances for the city. The Municipal Code is organized by Chapter, Article, Division, and Section.

Article I, *Building Code*, of Chapter 8, *Buildings*, adopts the CBC by reference with specified modifications. The City of Mountain View's Building Inspection Department, which is part of the Community Development Department, is responsible for reviewing plans, issuing building permits and conducting field inspections.

4.4.2 Existing Conditions

Geological and soil conditions in an area can influence the shaking effects of an earthquake. Seismic shaking (or ground shaking) is a general term referring to all aspects of motion of the earth's surface resulting from an earthquake and is normally the major cause of damage in seismic events.

Liquefaction is the rapid transformation of saturated, loose, fine-grained sediment to a fluid-like state because of earthquake ground shaking. In the process, the soil undergoes transient loss of strength, which commonly causes ground displacement or ground failure to occur. In general, where there is any potential for liquefaction, site-specific studies are needed to determine the extent of the hazard if development were to occur in the area.

Lateral spreading is a form of horizontal displacement of soil toward an open channel or other "free" face, such as an excavation boundary. Lateral spreading can result from either the slump of low cohesion unconsolidated material or more commonly by liquefaction of either the soil layer or a subsurface layer underlying soil material on a slope, resulting in gravitationally driven movement. Lateral spreading (lurching) may also occur where open banks and unsupported cut slopes provide a free face. Ground shaking, especially when inducing liquefaction, may cause lateral spreading toward unsupported slopes. Areas most prone to lateral spreading are those that consist of fill material that has been improperly engineered, that have steep, unstable banks, and that have high groundwater tables.

Damage caused by liquefaction and lateral spreading is generally the most severe when liquefaction occurs within 15 to 20 feet of the ground surface. According to the Mountain View General Plan EIR, most of Mountain View, is underlain by materials that have moderate to very high liquefaction potential. A Seismic Hazard Zone for liquefaction has been determined for the areas adjacent to most creek channels and all portions of the city roughly one-half mile north of El Camino Real, which includes the project site.[1]

[1] City of Mountain View, 2012, Draft 2030 General Plan and Greenhouse Gas Reduction Program Environmental Impact Report, State Clearinghouse No. 2011012069, pages 336 - 337.

4.4.3 Significance Criteria

The Initial Study prepared for this Draft EIR (see Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments*) identified that the proposed project would not result in a significant impact for the following significance criteria:

- Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
  - Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map, issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.
  - Strong seismic ground shaking?
  - Landslides?
- Would the project result in substantial soil erosion or the loss of topsoil?
- Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?
- Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?
- Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

The proposed project would have a significant impact under Appendix G, *Environmental Checklist Form*, of the California Environmental Quality Act (CEQA) Guidelines if it would:

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction.

b) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse.

4.4.4 Project Impact Analysis

The following impact analysis addresses thresholds of significance for which the Initial Study disclosed potentially significant impacts.

4.4 Geology and Soils

a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?

The proposed project would replace the existing Mountain View Police Services - Fire Administration building with a new Public Safety Building with the same local community-serving use and purpose for the residents of Mountain View. The proposed project would include demolition of the existing structures and surface parking facilities, and construction of new facilities and surface parking lots. No excavation is proposed except for trenching for utilities.

Because the project site, like much of California, is in a seismically active area and on a site with known liquefaction hazards, the project sponsor would be required to prepare a site-specific geologic technical study pursuant to the required mitigation identified in the General Plan EIR. As found in the General Plan EIR, with the preparation of a site-specific geologic technical study by a certified engineering geologist and/or geotechnical engineer prior to construction of proposed structures, and implementation of the recommendations of the study, impacts would be less-than-significant.[2]

With respect to lateral spreading, as described in Section 4.4.2, *Existing Conditions*, ground shaking, especially when inducing liquefaction, may cause lateral spreading toward unsupported slopes. However, the proposed project does not propose any deep excavation such as a subterranean level for parking, or other uses, that would involve an unsupported slope and therefore the risk associated with lateral spreading would be low. However, the findings of the required geotechnical study would address any concerns from hazards due to lateral spreading.

Furthermore, the proposed project would be subject to compliance with the CBC, which is adopted with modifications by the City in Municipal Code Article I, *Building Code*, of Chapter 8, *Buildings*. The CBC provides minimum standards to protect property and the public welfare and safety by regulating the design and construction of excavations, foundations, building frames, retaining walls, and other building elements to mitigate the effects of seismic shaking and adverse soil conditions. The CBC contains provisions for earthquake safety based on factors including occupancy type, the types of soil and rock on-site, and the strength of ground motion with a specified probability of occurring at the site. Also, the CBC requires the preparation of project-specific geotechnical/engineering reports by a certified engineering geologist and/or geotechnical engineer prior to construction of proposed structures. The proposed project would be required to comply with the recommendations in these reports. Any structures built for the proposed project would adhere to the most recent version of the CBC.

[2] City of Mountain View, 2012, Draft 2030 General Plan and Greenhouse Gas Reduction Program Environmental Impact Report, State Clearinghouse No. 2011012069, page 345.

The proposed project involves on-site construction activities and development of new structures on a site with existing seismic and soils hazards. In addition, the proposed project involves an increase in the occupancy of the project site (due to the proposed increase in on-site employment), which would expose additional people to these existing hazards when compared to existing conditions. Because no site-specific geotechnical study has been prepared for the project, impacts are considered **significant** without mitigation.

Impact GEO-1: The construction activities, increased site occupancy, and development of new structures under the proposed project could exacerbate an existing hazard associated with liquefaction due to seismic events.

> **Mitigation Measure GEO-1:** Prior to the issuance of building permits, the project sponsor shall retain the services of a certified engineering geologist and/or geotechnical engineer to prepare a site-specific geotechnical study based on the most recent draft of the conceptual site plans. The geotechnical study shall address, but is not limited to, the effects of seismically induced liquefaction, and include recommendations to ensure any potential hazards related to the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction would not occur. The geotechnical study shall be approved by the City of Mountain View's Building Inspection Department prior to the issuance of building permits.
>
> **Significance with Mitigation:** Less than significant.

b) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

As described in impact discussion (a), the project site is in a seismically active area, as is much of California, and on a site with known liquefaction hazards. Due to the low relief of the on- and off-site topography, earthquake-induced slope stability is not an issue on the project site. Further, the proposed project would not include any subterranean levels and, as such, no deep excavation would occur. Accordingly, impacts associated with lateral spreading or subsidence, would not be an issue.

Implementation of Mitigation Measure GEO-1 requires the preparation of a project-specific geotechnical/engineering reports by a certified engineering geologist and/or geotechnical engineer prior to construction of proposed structures to ensure that any effects due to unstable soils would be mitigated to a less-than-significant level. As described under impact discussion (a), the proposed project involves on-site construction activities, development of new structures, and an increase in site occupancy that would expose additional people to existing liquefaction hazards. Without mitigation, this impact would be considered **significant**.

4.4 Geology and Soils

Impact GEO-2 The construction activities, development, increased site occupancy involved in the proposed project could exacerbate an existing hazard associated with unstable soils due to seismically induced liquefaction.

Mitigation Measure GEO-2: Implement Mitigation Measure GEO-1.

Significance with Mitigation: Less than significant.

4.4.5 Cumulative Impact Analysis

The cumulative setting includes the projects listed in Table 4-1, *Cumulative Projects List*, in Chapter 4, *Environmental Analysis*. As discussed previously, construction and operation of the proposed project would not result in significant impacts related to geology and soils with implementation of Mitigation Measure GEO-1 and GEO-2. Although the project site and surrounding area include some hazards due to liquefaction soils, mandatory compliance with CBC and the Municipal Code would ensure these impacts would be addressed through site-specific development requirements.

Cumulative development on the sites listed in Table 4-1 would be subject to the same regulations as the proposed project. Because impacts associated with geology and soils are by their nature focused on specific sites or areas, the less-than-significant impacts with implementation of Mitigation Measure GEO-1 and GEO-2 to avoid seismically induced hazards, and impacts from the proposed project would not contribute to a cumulative increase in hazards in the project vicinity or greater Mountain View area. Therefore, cumulative impacts associated with geology and soils would be **less than significant**.

Significance without Mitigation: Less than significant.

4.5 GREENHOUSE GAS EMISSIONS

This section of the Draft Environmental Impact Report (EIR) evaluates the potential for the adoption and implementation of the proposed project to impact greenhouse gas (GHG) emissions in a local and regional context. Because no single project is large enough to result in a measurable increase in global concentrations of GHG, climate change impacts of a project are considered on a cumulative basis based on the GHG emissions reduction goals identified in the California Air Resources Board's (CARB) 2022 Scoping Plan.

Modeling data is included in Appendix B, *Air Quality and Greenhouse Gas Emissions Data*, of this Draft Environmental Impact Report (EIR).

Environmental Setting

TERMINOLOGY

The following are definitions for terms used throughout this chapter.

- **Greenhouse gases (GHG).** Gases in the atmosphere that absorb infrared light, thereby retaining heat in the atmosphere and contributing to a greenhouse effect.
- **Global warming potential (GWP).** Metric used to describe how much heat a molecule of a GHG absorbs relative to a molecule of carbon dioxide (CO_2) over a given period of time (20, 100, and 500 years). CO_2 has a GWP of 1.
- **Carbon dioxide-equivalent (CO_2e).** The standard unit to measure the amount of GHGs in terms of the amount of CO_2 that would cause the same amount of warming. CO_2e is based on the GWP ratios between the various GHGs relative to CO_2.
- **$MTCO_2e$.** Metric ton of CO_2e.
- **$MMTCO_2e$.** Million metric tons of CO_2e.

GREENHOUSE GASES AND CLIMATE CHANGE

Scientists have concluded that human activities are contributing to global climate change by adding large amounts of heat-trapping gases, known as GHGs, to the atmosphere. The primary source of these GHGs is fossil fuel use. The Intergovernmental Panel on Climate Change (IPCC) has identified four major GHGs—water vapor, carbon dioxide (CO_2), methane (CH_4), and ozone (O_3)—that are the likely cause of an increase in global average temperatures observed in the 20th and 21st centuries. Other GHGs identified by the IPCC that contributes to global warming to a lesser extent are nitrous oxide (N_2O), sulfur hexafluoride (SF_6), hydrofluorocarbons,

4.5 Greenhouse Gas Emissions

perfluorocarbons, and chlorofluorocarbons.[1,2,3] The major GHGs applicable to the proposed project are briefly described herein.

- **Carbon dioxide (CO_2)** enters the atmosphere through the burning of fossil fuels (i.e., oil, natural gas, and coal), solid waste, trees and wood products, and respiration, and also as a result of other chemical reactions (e.g., manufacture of cement). Carbon dioxide is removed from the atmosphere (i.e., sequestered) when it is absorbed by plants as part of the biological carbon cycle.
- **Methane (CH_4)** is emitted during the production and transport of coal, natural gas, and oil. Methane emissions also result from livestock and other agricultural practices and from the decay of organic waste in landfills and water treatment facilities.
- **Nitrous oxide (N_2O)** is emitted during agricultural and industrial activities as well as during the combustion of fossil fuels and solid waste.

GHGs are dependent on the lifetime, or persistence, of the gas molecule in the atmosphere. Some GHGs have stronger greenhouse effects than others. These are referred to as high GWP gases. The GWP is used to convert GHGs to CO_2-equivalence (CO_2e) to show the relative potential that different GHGs have to retain infrared radiation in the atmosphere and contribute to the greenhouse effect. For example, under the IPCC Fifth Assessment Report (AR5) GWP values for CH_4, 10 MT of CH_4 would be equivalent to 280 MT of CO_2.

4.5.1 Regulatory Background

FEDERAL

The U.S. Environmental Protection Agency (USEPA) announced on December 7, 2009, that GHG emissions threaten the public health and welfare of the American people and that GHG emissions from on-road vehicles contribute to that threat. The USEPA's final findings respond to the 2007 U.S. Supreme Court decision that GHG emissions fit within the Clean Air Act definition

[1] Intergovernmental Panel on Climate Change, 2001, *Third Assessment Report: Climate Change 2001*, New York: Cambridge University Press.

[2] Water vapor (H_2O) is the strongest GHG and the most variable in its phases (vapor, cloud droplets, ice crystals); however, water vapor is not considered a pollutant because it is considered part of the feedback loop rather than a primary cause of change.

[3] Black carbon contributes to climate change both directly, by absorbing sunlight, and indirectly, by depositing on snow (making it melt faster) and by interacting with clouds and affecting cloud formation. Black carbon is the most strongly light-absorbing component of particulate matter (PM) emitted from burning fuels such as coal, diesel, and biomass. The share of black carbon emissions from transportation is dropping rapidly and is expected to continue to do so between now and 2030 as a result of California's air quality programs. The remaining black carbon emissions will come largely from woodstoves/fireplaces, off-road applications, and industrial/commercial combustion (CARB, December 2022, 2022 Scoping Plan for Achieving Carbon Neutrality. https://ww2.arb.ca.gov/sites/default/files/2023-04/2022-sp.pdf). However, State and national GHG inventories do not include black carbon due to ongoing work resolving the precise global warming potential of black carbon. Guidance for CEQA documents does not yet include black carbon.

of air pollutants. The findings do not impose any emission reduction requirements but allowed the USEPA to finalize the GHG standards proposed in 2009 for new light-duty vehicles as part of the joint rulemaking with the Department of Transportation.[4]

To regulate GHGs from passenger vehicles, the USEPA was required to issue an endangerment finding.[5] The finding identified emissions of six key GHGs—CO_2, CH_4, N_2O, hydrofluorocarbons, perfluorocarbons, and SF_6—that have been the subject of scrutiny and intense analysis for decades by scientists in the United States and around the world. The first three are applicable to the proposed project's GHG emissions inventory because they constitute the majority of GHG emissions and, according to guidance by the Bay Area Air District (Air District), are the GHG emissions that should be evaluated as part of a project's GHG emissions inventory.

US Mandatory Report Rule for GHGs (2009)

In response to the endangerment finding, the USEPA issued the Mandatory Reporting of GHG Rule that requires substantial emitters of GHG emissions (e.g., large stationary sources) to report GHG emissions data. Facilities that emit 25,000 MT or more of CO_2e per year are required to submit an annual report.

Update to Corporate Average Fuel Economy Standards (2017 to 2026)

The federal government issued new Corporate Average Fuel Economy (CAFE) standards in 2012 for vehicle model years 2017 to 2025, requiring a fleet average of 54.5 miles per gallon (MPG) in 2025. However, on March 30, 2020, the USEPA finalized updated CAFE and GHG emissions standards for passenger cars and light trucks, covering model years 2021 through 2026, known as the Safer Affordable Fuel Efficient (SAFE) Vehicles Final Rule for Model Years 2021 to 2026. Under SAFE, the fuel economy standards will increase 1.5 percent per year compared to the 5 percent per year under the CAFE standards established in 2012. Overall, SAFE requires a fleet average of 40.4 MPG for model year 2026 vehicles (85 Federal Register 24174 (April 30, 2020)).

On December 21, 2021, under the direction of Executive Order (EO) 13990 issued by President Biden, the National Highway Traffic Safety Administration (NHTSA) repealed SAFE Vehicles Rule Part One, which had preempted state and local laws related to fuel economy standards. In addition, the NHTSA announced new proposed fuel standards on March 31, 2022. Fuel efficiency under the new standards proposed will increase 8 percent annually for model years 2024 to 2025 and 10 percent for model year 2026. Overall, the new CAFE standards require a

[4] US Environmental Protection Agency, December 2009, EPA: Greenhouse Gases Threaten Public Health and the Environment: Science Overwhelmingly Shows Greenhouse Gas Concentrations at Unprecedented Levels due to Human Activity, https://archive.epa.gov/epapages/newsroom_archive/newsreleases/08d11a451131bca585257685005bf252.html

4.5 Greenhouse Gas Emissions

fleet average of 49 MPG for passenger vehicles and light trucks for model year 2026, which would be a 10 MPG increase relative to model year 2021.[6]

STATE

Current State of California guidance and goals for reductions in GHG emissions are generally embodied in EO S-03-05, EO B-30-15, EO B-55-18, Assembly Bill (AB) 32, AB 1279, Senate Bill (SB) 32, and SB 375.

Executive Order S-03-05

EO S-03-05 was signed June 1, 2005, and set the following GHG reduction targets for the State:2000 levels by 2010, 1990 levels by 2020, and 80 percent below 1990 levels by 2050.

Assembly Bill 32, the Global Warming Solutions Act (2006)

AB 32 was passed by the California State legislature on August 31, 2006, to place the state on a course toward reducing its contribution of GHG emissions. AB 32 follows the 2020 tier of emissions reduction targets established in EO S-03-05. CARB prepared the 2008 Scoping Plan to outline a plan to achieve the GHG emissions reduction targets of AB 32.

Executive Order B-30-15

EO B-30-15, signed April 29, 2015, set a goal of reducing GHG emissions in the state to 40 percent of 1990 levels by year 2030. EO B-30-15 also directed CARB to update the Scoping Plan to quantify the 2030 GHG reduction goal for the State and requires State agencies to implement measures to meet the interim 2030 goal as well as the long-term goal for 2050 in EO S-03-05. It also requires the Natural Resources Agency to conduct triennial updates of the California adaption strategy, *Safeguarding California*, in order to ensure climate change is accounted for in State planning and investment decisions.

Senate Bill 32 and Assembly Bill 197

In September 2016, SB 32 and AB 197 were signed into law, making the EO goal for year 2030 into a statewide mandated legislative target. AB 197 established a joint legislative committee on climate change policies and requires CARB to prioritize direct emissions reductions rather than the market-based cap-and-trade program for large stationary, mobile, and other sources.

[6] National Highway Traffic Safety Administration, April 2022, USDOT Announces New Vehicle Fuel Economy Standards for Model year 2024-2026, https://www.nhtsa.gov/press-releases/usdot-announces-new-vehicle-fuel-economy-standards-model-year-2024-2026, accessed May 20, 2024.

Executive Order B-55-18

EO B-55-18, signed September 10, 2018, sets a goal "to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter." EO B-55-18 directs CARB to work with relevant State agencies to ensure future scoping plans identify and recommend measures to achieve the carbon neutrality goal. The goal of carbon neutrality by 2045 is in addition to other State goals, meaning not only should emissions be reduced to 80 percent below 1990 levels by 2050, but that, by no later than 2045, the remaining emissions be offset by equivalent net removals of CO_2e from the atmosphere, including through sequestration in forests, soils, and other natural landscapes.

Assembly Bill 1279

AB 1279, signed in September 2022, codifies the carbon neutrality targets of EO B-55-18 for year 2045 and sets a new legislative target for year 2045 of 85 percent below 1990 levels for anthropogenic GHG emissions. CARB was required to update the Scoping Plan to identify and recommend measures to achieve the net-zero and GHG emissions-reduction goals.

2022 Climate Change Scoping Plan

CARB adopted the *2022 Scoping Plan for Achieving Carbon Neutrality* (2022 Scoping Plan) on December 15, 2022, which lays out a path to achieve carbon neutrality by 2045 or earlier and to reduce the state's anthropogenic GHG emissions.[7] The Scoping Plan was updated to address the carbon neutrality goals of EO B-55-18 and the ambitious GHG reduction target as directed by AB 1279. Previous scoping plans focused on specific GHG reduction targets for industrial, energy, and transportation sectors—to meet 1990 levels by 2020, and then the more aggressive 40 percent below that for the 2030 target. This Plan expands upon earlier scoping plans with a target of reducing anthropogenic emissions to 85 percent below 1990 levels by 2045. Carbon neutrality takes it one step further by expanding actions to capture and store carbon, including through natural and working lands and mechanical technologies, while drastically reducing anthropogenic sources of carbon pollution at the same time. The path forward was informed by the recent IPCC AR6; the measures would achieve 85 percent below 1990 levels by 2045 in accordance AB 1279.

Senate Bill 375

SB 375, the Sustainable Communities and Climate Protection Act, was adopted in 2008 to connect the GHG emissions reduction targets established in the 2008 Scoping Plan for the transportation sector to local land use decisions that affect travel behavior. Its intent is to reduce GHG emissions from light-duty trucks and automobiles (i.e., excluding emissions

[7] California Air Resources Board, December 2022, 2022 Scoping Plan for Achieving Carbon Neutrality, https://ww2.arb.ca.gov/sites/default/files/2023-04/2022-sp.pdf.

associated with goods movement) by aligning regional long-range transportation plans, investments, and housing allocations to local land use planning to reduce VMT and vehicle trips. Specifically, SB 375 required CARB to establish GHG emissions reduction targets for each of the 18 metropolitan planning organizations (MPO). The Metropolitan Transportation Commission (MTC) is the MPO for the Bay Area region, which includes the City of Mountain View. Pursuant to the recommendations of the Regional Transportation Advisory Committee, CARB adopted per capita reduction targets for each of the MPOs rather than a total magnitude reduction target.

CARB is required to update the targets for the MPOs every eight years. In June 2017, CARB released updated targets and technical methodology, and then released another update in February 2018, which became effective in October 2018. CARB adopted the updated targets and methodology on March 22, 2018. All SCSs adopted after October 1, 2018, are subject to these new targets. The updated targets consider the need to further reduce VMT, as identified in the 2017 Scoping Plan Update, while balancing the need for additional and more flexible revenue sources to incentivize positive planning and action toward sustainable communities. The updated SB 375 targets are in units of percent per capita reduction in GHG emissions from automobiles and light trucks compared to 2005. This excludes reductions anticipated from implementation of State technology and fuels strategies and any potential future State strategies such as statewide road user pricing. The updated targets call for greater per-capita GHG emission reductions from SB 375 than were currently in place, which for 2035 translates into updated targets that either match or exceed the emission reduction levels in the MPOs' currently adopted SCSs. CARB's updated targets result in an additional reduction of over 8 $MMTCO_2e$ in 2035 compared to the prior targets.[8]

Transportation Sector Specific Regulations

Advanced Clean Fleets and Advanced Clean Trucks

CARB adopted the Advanced Clean Fleets (ACF) regulation in 2023 to accelerate the transition to zero-emission medium- and heavy-duty vehicles. In conjunction with the Advanced Clean Trucks (ACT) regulation, the ACF regulations helps to ensure that medium- and heavy-duty ZEVs are brought to the market, by requiring certain fleets to purchase ZEVs. The ACF ZEV phase-in approach provides initial focus where the best fleet electrification opportunities exist, sets clear targets for regulated fleets to make a full conversion to ZEVs, and creates a catalyst to accelerate development of a heavy-duty public charging infrastructure network.

Assembly Bill 1493

California vehicle GHG emission standards were enacted under AB 1493 (Pavley I). Pavley I is a clean-car standard that reduces GHG emissions from new passenger vehicles (light-duty auto to

[8] California Air Resources Board, February 2018, Proposed Update to the SB 375 Greenhouse Gas Emission Reduction Targets. https://ww2.arb.ca.gov/sites/default/files/2020-06/SB375_Updated_Final_Target_Staff_Report_2018.pdf.

medium-duty vehicles) from 2009 through 2016 and was anticipated to reduce GHG emissions from new passenger vehicles by 30 percent in 2016. California implements the Pavley I standards through a waiver granted to California by the USEPA. In 2012, the USEPA issued a Final Rulemaking that set even more stringent fuel economy and GHG emissions standards for model years 2017 through 2025 light-duty vehicles. (See also the discussion in federal regulations under "*Update to Corporate Average Fuel Economy Standards [2017 to 2026]*.")

In January 2012, CARB approved the Advanced Clean Cars program (formerly known as Pavley II) for model years 2017 through 2025. The program combines the control of smog, soot, and GHGs with requirements for greater numbers of ZEVs into a single package of standards. Under California's Advanced Clean Car program, by 2025 new automobiles will emit 34 percent less GHG emissions and 75 percent less smog-forming emissions.

Executive Order S-01-07

On January 18, 2007, the State set a new low carbon fuel standard (LCFS) for transportation fuels sold in the state. EO S-01-07 set a declining standard for GHG emissions measured in CO_2e gram per unit of fuel energy sold in California. The LCFS required a reduction of 2.5 percent in the carbon intensity of California's transportation fuels by 2015 and a reduction of at least 10 percent by 2020. The standard applied to refiners, blenders, producers, and importers of transportation fuels, and used market-based mechanisms to allow these providers to choose the most economically feasible methods for reducing emissions during the "fuel cycle."

Executive Order B-16-2012

On March 23, 2012, the State directed CARB, the California Energy Commission (CEC), the Public Utilities Commission, and other relevant agencies to work with the Plug-in Electric Vehicle Collaborative and the California Fuel Cell Partnership to establish benchmarks to accommodate ZEVs in major metropolitan areas, including infrastructure to support them (e.g., EV charging stations). EO B-16-2012 also directed the number of ZEVs in California's State vehicle fleet to increase through the normal course of fleet replacement so that at least 10 percent of fleet purchases of light-duty vehicles are ZE by 2015 and at least 25 percent by 2020. The EO also established a target for the transportation sector of reducing GHG emissions to 80 percent below 1990 levels.

Executive Order N-79-20

On September 23, 2020, Governor Newsom signed EO N-79-20, establishing a goal that 100 percent of in-state sales of new passenger cars and trucks will be ZE by 2035. Additionally, the fleet goals for trucks are that 100 percent of drayage trucks are ZE by 2035, and 100 percent of medium- and heavy-duty vehicles in the state are ZE by 2045, where feasible. The EO's goal for the State is to transition to 100 percent ZE off-road vehicles and equipment by 2035, where feasible.

4.5 Greenhouse Gas Emissions

Renewables Portfolio: Carbon Neutrality Regulations

Senate Bills 1078, 107, and X1-2 and Executive Order S-14-08

A major component of California's Renewable Energy Program is the renewables portfolio standard established under Senate Bills 1078 (Sher) and 107 (Simitian). Under the RPS, certain retail sellers of electricity were required to increase the amount of renewable energy each year by at least 1 percent in order to reach at least 20 percent by December 30, 2010. EO S-14-08, signed in November 2008, expanded the State's renewable energy standard to 33 percent renewable power by 2020. This standard was adopted by the legislature in 2011 (SB X1-2). Eligible renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas. The increase in renewable sources for electricity production decreases indirect GHG emissions from development projects because electricity production from renewable sources is generally considered carbon neutral.

Senate Bill 350

SB 350 was signed into law in September 2015 and establishes tiered increases to the RPS—40 percent by 2024, 45 percent by 2027, and 50 percent by 2030. SB 350 also set a new goal to double the energy-efficiency savings in electricity and natural gas through energy efficiency and conservation measures.

Senate Bill 100

On September 10, 2018, SB 100 was signed into law. Under SB 100, the RPS for public-owned facilities and retail sellers consists of 44 percent renewable energy by 2024, 52 percent by 2027, and 60 percent by 2030. SB 100 also established a new RPS requirement of 50 percent by 2026. Furthermore, the bill establishes an overall State policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all State agencies by December 31, 2045. Under the bill, the State cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

Senate Bill 1020

SB 1020 was signed into law on September 16, 2022. SB 1020 provides interim RPS targets (90 percent renewable energy by 2035 and 95 percent renewable energy by 2040) and requires renewable energy and zero-carbon resources to reach 100 percent clean electricity by 2045.

Energy Efficiency Regulations

California Building Code: Building Energy Efficiency Standards

Energy conservation standards for new residential and nonresidential buildings were adopted by the California Energy Resources Conservation and Development Commission (now the CEC) in June 1977 (Title 24, Part 6, of the California Code of Regulations [CCR]). Title 24 requires the design of building shells and building components to conserve energy. The standards are updated periodically to allow for the consideration and possible incorporation of new energy efficiency technologies and methods.

The Building Energy Efficiency Standards encourage efficient electric heat pumps, establish electric-ready requirements for new construction, expand solar photovoltaic and battery storage standards, and strengthen ventilation standards, among other approaches. The 2022 standards require mixed-fuel single-family homes to be electric-ready to accommodate replacement of gas appliances with electric appliances. In addition, the new standards include prescriptive photovoltaic system and battery energy storage system requirements for high-rise, multi-family buildings (i.e., more than three stories) and noncommercial buildings such as hotels, offices, medical offices, restaurants, retail stores, schools, warehouses, theaters, and convention centers.

California Building Code: CALGreen

The California Green Building Standards Code (24 CCR, Part 11, known as "CALGreen") was adopted as part of the California Building Standards Code. CALGreen established planning and design standards for sustainable site development, energy efficiency (in excess of the California Energy Code requirements), water conservation, material conservation, and internal air contaminants.[9] The mandatory provisions of CALGreen became effective January 1, 2011, and were last updated in 2022. The 2022 CALGreen standards became effective on January 1, 2023.

2006 Appliance Efficiency Regulations

The 2006 Appliance Efficiency Regulations (20 CCR Sections 1601–1608) were adopted by the CEC on October 11, 2006, and approved by the California Office of Administrative Law on December 14, 2006. The regulations include standards for both federally regulated appliances and non–federally regulated appliances. Though these regulations are now often viewed as "business as usual," they exceed the standards imposed by all other states, and they reduce GHG emissions by reducing energy demand.

[9] The green building standards became mandatory in the 2010 edition of the Code.

4.5 Greenhouse Gas Emissions

Solid Waste Diversion Regulations

Assembly Bill 939: Integrated Waste Management Act of 1989

California's Integrated Waste Management Act of 1989 (AB 939, Public Resources Code Section 40050 et seq.) set a requirement for cities and counties throughout the state to divert 50 percent of all solid waste from landfills by January 1, 2000, through source reduction, recycling, and composting. In 2008, the requirements were modified to reflect a per capita requirement rather than tonnage. To help achieve this, the Act requires that each city and county prepare and submit a source reduction and recycling element. AB 939 also established the goal for all California counties to provide at least 15 years of ongoing landfill capacity.

Assembly Bill 341

AB 341 (Chapter 476, Statutes of 2011) increased the statewide goal for waste diversion to 75 percent by 2020 and requires recycling of waste from commercial and multi-family residential land uses. Section 5.408 of CALGreen also requires that at least 65 percent of the nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse.

Assembly Bill 1327

The California Solid Waste Reuse and Recycling Access Act (AB 1327, Public Resources Code Section 42900 et seq.) requires areas to be set aside for collecting and loading recyclable materials in development projects. The Act required the California Integrated Waste Management Board to develop a model ordinance for adoption by any local agency requiring adequate areas for collection and loading of recyclable materials as part of development projects. Local agencies are required to adopt the model or an ordinance of their own.

Assembly Bill 1826

In October 2014, AB 1826 was signed into law, requiring businesses to recycle their organic waste on and after April 1, 2016, depending on the amount of waste they generate per week. This law also requires that on and after January 1, 2016, local jurisdictions across the state implement an organic waste recycling program to divert organic waste generated by businesses and multi-family residential dwellings with five or more units. Organic waste means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed with food waste.

Water Efficiency Regulations

Senate Bill X7-7

The 20x2020 Water Conservation Plan was issued by the California Department of Water Resources (DWR) in 2010 pursuant to SB 7, which was adopted during the 7th Extraordinary Session of 2009–2010 and therefore dubbed "SBX7-7." SBX7-7 mandated urban water conservation and authorized DWR to prepare a plan implementing urban water conservation requirements, which DWR did through the 20x2020 Water Conservation Plan. In addition, it required agricultural water providers to prepare agricultural water management plans, measure water deliveries to customers, and implement other efficiency measures. SBX7-7 required urban water providers to adopt a water conservation target of a 20 percent reduction in urban per capita water use by 2020 compared to 2005 baseline use.

Assembly Bill 1881: Water Conservation in Landscaping Act

The Water Conservation in Landscaping Act of 2006 (AB 1881) requires local agencies to adopt the updated DWR model ordinance or an equivalent. AB 1881 also requires CEC to consult with DWR to adopt, by regulation, performance standards and labeling requirements for landscape irrigation equipment, including irrigation controllers, moisture sensors, emission devices, and valves, to reduce the wasteful, uneconomic, inefficient, or unnecessary consumption of energy or water.

Short-Lived Climate Pollutant Reduction Strategy

On September 19, 2016, SB 1383 was signed into law to supplement the GHG reduction strategies in the Scoping Plan to consider short-lived climate pollutants, including black carbon and methane. Black carbon is the light-absorbing component of fine particulate matter produced during the incomplete combustion of fuels. SB 1383 required CARB, no later than January 1, 2018, to approve and begin implementing a comprehensive strategy to reduce emissions of short-lived climate pollutants to achieve a reduction in methane by 40 percent, hydrofluorocarbon gases by 40 percent, and anthropogenic black carbon by 50 percent below 2013 levels by 2030. The bill also established targets for reducing organic waste in landfills. On March 14, 2017, CARB adopted the Short-Lived Climate Pollutant Reduction Strategy, which identifies the State's approach to reducing anthropogenic and biogenic sources of short-lived climate pollutants. Anthropogenic sources of black carbon include on- and off-road transportation, residential wood burning, fuel combustion (charbroiling), and industrial processes. According to CARB, ambient levels of black carbon in California are 90 percent lower than in the early 1960s, despite the tripling of diesel fuel use.[10] In-use on-road rules were

[10] California Air Resources Board, March 2017, Short-Lived Climate Pollutant Reduction Strategy, https://www.arb.ca.gov/cc/shortlived/shortlived.htm.

expected to reduce black carbon emissions from on-road sources by 80 percent between 2000 and 2020.

REGIONAL

Plan Bay Area: Strategy for a Sustainable Region

MTC and the Association of Bay Area Governments (ABAG) adopted Plan Bay Area 2050 on October 21, 2021.[11] Plan Bay Area 2050 provides transportation and environmental strategies to continue to meet the regional transportation-related GHG reduction goals of SB 375. An overarching goal of the regional plan is to concentrate development in areas where there are existing services and infrastructure rather than allocate new growth to outlying areas where substantial transportation investments would be necessary to achieve the per capita passenger vehicle, VMT, and associated GHG emissions reductions.

Bay Area Clean Air Plan

The Air District adopted the 2017 *Clean Air Plan, Spare the Air, Cool the Climate* (Clean Air Plan) on April 19, 2017. The 2017 Clean Air Plan also lays the groundwork for reducing GHG emissions in the Bay Area to meet the State's 2030 GHG reduction target and 2050 GHG reduction goal.

Bay Area Commuter Benefits Program

Under Air District Regulation 14, Model Source Emissions Reduction Measures, Rule 1, Bay Area Commuter Benefits Program, employers with 50 or more full-time employees within the Air District are required to register and offer commuter benefits to employees. In partnership with the Air District and MTC, the Rule's purpose is to improve air quality, reduce GHG emissions, and decrease the Bay Area's traffic congestion by encouraging employees to use alternative commute modes, such as transit, vanpool, carpool, bicycling, and walking. The benefits program allows employees to choose from one of four commuter benefit options, including a pre-tax benefit, employer-provided subsidy, employer-provided transit, and alternative commute benefit.

LOCAL

Valley Transportation Authority 2021 Congestion Management Program Document

The Valley Transportation Authority (VTA) Congestion Management Program (CMP) aims to adopt transportation improvement programs for Santa Clara County.[12] The CMP provides a roadmap to reduce congestion, land use decision-making and air quality programs among local

[11] Association of Bay Area Governments and the Metropolitan Transportation Commission, October 2021, Plan Bay Area 2050. https://abag.ca.gov/sites/default/files/documents/2021-11/Plan_Bay_Area_2050_October_2021.pdf, accessed May 20, 2024.
[12] Valley Transportation Authority, December 2021, 2021 Congestion Management Program Document, https://www.vta.org/sites/default/files/2022-01/2021CMPDocumentV2_Reduced.pdf

jurisdictions. The 2021 update also documents changes to VTA's Transportation Demand Program (TDM), regional planning efforts by ABAG and MTC, and future updates to the Multimodal Improvement Plan. Develop a list of projects intended to maintain or improve the level of service on the designated system and to maintain transit performance standards.

Mountain View Code of Ordinances

The Mountain View Code of Ordinances includes various directives to minimize adverse impacts to greenhouse gas emissions in the City of Mountain View. The following Ordinances would apply to the proposed project that would reduce GHG emission impacts:

- Section 8.20.12, *Subsection 101.10.1.2.2 added*, adopts the green building standards for nonresidential new construction. All nonresidential new construction must comply with the following:
  - The mandatory measures of the 2022 California Green Building Standards Code and any Mountain View amendments;
  - Shall meet the intent of LEED ® Gold certified;
  - Shall meet the parking requirements per Table 101.10 and Table A5.106.5.3.2;
  - Shall demonstrate energy compliance to meet or exceed Title 24, Part 6.
- Section 8.20.14, *Table 101.10 added*, adopts the following applicable California Green Building Standards Code.
- Section 8.20.42, *Subsection 5.106.5.3.2 amended* and *Table 5.106.5.3.2 added*, adopts and amends the following applicable Tier 2 CALGreen electric vehicle (EV) parking standards.

Mountain View Municipal Operations Climate Action Plan

The City adopted its Municipal Operations Climate Action Plan (MOCAP) in 2015 to address climate action planning for government operations in the city. The Plan defines actions that the City can implement to reduce greenhouse gas emissions resulting from municipal operations (e.g., government buildings, facilities, and vehicle fleet). In addition to the emission reduction benefits, implementation of the Plan intends to lower energy, water, and fuel costs; reduce exposure to future energy cost increases; and improve government service delivery. The MOCAP was prepared in accordance with the State's Local Government Operation Protocol which provides guidance on how to inventory greenhouse gas emissions resulting from government buildings and facilities, government fleet vehicles, wastewater treatment and potable water treatment facilities, landfill facilities, and other operations and services[13]

[13] City of Mountain View, May 2015, Municipal Operations Climate Action Plan, https://www.mountainview.gov/home/showpublisheddocument/816/637940976800700000

4.5 Greenhouse Gas Emissions

4.5.2 Existing Conditions

In 2022, the statewide GHG emissions inventory was updated for 2000 to 2020 emissions using the GWPs in IPCC's AR4, and California produced 369.2 $MMTCO_2e$ GHG emissions,[14] 35.3 $MMTCO_2e$ lower than 2019 levels and 61.8 $MMTCO_2e$ below the 2020 GHG limit of 431 $MMTCO_2e$. The 2019 to 2020 decrease in emissions is likely due in large part to the impacts of the COVID-19 pandemic. Since the peak level in 2004, California's GHG emissions have generally followed a decreasing trend. In 2014, statewide GHG emissions dropped below the 2020 GHG limit and have remained below the limit since that time. Per capita GHG emissions in California have dropped from a 2001 peak of 13.8 metric tons per person to 9.3 metric tons per person in 2020, a 33-percent decrease.[15]

California's transportation sector remains the largest generator of GHG emissions, producing 37 percent of the state's total emissions in 2020. Industrial sector emissions made up 20 percent and electric power generation made up 16 percent of the state's emissions inventory. Other major sectors of GHG emissions include commercial and residential (4 percent), agriculture and forestry (8.6 percent), high-GWP gases (5.8 percent), and recycling and waste (2 percent).[16]

Transportation emissions continued to decline for the past three consecutive years with the rise of fuel efficiency in the passenger vehicle fleet and increase in battery electric vehicles. The deployment of renewable and/or less-carbon-intensive resources and higher energy efficiency standards have facilitated the continuing decline in fossil fuel electricity generation. The industrial sector trend has been flatter in recent years but saw a decrease of 7.1 $MMTCO_2e$ in 2020. Commercial and residential emissions saw a decrease of 1.7 $MMTCO_2e$. Emissions from high-GWP gases have continued to increase as they replace ozone-depleting substances that are being phased out under the 1987 Montreal Protocol. Emissions from other sectors have remained mostly constant in recent years. Overall trends in the inventory also continue to demonstrate that the carbon intensity of California's economy (the amount of carbon pollution per million dollars of gross domestic product) is declining. From 2000 to 2020, the carbon intensity of California's economy decreased by 49 percent while the gross domestic product increased by 56 percent.[17]

[14] California Air Resources Board, October 26, 2022, California Greenhouse Gas 2000-2020 Trends of Emissions and Other Indicators Report. https://ww2.arb.ca.gov/sites/default/files/classic/cc/inventory/2000-2020_ghg_inventory_trends.pdf.

[17] California Air Resources Board, October 26, 2022, California Greenhouse Gas 2000-2020 Trends of Emissions and Other Indicators Report. https://ww2.arb.ca.gov/sites/default/files/classic/cc/inventory/2000-2020_ghg_inventory_trends.pdf.

4.5.3 Significance Criteria

Appendix G, *Environmental Checklist Form*, of the California Environmental Quality Act (CEQA) Guidelines states that the proposed project would result in a significant GHG emissions impact if it would:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

4.5.4 Project Impact Analysis

The following impact analysis addresses thresholds of significance for which the Initial Study disclosed potentially significant impacts.

a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

A project does not generate enough GHG emissions on its own to influence global climate change; therefore, this section measures the project's contribution to the cumulative environmental impact associated with GHG emissions.

Development of the proposed project would contribute to climate change through direct and indirect emissions of GHG from the construction activities needed to implement the project, which would generate a short-term increase in GHG emissions, as well as a long-term increase in GHG emissions from on-road mobile sources, energy use, area sources, water use/wastewater generation, and solid waste disposal. As identified in the Air District's 2022 CEQA Air Quality Guidelines, short-term construction activities are one-time emissions that would not substantially contribute to GHG emissions impacts. While the Air District does not have an adopted significance threshold for construction emissions, the Air District recommends that construction GHG emissions are quantified and disclosed. As such, Table 4.5-1, *Construction-Related GHG Emissions*, provides the construction-related GHG emissions associated with implementation of the proposed project.

4.5 Greenhouse Gas Emissions

Table 4.5-1 Construction-Related GHG Emissions

Construction Year	MT CO_2e
1	343
2	444
3	385

Source: California Emissions Estimator Model, Version 2022.1
Notes: MT CO_2e = Metric Ton (MT) of Carbon Dioxide equivalent (CO_2e)

For operational phase, the Air District identifies in its 2022 CEQA Air Quality Guidelines that projects that implement the BMPs shown in Table 4.5-2, C*onsistency Analysis with the Air District's GHG Best Management Practices*, would contribute their fair share of what will be required to achieve the State's long-term climate goals. As shown in Table 4.5-2, the proposed project would be consistent with the Air District's GHG BMPs; therefore, impacts to the environment would be **less than significant**.

Table 4.5-2 Consistency Analysis with the Air District's GHG Best Management Practices

Sector	Consistency Analysis
Buildings	
a. The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).	**Consistent.** As described in Chapter 3, *Project Description*, the proposed project will be constructed as all-electric buildings with no natural gas appliances or plumbing. As such, the proposed project would be consistent with this BMP.
b. The project will not result in any wasteful, inefficient, or unnecessary electrical usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines.	**Consistent.** The proposed buildings would be built to comply with the most current CALGreen Building Code requirements and building efficiency standards to reduce unnecessary energy consumption. Moreover, as determined in Section 3.6, *Energy*, in the Initial Study (see Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments*), the proposed project was determined to not result in wasteful, inefficient, or unnecessary consumption of energy resources.
Transportation	
a. Achieve compliance with electric vehicle requirements in the most recently adopted version of CALGreen Tier 2.	**Consistent.** In compliance with the City's adoption of the CALGreen standards, the proposed project would implement the applicable CALGreen electric vehicle parking stall standards, thereby increasing access to alternative refueling infrastructure. Also, as described in Chapter 3, *Project Description*, the proposed project will include CALGreen Tier 2 parking standards. As such, the proposed project would be consistent with this BMP.
b. Achieve a reduction in project-generated vehicle miles traveled (VMT) below the regional average consistent with the current version of	**Consistent**. As described in Section 4.8, *Transportation*, the increase in staff is not substantial and represents an approximately 8-percent increase from existing conditions. Therefore, implementation of the proposed project would generate a nominal increase in vehicle trips.

Table 4.5-2 Consistency Analysis with the Air District's GHG Best Management Practices

the California Climate Change Scoping Plan or meet a locally adopted Senate Bill 743 VMT target, reflecting the recommendations provided in the Governor's Office of Planning and Research's Technical Advisory on Evaluating Transportation Impacts in CEQA: • Residential projects: 15 percent below the existing VMT per capita. • Office projects: 15 percent below the existing VMT per employee. • Retail projects: no net increase in existing VMT.	However, because, even at maximum capacity, the new employees at the project site would be relocated from existing office space elsewhere in the city, the increase in trips would not represent net new trips for the city as a whole. The proposed project's VMT impacts are determined to be less than significant. Because the SB 743 VMT reduction targets are designed to produce reductions in transportation-related GHG emissions, the proposed project is considered consistent with this BMP.

Source: Bay Area Air District, April 2023, California Environmental Quality Act Air Quality Guidelines. https://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/updated-ceqa-guidelines.

Significance without Mitigation: Less than significant.

b) Would the project conflict with an applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?

Applicable plans adopted for the purpose of reducing GHG emissions include CARB's Scoping Plan, ABAG's/MTC's *Plan Bay Area 2050,* and the City's MOCAP. A consistency analysis with these plans is presented below.

CARB Scoping Plan

The CARB Scoping Plan is applicable to State agencies but is not directly applicable to cities, counties, and individual projects (i.e., the Scoping Plan does not require local jurisdictions to adopt its policies, programs, or regulations to reduce GHG emissions). However, new regulations adopted by the State agencies from the Scoping Plan result in GHG emissions reductions at the local level. Local jurisdictions benefit from reductions in transportation emissions rates, increases in water efficiency in the building and landscape codes, and other statewide actions that affect a local jurisdiction's emissions inventory from the top down. Statewide strategies to reduce GHG emissions include the LCFS and changes in the CAFE standards. Additionally, local jurisdictions are encouraged to prepare local GHG reduction plans to align local GHG reductions with the State GHG reduction targets identified in the Scoping Plan.

Statewide strategies to reduce GHG emissions in the 2022 Climate Change Scoping Plan include: implementing SB 100, which expands the RPS to 60 percent by 2030; expanding the Low Carbon

4.5 Greenhouse Gas Emissions

Fuel Standards (LCFS) to 18 percent by 2030; implementing the Mobile Source Strategy to deploy zero-electric vehicle buses and trucks; implementing the Sustainable Freight Action Plan; implementing the Short-Lived Climate Pollutant Reduction Strategy, which reduces methane and hydrofluorocarbons to 40 percent below 2013 levels by 2030 and black carbon emissions to 50 percent below 2013 levels by 2030; continuing to implement SB 375; creating a post-2020 Cap-and-Trade Program; and developing an Integrated Natural and Working Lands Action Plan to secure California's land base as a net carbon sink.

Statewide strategies to reduce GHG emissions include the low carbon fuel standards, California Appliance Energy Efficiency regulations, California Renewable Energy Portfolio standard, changes in the CAFE standards, and other early action measures as necessary to ensure the State is on target to achieve the GHG emissions reduction goals of AB 32, SB 32, and AB 1279. In addition, new developments are required to comply with the most current Building Energy Efficiency Standards and CALGreen. The proposed project's GHG emissions would be reduced from compliance with statewide measures that have been adopted since AB 32, SB 32, and AB 1279 were adopted. Therefore, this impact would be **less than significant**.

ABAG/MTC's Plan Bay Area

Plan Bay Area 2050 is the Bay Area's regional transportation plan to achieve the passenger vehicle emissions reductions identified under SB 375. Plan Bay Area 2050 is the current SCS for the Bay Area, adopted October 21, 2021. In addition to significant transit and roadway performance investments to encourage focused growth, Plan Bay Area 2050 directs funding to neighborhood active transportation and complete streets projects, climate initiatives, lifeline transportation and access initiatives, safety programs, and PDA planning.[18]

While Plan Bay Area 2050 does not override local land use control, it provides guidance to the local jurisdictions such as Santa Clara County on how future development can be consistent with the State's GHG and VMT reduction goals. This includes constructing more infill development in downtowns and centers in close proximity to jobs and services.

Plan Bay Area 2050 is the Bay Area's Regional Transportation Plan/Sustainable Community Strategy that identifies the sustainable vision for the Bay Area.[19] The proposed project would result in the redevelopment of the project site where there is already access to existing infrastructure and services. Therefore, the proposed project would not conflict with the land use concept plan in Plan Bay Area 2050 and impacts would be **less than significant**.

[18] Association of Bay Area Governments and the Metropolitan Transportation Commission, October 2021, Plan Bay Area 2050, https://www.planbayarea.org/sites/default/files/documents/Plan_Bay_Area_2050_October_2021.pdf, accessed October 24, 2022.
[19] Association of Bay Area Governments and the Metropolitan Transportation Commission, October 2021, Plan Bay Area 2050, https://www.planbayarea.org/sites/default/files/documents/Plan_Bay_Area_2050_October_2021.pdf, accessed October 24, 2022.

Municipal Operations Climate Action Plan

The City of Mountain View adopted its MOCAP in 2015 in order to present and evaluate mechanisms by which the City may achieve an emissions reduction target of 80 percent below 2005 levels by 2050. The MOCAP includes strategies that the City can implement to reduce emissions associated with its government operations. The proposed project is a new Public Safety Building that would replace the existing Mountain View Police Services - Fire Administration building. Because the proposed project would serve as a government building, an analysis for its consistency with the MOCAP strategies is presented in Table 4.5-3, *Consistency Analysis with the Municipal Operations Climate Action Plan*.

Table 4.5-3 Consistency Analysis with the Municipal Operations Climate Action Plan

Sector	Consistency Analysis
Facilities	
Strategy F-1: Low-Carbon Grid Electricity Procure Low-Carbon Grid Electricity through Utility Programs or Large-Scale Renewable Energy Development.	**Consistent.** While the proposed project is not directly applicable to the development/procurement of low-carbon electricity options, it would support this strategy by constructing all-electric buildings that comply with Building Energy Efficiency Standards, CALGreen, the Mountain View Code of Ordinances and the requirements for LEED Gold Certification. These project features associated with compliance with these codes would reduce electricity usage from the project as the City continues to seek low-carbon energy options with Silicon Valley Clean Energy, which would supply electricity to the proposed project.
Strategy F-2: Renewable/Low-Carbon Electricity Generation Develop Additional Renewable Energy Facilities	**Consistent.** Compliance with the Mountain View Code of Ordinances requires new non-residential construction to include rooftop PV installation to accommodate the load from all-electric buildings, consistent with this strategy's Action B to include PV installations at city buildings. The Ordinance Code also requires water heating systems to be all-electric or solar which would support Action B of this strategy, as applicable.
Strategy F-3: Existing Building Energy Retrofit and Management Reduce Energy Consumption in Existing Municipal Buildings through Energy Efficiency Improvements, Interactive Management Systems, Employee Education, and Building Operation and Maintenance Policies.	**Consistent.** The proposed project would not be involved with the actions that implement this strategy included the development of an energy efficiency fund, strengthening the City's energy efficiency procurement policy, and retro-commissioning program, but would generally support this strategy by implementing the energy reduction requirements in the City's Code of Ordinances and the applicable California Building Codes.
Strategy F-4: New Building Energy Performance Establish Energy Efficiency Targets for New Municipal Buildings.	**Consistent.** As discussed previously, the proposed project would be required to achieve LEED Gold Certification for the project buildings, thereby directly supporting this strategy.
Strategy F-5: Public Realm Lighting Efficiency Upgrade Public Realm Lighting to	**Consistent.** The proposed project would be required to comply with the California Energy Code which contains standards for high-efficacy lighting fixtures and lighting controls for non-residential buildings. The proposed

4.5 Greenhouse Gas Emissions

Table 4.5-3 Consistency Analysis with the Municipal Operations Climate Action Plan

More Efficient Technology.	project would therefore support the intent of this strategy by implementing energy efficient lighting.
Strategy F-6: Landscape Water Conservation Formalize Existing Landscape Conservation Practices into a Green Grounds Policy.	**Consistent.** This strategy refers to an effort to formally adopt a Greens Ground Policy by the City to better regulate the implementation of water conserving strategies. The proposed project would comply with the City's adopted water conservation policies including the water conservation landscaping regulations contained in Division 3, Article XI, in the City Zoning Code.
Vehicle Fleet	
Strategy VF-1: Efficient Vehicles Transition City Fleet to More Efficient Vehicles and Provide Operational Improvement Guidance	**Consistent.** The proposed project would not be directly involved with efforts to procure fuel efficient vehicles but would comply with and benefit from State and City policies that aim to increase fuel efficiency for vehicles.
Strategy VF-2: Alternative Fuel Vehicles Increase Use of Alternative Fueled Vehicles and Refueling Infrastructure.	**Consistent.** In compliance with the City's adoption of the CALGreen standards, the proposed project would implement the applicable CALGreen electric vehicle parking stall standards. Also, as described in Chapter 3, *Project Description*, the proposed project will include CALGreen Tier 2 parking standards; thereby, increasing access to alternative refueling infrastructure.
Strategy VF-3: Behavior/Fuel Optimization Encourage and Promote Fuel-Efficient Driving.	**Consistent.** As described in Section 4.8, *Transportation*, the increase in staff is not substantial and represents an approximately 8-percent increase from existing conditions. Therefore, implementation of the proposed project would generate a nominal increase in vehicle trips. However, because, even at maximum capacity, the new employees at the project site would be relocated from existing office space elsewhere in the city, the increase in trips would not represent net new trips for the city as a whole. This nominal increase in daily vehicle trips would not have a significant impact on VMT nor conflict with this strategy to reduce employee VMT.
Solid Waste	
Strategy SW-1: Waste Reduction Reduce Municipal Waste through Procurement Policies, Waste Diversion Goals, and Waste Stream Monitoring and Analysis.	**Consistent.** The proposed project would comply with the relevant requirements in the City's Energy Efficient Procurement Policy. It would also comply with the City's waste diversion programs and municipal code requirements per Chapter 16, *Garbage, Rubbish and Weeds*, of the Code of Ordinances.
Strategy SW-2: Recyclable Paper Reduction Reduce Paper Use in Municipal Operations.	**Consistent.** This strategy references the implementation of a paperless office policy for the City. Operation of the Public Safety Building would comply with this strategy to the extent possible.
Strategy SW-3: Landscape Waste Diversion Expand City Efforts in Landscape Waste Composting.	**Consistent.** The proposed project would comply with the provisions of SB 1383, the Short-Lived Climate Pollutant Reduction Act, as codified in the City Code of Ordinances in Article VI, Chapter 16. This includes requirements for composting at non-residential uses.

Table 4.5-3 Consistency Analysis with the Municipal Operations Climate Action Plan

Strategy SW-4: Construction and Demolition Waste Diversion Increase Construction and Demolition Waste Diversion Rates for Municipal Projects.	**Consistent.** Section 5.408 of CALGreen requires that at least 65 percent of the nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse. This exceeds the City's 50 percent diversion noted in the MOCAP and the proposed project would comply with all applicable CALGreen standards.

Source: City of Mountain View, May 2015, Municipal Operations Climate Action Plan, https://www.mountainview.gov/home/showpublisheddocument/816/637940976800700000

Significance without Mitigation: Less than significant.

4.5.5 Cumulative Impact Analysis

Project-related GHG emissions are not confined to a particular air basin but are dispersed worldwide. Therefore, impacts under impact discussions (a) and (b) are not project-specific impacts to global warming, but the proposed project's contribution to this cumulative impact.

While the proposed project would contribute to short-term and long-term increases in GHG emissions, it would implement the BMPs established by the Air District for the purpose of achieving the State's climate goals. Compliance with these BMPs would reduce GHG impacts to a less-than-significant level for the proposed project. The proposed project is also consistent with other applicable state and local plans including the CABR 2022 Scoping Plan, Plan Bay Area 2050, and the City's MOCAP, as discussed in impact discussion (b). Therefore, cumulative GHG impacts of the proposed project would be **less than significant**.

4.5 Greenhouse Gas Emissions

This page is intentionally left blank.

4.6 HAZARDS AND HAZARDOUS MATERIALS

This section of the Draft Environmental Impact Report (EIR) evaluates the potential for implementation of the proposed project to result in a significant hazards and hazardous materials impact. The analysis in this section is based in part on the following technical report:

> *Phase I Environmental Site Assessment, Mountain View Public Safety Building Project for SVA Architects*, PlaceWorks, June 2024

Complete copies of these studies are included in Appendix D, *Phase I Environmental Site Assessment*, of this Draft EIR.

As described in Chapter 2, *Introduction*, of this Draft EIR, the only significance criterion identified in the California Environmental Quality Act (CEQA) Guidelines that is evaluated in this chapter includes impacts associated with the reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Therefore, this chapter only addresses this one issue.

4.6.1 Regulatory Background

Federal, State, and local laws, regulations, plans, or guidelines related to hazards and hazardous materials and potentially applicable to the proposed project are summarized below.

FEDERAL

United States Environmental Protection Agency

The United States Environmental Protection Agency (EPA) is the primary federal agency that regulates hazardous materials and waste. In general, the EPA works to develop and enforce regulations that implement environmental laws enacted by Congress. The agency is responsible for researching and setting national standards for a variety of environmental programs, delegating the responsibility for issuing permits, and monitoring and enforcing compliance to states and Native American tribes. EPA programs promote handling hazardous waste safely, cleaning up contaminated land, and reducing waste volumes through such strategies as recycling. California falls under the jurisdiction of EPA Region 9. Under the authority of the Resource Conservation and Recovery Act (RCRA) and in cooperation with State and tribal partners, the EPA Region 9 Waste Management and Superfund Divisions manage programs for site environmental assessment and cleanup, hazardous and solid waste management, and underground storage tanks.

4.6 Hazards and Hazardous Materials

Comprehensive Environmental Response, Compensation, and Liability Act

The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 protects water, air, and soil resources from the risks created by past chemical disposal practices. This law is also called the Superfund Act and regulates sites on the National Priority List, which are called Superfund sites. The act was intended to encompass the prevention of and response to uncontrolled hazardous substances releases. It provides mechanisms for reacting to emergencies and chronic hazardous material releases. In addition to procedures to prevent and remedy problems, it established a system for compensating appropriate individuals and assigning appropriate liability. It is designed to plan for and respond to failure in other regulatory programs and remedy problems resulting from action taken before the era of comprehensive regulatory protection.

STATE

California Unified Program Administration

In 1993, Senate Bill 1082 gave the California Environmental Protection Agency (CalEPA) the authority and responsibility to establish a unified hazardous waste and hazardous materials management and regulatory program, commonly referred to as the Unified Program. The Unified Program consolidates, coordinates, and makes consistent the administrative requirements, permits, inspections, and enforcement activities of environmental and emergency response programs. The Unified Program Administration and Advisory Group (UPAAG) was created to foster effective working partnerships between local, State and federal agencies. The UPAAG's goals and objectives are listed in the UPAAG Strategic Plan. The six programs are:

- Hazardous Materials Release Response Plans and Inventories (Business Plans)
- California Accidental Release Prevention Program
- Underground Storage Tank Program
- Aboveground Petroleum Storage Act Program
- Hazardous Waste Generator and Onsite Hazardous Waste Treatment (tiered permitting) Programs
- California Uniform Fire Code: Hazardous Material Management Plans and Hazardous Material Inventory Statements

The State agency partners involved in the Unified Program have the responsibility of setting program element standards, working with CalEPA on ensuring program consistency, and providing technical assistance to the certified unified program agencies. The following State agencies are involved with the Unified Program:

- **California Environmental Protection Agency.** The Secretary of the CalEPA is directly responsible for coordinating the administration of the Unified Program. The Secretary

certifies Certified Unified Program Agencies (CUPA). The Secretary has certified 83 CUPAs to date, which carry out the responsibilities previously handled by approximately 1,300 State and local agencies.

- **Department of Toxic Substances Control**. The Department of Toxic Substances Control (DTSC) provides technical assistance and evaluation for the hazardous waste generator program, including on-site treatment (tiered permitting).
- **Governor's Office of Emergency Services.** The Governor's Office of Emergency Services is responsible for providing technical assistance and evaluation of the Business Plan Program and the California Accidental Release Response Plan (CalARP) Programs.
- **Office of the State Fire Marshal.** The Office of the State Fire Marshal is responsible for ensuring the implementation of the Hazardous Material Management Plans and the Hazardous Material Inventory Statement Programs. These programs tie in closely with the Business Plan Program.
- **State Water Resources Control Board.** The State Water Resources Control Board provides technical assistance and evaluation for the underground storage tank program in addition to handling the oversight and enforcement for the aboveground storage tank program.

Under Division 4.5 of Title 22 of the California Code of Regulations (CCR) and the California Hazardous Waste Control Law (Health and Safety Code Division 20, Chapter 6.5), DTSC regulates the generation, transportation, treatment, storage, and disposal of hazardous waste. Both RCRA and the Hazardous Waste Control Law impose "cradle to grave" regulatory systems for handling hazardous waste in a manner that protects human health and the environment.

California Health and Safety Code and Code of Regulations

California Health and Safety Code Chapter 6.95 and 19 CCR Section 2729 set out the minimum requirements for business emergency plans and chemical inventory reporting. A business that uses hazardous materials or a mixture containing hazardous materials must establish and implement a business plan if the hazardous material is handled in certain quantities. These regulations require businesses to provide emergency response plans and procedures, training program information, and a hazardous material chemical inventory disclosing hazardous materials stored, used, or handled on-site.

California Health and Safety Code Section 25250.256 requires that every generator of used oil, other than the owner or operator of a used oil collection center, as defined in Section 48622 of the Public Resources Code (PRC), or a household hazardous waste collection facility, as defined in Health and Safety Code Section 25218.1, that transfers used oil to a recycling facility, shall submit a certification to the transporter that the used oil transferred meets the definition of used oil pursuant to Section 25250.1(a) of the Health and Safety Code. The certification shall

4.6 Hazards and Hazardous Materials

specifically state that the used oil does not contain polychlorinated biphenyls (PCBs) at a concentration of 5 parts per million (ppm), or greater, in accordance Health and Safety Code Section 25250.1(iv)(B)(1)(a).

California Code of Regulations, Title 22, Division 4.5

22 CCR Division 4.5 sets forth the requirements for hazardous waste generators; transporters; and owners or operators of treatment, storage, or disposal facilities. These regulations include the requirements for packaging, storage, labeling, reporting, and general management of hazardous waste prior to shipment. In addition, the regulations identify standards applicable to transporters of hazardous waste. These regulations specify the requirements for transporting loads of hazardous waste, including manifesting, vehicle registration, and accidental emergency discharges during transportation.

Hazardous Materials Disclosure Programs

The Unified Program administered by the State of California consolidates, coordinates, and makes consistent the administrative requirements, permits, inspections, and enforcement activities for environmental and emergency management programs, which include Business Plans, the California Accidental Release Prevention Program, and the Underground Storage Tank (UST) Program. The Unified Program is implemented by CUPAs at the local government level.

The County of Santa Clara has four Certified United Program Agencies that administer hazardous materials, hazardous waste, and underground storage tank programs within their jurisdictions—Hazardous Materials Compliance Division of the Santa Clara County Department of Environmental Health (SCCEH) (for all areas of Santa Clara County other than the cities of Santa Clara, Gilroy, and Sunnyvale); Santa Clara City Fire Department; Gilroy Building, Life, and Environmental Safety to Community Development Department, Fire Prevention Division; and the Sunnyvale Department of Public Safety. Under the Unified Program, the four CUPAs consolidate, coordinate, and make consistent the administrative requirements, permits, inspection, and enforcement activities associated with several regulatory programs.[1]

Under an agreement with the County, the Mountain View Fire Department implements hazardous materials programs as a participating agency under the Unified Program.[2]

[1] Santa Clara County, Santa Clara County Multi-Jurisdictional Local Hazard Mitigation Plan, https://files.santaclaracounty.gov/exjcpb1566/2024-10/final-vol-i-santa-clara-county-mjhmp_7-26-2024.pdf ?VersionId=sJ_YNu0VIsDHH5dMOSdiwVAgC7Gl2P.Z.
[2] City of Mountain View, 2022, City of Mountain View Housing Element Update Draft Environmental Impact Report, page 4.8-15.

California Fire Code

The California Fire Code is contained in 24 CCR Part 9. The Code is updated every three years and includes provisions and standards for hazardous materials.

LOCAL

Mountain View 2030 General Plan

The Public Safety Element of the Mountain View 2030 General Plan provides information about risks in Mountain View from hazards and contains goals and policies designed to protect the community and its property from hazardous materials. The Mountain View 2030 General Plan policies relevant to the proposed project are listed in Table 4.6-1, *Mountain View 2030 General Plan Policies Relevant to Hazardous Materials and the Proposed Project*.

Table 4.6-1 Mountain View 2030 General Plan Policies Relevant to Hazardous Materials and the Proposed Project

Policy Number	Policy Text
Chapter 8, Public Safety (PSA) Element	
Policy PSA 3.2	*Protection from hazardous materials.* Prevent injuries and environmental contamination due to the uncontrolled release of hazardous materials through prevention and enforcement of fire and life safety codes.
Policy PSA 3.3	*Development review.* Carry out development review procedures that encourage effective identification and remediation of contamination and protection of public and environmental health and safety.
Policy PSA 3.4	*Oversight agencies.* Work with local, state and federal oversight agencies to encourage remediation of contamination and protection of public and environmental health and safety.

Source: City of Mountain View, 2012, *2030 General Plan.*

Mountain View Municipal Code

The City of Mountain View Municipal Code contains all ordinances for the city. The Municipal Code is organized by Chapter, Article, Division, and Section.

Chapter 24, *Hazardous Materials*, regulates hazardous materials and other regulated materials.

Division II, Materials Regulated, regulates materials that, because of their quantity, concentration, or physical or chemical characteristics, pose a significant hazard if released into the workplace or the environment. Section 24.2.1, Exclusions, establishes minimum quantity exclusions for materials. Division VII, Applications and Permits, outlines provisions related to the permitting of the storage, use, and handling of hazardous materials in excess of the exempt amounts.

4.6 Hazards and Hazardous Materials

4.6.2 Existing Conditions

SITE HISTORY

Based on the review of historical and maps, the project site has been developed since at least 1897. No previous agricultural fields or farming activities were noted on the project other than historical packaging and warehousing facilities for agricultural products. Based on a search of the Santa Clara County Recorder's Office, the California Environmental Protection Agency, and the United States Environmental Protection Agency, there were no environmental liens or activity and use limitations identified for the project site. The project site has not been used as a site for mining operations, drug manufacturing, or any other potentially hazardous historical uses.[3]

Historical surrounding land uses include residential and light industrial uses (warehouses for the storage of agricultural products) starting around 1897.[4]

RECORDS REVIEW

The objective of the Phase I Environmental Site Assessment (ESA) prepared for the proposed project is to assess whether "recognized environmental conditions" (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the project site.

No RECs were identified related to activities on the project site. However, an REC was identified associated with former dry cleaners on adjacent properties; potential migration of soil vapors and/or groundwater from these properties creates a vapor encroachment condition (VEC) on the project site.[5] The Phase I ESA identified these sites as having potential tetrachloroethylene (also known as perchloroethylene or PCE) plumes within 100 feet of the project site and are listed below:[6]

- **Former Fremont Laundry (990 Villa Street).** This site is approximately 95 feet southeast of the project site and is identified on the DTSC's voluntary cleanup site (VCP) list and Site Mitigation and Brownfields Reuse Program (SMBRP) list. The facility has a land use covenant and has been certified by DTSC as having completed all response actions. However, ongoing maintenance and operation activities associated with the active subslab depressurization system occur on the site. The dry cleaner has not operated at the site since 1985, and the property is now developed as a two-story commercial building. However, because this

[3] PlaceWorks, 2024, *Phase I Environmental Site Assessment, Mountain View Public Safety Building Project for SVA Architects*, page 18.
[4] PlaceWorks, 2024, *Phase I Environmental Site Assessment, Mountain View Public Safety Building Project for SVA Architects*, page 19.
[5] PlaceWorks, 2024, *Phase I Environmental Site Assessment, Mountain View Public Safety Building Project for SVA Architects*, pages 1 to 2.
[6] PlaceWorks, 2024, *Phase I Environmental Site Assessment, Mountain View Public Safety Building Project for SVA Architects*, pages 26, 30, 36, and 37.

facility is upgradient from the project site, it is considered to be an REC due to the possibility of vapor migration onto the project site. This is a potential vapor encroachment issue is considered to be an REC.

- **Former Evelyn Avenue Parking Lot (southeast corner of Evelyn Avenue and Franklin Street).** This site is approximately 150 feet east-southeast of the project site and is identified on DTSC's VCP list. The site previously contained a parking lot and is now developed with a multi-family building. Although the facility received a "no further action" determination in 2009 by DTSC, because the property is upgradient from the project site and there is contamination of groundwater beneath the property with potential vapor migration onto the project site, this is considered to be an REC.

Although these off-site facilities have been investigated and remediated, the off-site extent of the soil vapor and/or groundwater plumes westward toward the project site has not been investigated, and subsequent investigation of the adjacent property to the east showed migration of soil vapors onto that property. Therefore, the Phase I ESA recommends further analysis (through a Phase II ESA) to determine if the project site has been impacted by vapor concentrations and/or groundwater concentrations in excess of commercia land use screening levels. More information regarding these sites and other results of the records search are available in the Phase I ESA (see Appendix D, *Phase I Environmental Site Assessment*, of this Draft EIR).

The Phase I ESA does not identify any HRECs or CRECs in connection with the project site.

4.6.3 Significance Criteria

The Initial Study prepared for this Draft EIR (see Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments*) identified that the proposed project would not result in a significant impact for the following significance criteria:

- Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?
- Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?
- Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

4.6 Hazards and Hazardous Materials

- Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?
- Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

The proposed project would have a significant impact under Appendix G, *Environmental Checklist Form*, of the California Environmental Quality Act (CEQA) Guidelines if it would:

a) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.

4.6.4 Project Impact Analysis

The following impact analysis addresses thresholds of significance for which the Initial Study disclosed potentially significant impacts.

a) Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Hazardous materials during construction could potentially include fuels, lubricants, greases, and coatings. After construction, the use of hazardous materials could contain cleaning solvents, fertilizers, pesticides, and other materials used in the regular maintenance and operation of the proposed uses. An accidental release of any of these materials could pose a health hazard to the public. Existing laws, regulations, policies, and procedures that would serve to prevent the release of hazardous materials include applicable federal, State, and local laws and regulations described in Section 4.6.1, *Regulatory Background*, of this section. Compliance with these existing laws, regulations, policies, and procedures would help to ensure that future development activities would not create a significant hazard to the public.

The project site may be impacted by soil vapors and/or groundwater due to the migration of dry cleaning chemicals (primarily PCE) from nearby properties to the east that formerly contained dry cleaning operations.

According to the Phase I ESA prepared for the proposed project, the former Fremont Laundry site at 990 Villa Street has had measured indoor air concentrations in excess of DTSC commercial/industrial carcinogenic screening levels, groundwater concentrations above maximum contaminant levels (MCLs), and maximum concentrations in soil vapor of 200,000 micrograms per cubic meter (ug/m^3). The 990 Villa Street site has a land use restriction and is being regulated by DTSC, with ongoing maintenance and operation of an active sub-slab

depressurization system. Annual reports indicate that the sub-slab depressurization system is working in accordance with permit requirements. However, it is not known if soil vapors migrated onto the project site prior to the installation of the sub-slab depressurization system, and no known off-site investigation of soil vapors or groundwater concentrations to the west (i.e., in the direction of the project site) has been conducted. Soil vapor concentrations along the western edge of the property, within 100 feet of the project site, had PCE concentrations of 12,000 ug/m^3.

In addition, the Evelyn Avenue parking lot site has had measured PCE groundwater concentrations up to 230 micrograms per liter (ug/l) and soil vapor concentrations up to 13,000 ug/m^3 at locations along the western portion of the site. The site previously contained a parking lot and is now developed with a multi-family building. DTSC issued a no further action letter in 2009 based on the enhanced ventilation of the below-grade garage. However, no off-site investigation was conducted at this property, and it is unknown whether soil vapors and/or groundwater may have migrated to the west (i.e., toward or onto the project site).

The proposed project involves on-site construction activities that could expose workers to subsurface hazards. In addition, the proposed project involves an increase in the occupancy of the project site (due to the proposed increase in on-site employment), which would expose additional people to potential hazards when compared to existing conditions. Therefore, without further investigation, the proposed project has the potential to exacerbate existing hazards associated with these off-site hazardous materials sites. Therefore, the impact would be *significant*.

Impact HAZ-1: The construction activities and increased site occupancy involved in the proposed project could exacerbate an existing hazard associated with the release of hazardous materials originating from off-site land uses.

> **Mitigation Measure HAZ-1:** Prior to issuance of demolition or grading permits, shallow soil samples and groundwater samples shall be taken in the near surface soil and tested for tetrachloroethylene to determine if contaminants from previous operations on the former Fremont Laundry or Evelyn Avenue parking lot sites are present at concentrations above established regulatory construction worker safety and commercial environmental screening levels. The results of the soil sampling and testing must be provided to the City of Mountain View Community Development Department.
>
> If contaminated soils or groundwater are found in concentrations above the appropriate regulatory environmental screening levels for the proposed project, the project sponsor shall obtain regulatory oversight from the Santa Clara County Department of Environmental Health, Department of Toxic Substances Control, or Regional Water Quality Control Board to mitigate the contamination found. A Site Management Plan (SMP), Removal Action Plan (RAP), or equivalent document must be prepared by a

qualified hazardous materials consultant. The plan must establish remedial measures and/or soil management practices to ensure construction worker safety and the health of future workers and visitors to the project site during operation of the proposed project. Evidence of regulatory oversight and a regulatory approved plan shall be provided to the City of Mountain View Community Development Department.

In the event that vapor encroachment is discovered, the proposed project shall develop a vapor management plan. The vapor management plan shall be prepared in consultation with applicable regulatory agencies, including the Department of Toxic Substances Control and the Regional Water Quality Control Board, and shall be reviewed and accepted by the City of Mountain View prior to the issuance of demolition and grading permits.

Significance with Mitigation: Less than significant.

4.6.5 Cumulative Impact Analysis

This analysis considers potential impacts of the proposed project when considered along with the potential impacts of the cumulative development projects listed in Table 4-1, *Cumulative Projects List*. Other projects would use, store, transport, and dispose of increased amounts of hazardous materials and thus could pose substantial risks to the public and the environment.

The City's 2030 General Plan EIR identifies a less-than-significant impact with the implementation of standard mitigation measures and development conditions to reduce the potential for contamination associated with hazardous materials in areas adjacent to highways or previously used for agriculture or industrial uses. Future development in the city would be subject to environmental review, as applicable, to mitigate any significant hazards and hazardous materials impacts. The use, storage, transport, and disposal of hazardous materials by other projects would conform with regulations of the multiple agencies described in Section 4.6.1, *Regulatory Background*. Cumulative impacts would be *less than significant* with compliance with such regulations and procedures.

Significance without Mitigation: Less than significant.

4.7 NOISE

This section of the Draft Environmental Impact Report (EIR) describes the regulatory framework and existing conditions related to noise sources and the overall noise environment in the vicinity of the proposed project, evaluates the potential impacts that could occur from development of the proposed project, and details mitigation measures needed to reduce significant impacts.

The technical data and modeling used for this analysis are in Appendix E, *Noise Data*, of this Draft EIR.

Noise and Vibration Fundamentals

Noise is defined as unwanted sound and, when overexposed, is known to have several adverse effects on people, including hearing loss, speech and sleep interference, physiological responses, and annoyance. Although sound can be easily measured, the perception of noise and the physical response to sound complicate the analysis of its impact on people. People judge the relative magnitude of sound sensation in subjective terms such as "noisiness" or "loudness." Following are brief definitions of terminology used in this section.

- **Sound.** A disturbance created by a vibrating object, which when transmitted by pressure waves through a medium such as air, is capable of being detected by the human ear or a microphone.
- **Noise.** Sound that is loud, unpleasant, unexpected, or otherwise undesirable.
- **Decibel (dB).** A unitless measure of sound on a logarithmic scale.
- **A-Weighted Decibel (dBA).** An overall frequency-weighted sound level in decibels that approximates the frequency response of the human ear.
- **Equivalent Continuous Noise Level (L_{eq}).** The mean of the noise level, energy averaged over the measurement period.
- **L_{max}.** The maximum root-mean-square noise level during a measurement period.
- **Statistical Sound Level (L_n).** The sound level that is exceeded "n" percent of time during a given sample period. For example, the L_{50} level is the statistical indicator of the time-varying noise signal that is exceeded 50 percent of the time (during each sampling period), meaning that half of the sampling time, the changing noise levels are above this value and half of the time they are below it. This is called the "median sound level." The L_{10} level, likewise, is the value that is exceeded 10 percent of the time (i.e., near the maximum) and this is often known as the "intrusive sound level." The L_{90} is the sound level exceeded 90 percent of the time and is often considered the "effective background level" or "residual noise level."

4.7 Noise

- **Day-Night Sound Level (L_{dn} or DNL).** The energy-average of the A-weighted sound levels occurring during a 24-hour period, with 10 dB added to the sound levels occurring during the period from 10:00 pm to 7:00 am.
- **Community Noise Equivalent Level (CNEL).** The energy-average of the A-weighted sound levels occurring during a 24-hour period, with 5 dB added to the levels occurring during the period from 7:00 pm to 10:00 pm, and 10 dB added to the sound levels occurring during the period from 10:00 pm to 7:00 am. Note: For general community/environmental noise, CNEL and L_{dn} values rarely differ by more than 1 dB. As a matter of practice, L_{dn} and CNEL values are considered to be equivalent/interchangeable and are treated as such in this assessment.
- **Peak Particle Velocity (PPV).** The peak rate of speed at which soil particles move (e.g., inches per second) due to ground vibration.
- **Sensitive Receptor.** Noise- and vibration-sensitive receptors include land uses where quiet environments are necessary for enjoyment and public health and safety. Residences, schools, motels and hotels, libraries, religious institutions, hospitals, and nursing homes are examples.
- **Vibration Decibel (VdB).** A unitless measure of vibration, expressed on a logarithmic scale and with respect to a defined reference vibration velocity. In the U.S., the standard reference velocity is 1 micro-inch per second ($1x10^{-6}$ in/sec).

SOUND FUNDAMENTALS

Sound is a pressure wave transmitted through the air. It is described in terms of loudness or amplitude (measured in decibels), frequency or pitch (measured in Hertz [Hz] or cycles per second), and duration (measured in seconds or minutes). The standard unit of measurement of the loudness of sound is the decibel. The human ear is not equally sensitive to all frequencies. Sound waves below 16 Hz are not heard at all and are “felt” more like a vibration. Similarly, while people with extremely sensitive hearing can hear sounds as high as 20,000 Hz, most people cannot hear above 15,000 Hz. In all cases, hearing acuity falls off rapidly above about 10,000 Hz and below about 200 Hz. Since the human ear is not equally sensitive to sound at all frequencies, a special frequency dependent rating scale is usually used to relate noise to human sensitivity. The A-weighted decibel scale performs this compensation by weighting frequencies in a manner approximating the sensitivity of the human ear.

Changes of 1 to 3 dBA are detectable under quiet, controlled conditions and changes of less than 1 dBA are usually indiscernible. A 3 dBA change in noise levels is considered the minimum change that is detectable with human hearing in outside environments. A change of 5 dBA is readily discernable to most people in an exterior environment whereas a 10 dBA change is perceived as a doubling (or halving) of the sound.

4.7 Noise

Noise is defined as unwanted sound, and, when overexposed, is known to have several adverse effects on people, including hearing loss, speech and sleep interference, physiological responses, and annoyance. Based on these known adverse effects of noise, the federal government, the State of California, and many local governments have established criteria to protect public health and safety and to prevent disruption of certain human activities.

SOUND MEASUREMENT

Sound pressure is measured through the A-weighted measure to correct for the relative frequency response of the human ear. That is, an A-weighted noise level de-emphasizes low and very high frequencies of sound similar to the human ear's de-emphasis of these frequencies.

Unlike linear units such as inches or pounds, decibels are measured on a logarithmic scale, representing points on a sharply rising curve. An increase of 10 dBA is 10 times more intense than 1 dBA, 20 dBA is 100 times more intense, and 30 dBA is 1,000 times more intense. A sound as soft as human breathing is about 10 times greater than 0 dBA. The decibel system gives a rough connection between the physical intensity of sound and its perceived loudness to the human ear. Ambient sounds generally range from 30 dBA (very quiet) to 100 dBA (very loud).

The decibel level of sound decreases as the distance from the sound source increases. Sound dissipates exponentially with distance from the noise source. This phenomenon is known as "spreading loss." For a single point source, sound levels decrease by approximately 6 dBA for each doubling of distance from the source. This drop-off rate is appropriate for noise generated by on-site operations from stationary equipment or activity at a project site. If noise is produced by a line source, such as highway traffic, the sound decreases by 3 dBA for each doubling of distance in a hard-site environment. Line source noise in a relatively flat environment with absorptive vegetation decreases by 4.5 dBA for each doubling of distance.

Time variation in noise exposure is typically expressed in a steady-state energy level equal to the energy content of the time varying period (called L_{eq}) or, alternately, as a statistical description of the sound level exceeded over some fraction of an observation period. These "Ln" values are typically used to demonstrate compliance with a noise ordinance for stationary sources. Other values typically noted during a noise survey are L_{min} and L_{max}, which represent the minimum and maximum root-mean-square noise levels over a measurement period.

Because community receptors are more sensitive to unwanted noise intrusion during the evening and night, State and local laws require that an artificial dBA increment be added to quiet time noise levels in a 24-hour noise descriptor called the CNEL or DNL.

PSYCHOLOGICAL AND PHYSIOLOGICAL EFFECTS OF NOISE

Physical damage to human hearing begins at prolonged exposure to noise levels higher than 85 dBA. Exposure to high noise levels affects our entire system, with prolonged noise exposure in

4.7 Noise

excess of 75 dBA increasing body tensions, thereby affecting blood pressure, functions of the heart, and the nervous system. Extended periods of noise exposure above 90 dBA can result in permanent hearing damage. When the noise level reaches 120 dBA, even short-term exposure causes a tickling sensation in the ear, called the threshold of feeling. As the sound reaches 140 dBA, the tickling sensation becomes painful, called the threshold of pain. Table 4.7-1, *Typical Noise Levels*, shows typical noise levels from familiar noise sources.

Table 4.7-1 Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
Onset of physical discomfort	120+	
	110	Rock band (near amplification system)
Jet flyover at 1,000 feet		
	100	
Gas lawn mower at 3 feet		
	90	
Diesel truck at 50 feet, at 50 mph		Food blender at 3 feet
	80	Garbage disposal at 3 feet
Noisy urban area, daytime		
	70	Vacuum cleaner at 10 feet
Commercial area		Normal speech at 3 feet
Heavy traffic at 300 feet	60	
		Large business office
Quiet urban daytime	50	Dishwasher, next room
Quiet urban nighttime	40	Theater or large conference room (background)
Quiet suburban nighttime		
	30	Library
Quiet rural nighttime		Bedroom at night or concert hall (background)
	20	
		Broadcast/recording studio
	10	
Lowest threshold of human hearing	0	Lowest threshold of human hearing

Note: dBA = A-Weighted Decibel

VIBRATION FUNDAMENTALS

Vibration is an oscillating motion in the earth. Like noise, vibration is transmitted in waves, but through the earth or solid objects. Unlike noise, vibration is typically of a frequency that is felt rather than heard.

Vibration can be natural—such as earthquakes, volcanic eruptions, or landslides—or human-caused, such as explosions, heavy machinery, or trains. Both natural and human-caused vibration may be continuous, such as from operating machinery, or impulsive, as from an explosion.

As with noise, vibration can be described by both its amplitude and frequency. Amplitude can be characterized in three ways—displacement, velocity, and acceleration. Particle displacement is a measure of the distance that a vibrated particle travels from its original position; for the purposes of soil displacement, it is typically measured in inches or millimeters. Particle velocity is the rate of speed at which soil particles move in inches per second or millimeters per second. Table 4.7-2 presents the human reaction to various levels of peak particle velocity.

Table 4.7-2 Human Reaction to Typical Vibration Levels

Vibration Level Peak Particle Velocity (in/sec)	Human Reaction	Effect on Buildings
0.006–0.019	Threshold of perception, possibility of intrusion	Vibrations unlikely to cause damage of any type
0.08	Vibrations readily perceptible	Recommended upper level of vibration to which ruins and ancient monuments should be subjected
0.10	Level at which continuous vibration begins to annoy people	Virtually no risk of “architectural” (i.e., not structural) damage to normal buildings
0.20	Vibrations annoying to people in buildings	Threshold at which there is a risk to “architectural” damage to normal dwelling—houses with plastered walls and ceilings
0.4–0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause “architectural” damage and possibly minor structural damage

Source: California Department of Transportation, 2013.

Vibrations also vary in frequency, and this affects perception. Typical construction vibrations fall in the 10 to 30 Hz range and usually occur around 15 Hz. Traffic vibrations exhibit a similar range of frequencies; however, due to their suspension systems, buses often generate frequencies

around 3 Hz at high vehicle speeds. It is less common, but possible, to measure traffic frequencies above 30 Hz.

The way in which vibration is transmitted through the earth is called propagation. As vibration waves propagate from a source, the energy is spread over an ever-increasing area such that the energy level striking a given point is reduced with the distance from the energy source. This geometric spreading loss is inversely proportional to the square of the distance. Wave energy is also reduced with distance as a result of material damping in the form of internal friction, soil layering, and void spaces. The amount of attenuation provided by material damping varies with soil type and condition as well as the frequency of the wave.

4.7.1 Regulatory Background

To limit population exposure to physically and/or psychologically damaging as well as intrusive noise levels, the federal government, the State of California, and local governments have established standards and ordinances to control noise.

FEDERAL

Federal Highway Administration

Proposed federal or federal-aided highway construction projects at a new location, or the physical alteration of an existing highway that significantly changes the horizontal or vertical alignment or increases the number of through-traffic lanes, require an assessment of noise and consideration of noise abatement per 23 CFR Part 772, *Procedures for Abatement of Highway Traffic Noise and Construction Noise*. The Federal Highway Administration (FHWA) has adopted noise abatement criteria for sensitive receivers—such as picnic areas, recreation areas, playgrounds, active sport areas, parks, residences, motels, hotels, schools, churches, libraries, and hospitals—when "worst-hour" noise levels approach or exceed 67 dBA L_{eq} (FHWA 1978).

U.S. Environmental Protection Agency

In addition to FHWA standards, the U.S. Environmental Protection Agency (USEPA) has identified the relationship between noise levels and human response. The USEPA determined that over a 24-hour period, an L_{eq} of 70 dBA will result in some hearing loss. Interference with activity and annoyance will not occur if exterior levels are maintained at an L_{eq} of 55 dBA and interior levels at or below 45 dBA. These levels are relevant to planning and design and useful for informational purposes, but they are not land use planning criteria because they do not consider economic cost, technical feasibility, or the needs of the community; therefore, they are not mandated.

The USEPA also set 55 dBA L_{dn} as the basic goal for exterior residential noise intrusion. However, other federal agencies, in consideration of their own program requirements and goals, as well

as the difficulty of actually achieving a goal of 55 dBA L_{dn}, have settled on the 65 dBA L_{dn} level as their standard. At 65 dBA L_{dn}, activity interference is kept to a minimum, and annoyance levels are still low. It is also a level that can realistically be achieved.

U.S. Department of Housing and Urban Development

The U.S. Department of Housing and Urban Development (HUD) has set the goal of 65 dBA L_{dn} as a desirable maximum exterior standard for residential units developed with HUD funding (This level is also generally accepted within the State of California.) Although HUD does not specify acceptable interior noise levels, standard construction of residential dwellings typically provides 20 dBA or more of attenuation with the windows closed. Based on this premise, the interior L_{dn} should not exceed 45 dBA.

Occupational Health and Safety Administration

The federal government regulates occupational noise exposure common in the workplace through the Occupational Health and Safety Administration (OSHA) under the USEPA. Noise limitations would apply to the operation of construction equipment and could also apply to any proposed industrial land uses. Noise exposure of this type is dependent on work conditions and is addressed through a facility's Health and Safety Plan, as required under OSHA, and is therefore not addressed further in this analysis.

STATE

General Plan Guidelines

The State of California, through its General Plan Guidelines, discusses how ambient noise should influence land use and development decisions and includes a table of normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable uses at different noise levels, expressed in CNEL (OPR 2017). A conditionally acceptable designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use and needed noise insulation features are incorporated in the design. By comparison, a normally acceptable designation indicates that standard construction can occur with no special noise reduction requirements. The General Plan Guidelines provide cities and counties with recommended community noise and land use compatibility standards that can be adopted or modified at the local level based on conditions and types of land uses specific to that jurisdiction.

California Building Code

The California Building Code (CBC) is Title 24 of the California Code of Regulations. CBC Part 2, Volume 1, Chapter 12, Section 1206.4, *Allowable Interior Noise Levels*, requires that interior noise levels attributable to exterior sources not exceed 45 dBA in any habitable room. The noise

4.7 Noise

metric is evaluated as either the L_{dn} or the CNEL, whichever is consistent with the noise element of the local general plan.

The State's noise insulation standards for non-residential uses are codified in the California Code of Regulations, Title 24, *Building Standards Administrative Code*, Part 11, *California Green Building Standards Code* (CALGreen). CALGreen noise standards are applied to new or renovation construction projects in California to control interior noise levels resulting from exterior noise sources. Proposed projects may use either the prescriptive method (Section 5.507.4.1) or the performance method (Section 5.507.4.2) to show compliance. Under the prescriptive method, a project must demonstrate transmission loss ratings for the wall and roof-ceiling assemblies and exterior windows when within a noise environment of 65 dBA CNEL or higher. Under the performance method, a project must demonstrate that interior noise levels do not exceed 50 dBA $L_{eq(1hr)}$.

Airport Noise Standards

California Code of Regulations Title 21, Subchapter 6, *Airport Noise Standards*, establishes 65 dBA CNEL as the acceptable level of aircraft noise for persons living in the vicinity of airports. Noise-sensitive land uses are generally incompatible in locations where the aircraft exterior noise level exceeds 65 dBA CNEL, unless an aviation easement for aircraft noise has been acquired by the airport proprietor or the residence is a high-rise with an interior CNEL of 45 dBA or less in all habitable rooms and has an air circulation or air conditioning system, as appropriate. Assembly Bill (AB) 2776 requires any person who intends to sell or lease residential properties in an airport influence area to disclose that fact to the person buying the property

LOCAL

The City of Mountain View General Plan Noise Element discusses the effects of noise exposure on the population and sets policies designed to protect residents from excessive and persistent noise intrusions. Policy NOI 1.7: Stationary Sources, restricts noise levels from stationary sources through enforcement of the Noise Ordinance and will only apply to long-term operational noise.

The City of Mountain View Code of Ordinances that apply to the project are as follows.

Construction Noise Standards

Under Section 8.70, Construction Noise, the hours allowed for construction are stated below:

> No construction activity shall commence prior to 7:00 a.m. nor continue later than 6:00 p.m., Monday through Friday. No work is permitted on Saturday unless prior written approval is granted by the chief building official. The term "construction activity" shall include any physical activity on the construction site or in the staging area, including the

delivery of materials. In approving modified hours, the chief building official may specifically designate and/or limit the activities permitted during the modified hours. No construction activity is allowed on Sunday or recognized holidays.

Stationary Noise Standards

Under Section 21.26, Stationary equipment noise, the noise limits for stationary equipment (such as heating, ventilation, and air conditioning mechanical systems, and air compressors). are stated below:

No person shall own or operate on any property any stationary equipment, such as, but not limited to, air compressors, equipment for swimming pools, spas, or air conditioners, which produces a sound level exceeding 55 dB(A) (50 dB(A) during the night, 10 p.m. to 7 a.m.) when measured at any location on any receiving residentially used property.

4.7.2 Existing Conditions

The dominant community noise sources in the project area are Caltrain railroad train pass-bys and the Central Expressway traffic. Noise associated with local surface streets, existing Mountain View Police Department operations, and neighborhood activities also make up the noise environment at the project site. Based on the Mountain View 2030 General Plan Figure 7.3, *Noise Contours 2030*, the project site lies within the 65 dBA to 70 dBA CNEL noise contours attributable to Caltrain railroad pass-bys and Central Expressway traffic.

4.7.3 Significance Criteria

The Initial Study prepared for this Draft EIR (see Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments*) identified that the proposed project would not result in a significant impact for the following significance criterion:

> For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Appendix G, *Environmental Checklist Form*, of the California Environmental Quality Act Guidelines states that the proposed project would result in a significant noise impact if it would:

a) Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

b) Generate excessive groundborne vibration or groundborne noise levels.

4.7 Noise

CONSTRUCTION NOISE AND VIBRATION THRESHOLDS

The City does not have specific limits or thresholds for construction noise. Therefore, the Federal Transit Administration (FTA) construction noise criterion of 80 dBA $L_{eq(8hr)}$ is used in this analysis to assess construction noise impacts at sensitive receptors.

STATIONARY NOISE THRESHOLDS

The project would have a significant impact if operational stationary noise sources exceed the City of Mountain View equipment noise standards of 55 dB(A) (50 dB(A) during the night, 10 p.m. to 7 a.m.).

TRANSPORTATION NOISE THRESHOLDS

A project will normally have a significant effect on the environment related to noise if it would substantially increase the ambient noise levels for adjoining areas. Most people can detect changes in sound levels of approximately 3 dBA under normal, quiet conditions, and changes of 1 to 3 dBA are detectable under quiet, controlled conditions. Changes of less than 1 dBA are usually indiscernible. A change of 5 dBA is readily discernible to most people in an exterior environment. Based on this, the following thresholds of significance, similar to those recommended by the FAA, are used to assess traffic noise impacts at sensitive receptor locations. A significant impact would occur if the traffic noise increase would exceed:

- 1.5 dBA in ambient noise environments of 65 dBA CNEL and higher
- 3 dBA in ambient noise environments of 60 to 64 dBA CNEL
- 5 dBA in ambient noise environments of less than 60 dBA CNEL

VIBRATION THRESHOLDS

The City does not have specific limits or thresholds for construction vibration. Therefore, the recommended criteria by the FTA for vibration damage shown in Table 4.7-4 are used in this analysis.

4.7.4 Project Impact Analysis

The following impact analysis addresses thresholds of significance for which the Initial Study disclosed potentially significant impacts.

a) Would the proposed project generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction Vehicles

The City does not have specific limits or thresholds for construction noise; to provide for a conservative and quantified assessment of potential construction noise impacts, this analysis uses the FTA-recommended criterion of 80 dBA $L_{eq(8hr)}$ for residential uses to evaluate project construction noise impacts.

Construction activity, including worker, material delivery, and large equipment delivery trips to and from the project site, would temporarily increase noise levels along local site access roadways. Individual construction vehicle and haul trucks may create momentary noise levels of up to approximately 85 dBA (L_{max}) at 50 feet from the vehicle. These occurrences would generally be infrequent and short in duration. Construction generates temporary trips from workers, vendors, and haul trucks. The period during which building construction, paving, and architectural coating phases would overlap is anticipated to generate the most trips, with an estimated total of 120 per day. The existing traffic volume on South Shoreline Boulevard is 23,500 daily trips.[1] The addition of 120 trips when compared to the existing traffic volumes in the vicinity of the proposed project would result in a noise increase of approximately 0.1 dBA Ldn or less. Most people can detect changes in sound levels of approximately 3 dBA under normal, quiet conditions; changes of 1 to 3 dBA are detectable under quiet, controlled conditions; and changes of less than 1 dBA are usually indiscernible. Therefore, the increase of 0.1 dBA L_{dn} would not be noticeable and noise impacts from construction vehicles would therefore be *less than significant*.

Construction Equipment

Noise generated during construction is based on the number and type of equipment used, the load and power requirements to accomplish tasks for each construction phase, and the timing and duration of the noise-generating activities. The extent to which construction noise affects receptors varies based on factors such as noise attenuation due to distance, the ambient noise environment, and the location of the construction activity in relation to the receptor (such as intervening barriers and topography). Each phase of construction involves the use of different kinds of construction equipment and therefore has its own distinct noise characteristics. Noise levels from construction activities are dominated by the loudest piece of construction equipment. The dominant noise source is typically the engine, although intermittent events (such as dropping of materials) can also be noticeable. Heavy equipment, such as a dozer or a loader, can have maximum, short-duration noise levels of 85 dBA or greater at 50 feet. Because

[1] City of Mountain View, 2012, *City of Mountain View Draft 2030 General Plan and Greenhouse Gas Reduction Program EIR.*

4.7 Noise

noise from construction equipment is intermittent and diminishes at a rate of 6 dBA per doubling distance, the average noise levels at noise-sensitive receptors would be lower, because mobile construction equipment would move around the site with different loads and power requirements.

Using information provided by the City of Mountain View and methodologies and inputs employed in the air quality assessment, the RCNM was used to model construction noise from each of the major phases. Construction activities associated with the proposed project would not require blasting or pile driving. During building construction, a bore/drill rig is proposed for the building foundations. Since the RCNM calculations do not account for shielding due to intervening buildings and structures, ground effects, or air absorption, the results of these calculations are conservative (that is, they represent a reasonable worst-case scenario). Table 4.7-5, *Project-Related Construction Noise*, summarizes the estimated construction noise levels for each construction phase at a distance of 50 feet.

Table 4.7-5 Project-Related Construction Noise

Construction Activity Phase	RCNM Reference Noise Level at 50 ft (dBA L_{eq})	Residences to the South at 130 ft (dBA L_{eq})	Residences to the West at 100 ft (dBA L_{eq})	Residences to the East at 115 ft (dBA L_{eq})
Demolition	85	77	79	78
Site Preparation	83	75	77	76
Grading	85	77	79	78
		at 120 ft	**at 125 ft**	**at 160 ft**
Building Construction	83	75	75	73
Architectural Coating	74	66	66	64
		at 205 ft	**at 110 ft**	**at 95 ft**
Paving	83	71	76	77

Source: PlaceWorks, 2024, Construction Noise Modeling (see Appendix E, *Noise Data*).
Notes: Noise levels rounded to the nearest decibel.

The City has not established quantified noise limits for temporary construction activities; this analysis uses the FTA-recommended noise level limit of 80 dBA $L_{eq(8hr)}$ for residential receptors to assess construction noise impacts. As shown in Table 4.7-5, construction levels would range between 64 dBA L_{eq} to 79 dBA L_{eq} at adjacent residential uses during all phases of construction activity and would not exceed the daytime 80 dBA $L_{eq(8\text{-}hr)}$ threshold. However, project construction noise levels would generate a substantial temporary increase of up to +9 dBA over ambient noise levels at surrounding noise sensitive uses. Therefore, this impact is considered **significant**.

Impact NOI-1: The proposed project would generate a substantial temporary increase in ambient noise levels during construction.

Mitigation Measure NOI-1: The project sponsor shall incorporate the following practices into the construction contract specifications to be implemented by the construction contractor during the entire construction phase of the project. The project sponsor and contractors shall prepare a Construction Noise Control Plan that includes the following measures:

- Limit construction to the hours of 8:00 a.m. to 6:00 p.m., Monday through Friday, and between 9:00 a.m. to 5:00 p.m. on weekends.
- Construct temporary noise barriers, where feasible, to screen receptors to the west, south, and east from the construction area. Temporary noise barrier fences would provide a 5 dBA noise reduction if the noise barrier interrupts the line-of-sight between the noise source and receptor and if the barrier is constructed in a manner that eliminates any cracks or gaps.
- At least 21 days prior to the start of construction activities, property owners within a 500-foot radius of the project site shall be notified of the planned construction. The notification shall include a brief description of the project, a description of the construction phases to occur, the construction hours noted above, and the overall construction duration. The notification shall include the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint.
- At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours, as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, they shall investigate, take appropriate corrective action, and report the action to the City.
- Prior to the start of construction, the project sponsor shall retain a qualified acoustical consultant to conduct construction noise monitoring during the major phases of project construction at select locations in the surrounding neighborhood. The number and location of monitoring positions, and the construction phases during which monitoring shall occur, shall be determined by City staff in consultation with the acoustical consultant. All sound level meters used during monitoring shall satisfy the American National Standards Institute (ANSI) standard of Type 1 instrumentation. All measurements shall be at least 5 feet above the ground and

away from reflective surfaces. The noise monitoring data and results shall be submitted in a memorandum to the City on a weekly basis during the construction phases requiring monitoring, along with comparison to the 80 dBA Leq (8-hr) construction noise limit. If exceedances of the construction noise limit are found, the applicant's construction contractor shall modify construction techniques and equipment to reduce the construction noise below the 80 dBA Leq (8-hr) limit.

- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. The signs shall note that all other equipment shall be turned off if not in use for more than 5 minutes. The construction manager shall be responsible for enforcing these noise reduction requirements.
- Construction trucks and equipment shall utilize the best available noise control techniques including improved mufflers, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds, wherever feasible.
- The contractor shall use impact tools that are hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.
- Stationary noise sources (e.g., generators and air compressors) shall be located as far from sensitive receptors as possible, and they shall be muffled and enclosed within temporary sheds, insulation barriers, or other measures to reduce noise levels to the extent feasible.
- Stockpiling of materials shall be located as far as feasible from nearby noise-sensitive receptors.
- During the entire active construction period, the use of noise-producing signals—including horns, whistles, alarms, and bells—shall be for safety warning purposes only. The construction manager shall require the use of smart back-up alarms on equipment. (These devices automatically adjust the alarm level based on the background noise level.) Alternately, equipment back-up alarms may be turned off and replaced with human spotters in compliance with all safety requirements and laws.

Significance with Mitigation: Less than significant. With implementation of Mitigation Measure NOI-1, particularly the use of equipment silencers and mufflers, construction noise would be

reduced by up to 10 dBA.[2] With Mitigation Measure NOI-1, construction noise levels are estimated to be 69 dBA $L_{eq(8\text{-}hr)}$ or less, which would not generate a substantial temporary increase over ambient noise levels at surrounding noise sensitive uses.

Operational Sources

Operational noise sources associated with the proposed project would be similar to existing operational noise and would include vehicles parking, K-9 training, and heating, ventilation, and air conditioning (HVAC) units. The proposed indoor shooting range would be a new use and would follow industry standards and regulations to address noise, reverberation, and echoes. The project would add new sources of stationary HVAC noise for the new building, but these would be comparable or quieter than other, similar sources at the existing building and would not result in notable changes at adjacent residential uses. The number of parking spaces would increase from existing conditions with the implementation of the project and its addition of a parking garage and surface parking expansion. Overall parking noise would be similar to existing conditions. Based upon previous noise measurements conducted, the single event noise level (SEL) attributable to a parking event is 71 dB SEL at 50 feet. To quantify the parking noise level for proposed parking spaces adjacent to the existing nearby residential uses, a conservative approach to the number of parking events occurring in a peak hour is applied. Assuming that each parking space adjacent to the existing residential uses were to fill and empty during the peak hour, the noise level is predicted to be 43 dB L_{eq} at residential uses west of the northeast surface parking expansion and 44 dB L_{eq} at residential uses to the south of the central parking expansion to a noise level of 43 dBA $L_{eq.}$ Operational noise sources would be similar to existing conditions and would not exceed the City's daytime and nighttime stationary noise standards of 55 dBA L_{eq} and 50 dBA L_{eq}, respectively. Therefore, no significant permanent stationary source noise increases would occur and operational impacts would be **less than significant**.

b) Would the proposed project generate excessive groundborne vibration or groundborne noise levels?

Increases in groundborne vibration levels attributable to the proposed project would be associated with construction-related activities. Construction on the project site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved. Ground vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. The effect on buildings in the vicinity of the construction site often varies depending on soil type, ground strata, and construction characteristics of the receiver building(s). The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, to slight

[2] Federal Highway Administration, *Special Report – Measurement, Prediction, and Mitigation*, https://www.fhwa.dot.gov/ENVIRonment/noise/construction_noise/special_report/hcn04.cfm, accessed March 4, 2022.

damage at the highest levels. Groundborne vibrations from construction activities rarely reach levels that damage structures.

Table 4.7-6, *Construction Equipment Vibration Levels for Architectural Damage*, identifies vibration levels for typical construction equipment at a reference distance of 25 feet and to varying distances of adjacent residential uses, which is the estimated distance from construction equipment activity to the closest structures to the project. The Municipal Code does not have quantified limits for potential architectural damage from construction vibration. However, the FTA provides criteria for acceptable levels of groundborne vibration for various types of buildings and structures.[3] This analysis uses a threshold of 0.2 inches per second (in/sec) peak particle velocity (PPV) for non-engineered timber and masonry buildings to apply to the surrounding residential structures. As shown in Table 4.7-6, based on FTA data, vibration velocities from typical heavy construction equipment operations that would be used during project construction, including drilling during building construction for foundations, would range from 0.003 to 0.21 in/sec PPV at 25 feet from the source of activity.

Table 4.7-6 Construction Equipment Vibration Levels for Architectural Damage

Equipment	Approximate PPV at 25 feet (in/sec)	Residences to the South Approximate PPV at 80 feet (in/sec)	Residences to the West Approximate PPV at 35 feet (in/sec)	Residences to the East Approximate PPV at 70 feet (in/sec)
Vibratory Roller	0.21	0.037	0.127	0.045
Large Bulldozer	0.089	0.016	0.054	0.019
Loaded Trucks	0.076	0.013	0.046	0.016
Jackhammer	0.035	0.006	0.021	0.007
Small Bulldozer	0.003	0.001	0.002	0.001

Source: Federal Transit Administration, 2018, Transit Noise and Vibration Impact Assessment Manual.
Note: PPV, peak particle velocity

As shown in Table 4.7-6, vibration levels would not exceed the FTA's threshold of 0.2 in/sec PPV at all adjacent residential uses. Vibration levels could reach up to 0.127 in/sec PPV if a vibratory roller is used 35 feet of the nearest structure. However, vibratory rollers are used for paving and the nearest proposed paving activities would be approximately 35 feet from nearby structures and the FTA threshold of 0.2 in/sec PPV would not be exceeded. Therefore, vibration from project construction equipment would result in a **less-than-significant** impact.

Significance without Mitigation: Less than significant.

[3] Federal Transit Administration, 2018, *Transit Noise and Vibration Impact Assessment Manual*.

4.7.5 Cumulative Impact Analysis

Construction Noise

Like stationary-source noise, construction noise and vibration impacts are confined to a localized area of impact. Noise from construction activities would be temporary and would be less than significant after mitigation. Cumulative impacts would only occur if other projects were being constructed in the vicinity of the project at the same time as the project. There are no other, known future projects in the vicinity of the proposed project that might add simultaneous construction activity noise (to the project's construction noise). Therefore, the proposed project would not create a cumulatively considerable stationary noise impact and cumulative construction impacts would be **less than significant**.

Stationary-Source Noise

Stationary-source noise generated by the project is localized and limited to noise impacts to noise-sensitive receptors near the project site. Noise from operation of the project would not result in significant noise impacts to the residential uses in the vicinity. Further, there are no other, known future projects in the vicinity of the proposed project that would add more stationary sources so as to notably contribute to the nearby receptors' community noise levels. Therefore, the proposed project would not create a cumulatively considerable stationary noise impact and cumulative operational impacts would be **less than significant**.

Significance without Mitigation: Less than significant.

4.7 Noise

This page is intentionally left blank.

4.8 TRANSPORTATION

This section of the Draft Environmental Impact Report (EIR) evaluates the potential for implementation of the proposed project to result in a significant transportation impact. As described in Chapter 2, *Introduction*, of this Draft EIR, the only significance criterion identified in the California Environmental Quality Act (CEQA) Guidelines that is evaluated in this chapter is regarding conflicting with or being inconsistent with CEQA Guidelines Section 15064.3, *Determining the Significance of Transportation Impacts,* subdivision (b), *Criteria for Analyzing Transportation Impacts*. Therefore, the information in this chapter is only focused on the issue of vehicle miles traveled (VMT), which is a measure of circulation network use or efficiency that accounts for the number of daily vehicle trips generated, multiplied by the length or distance of those trips. VMT represents a number of daily miles driven and can be expressed in different ways, including total VMT, which is an aggregate value measured in miles, and VMT per capita or VMT per employee, both of which are performance metrics measured in the number of miles driven per person.

4.8.1 Regulatory Background

STATE

Senate Bill 743

On September 27, 2013, Senate Bill (SB) 743 was signed into law.[1] The Legislature found that with the adoption of the Sustainable Communities and Climate Protection Act of 2008, commonly referred to by its legislative bill number Senate Bill (SB) 375, the State had signaled its commitment to encourage land use and transportation planning decisions and investments that reduce VMT and thereby contribute to the reduction of greenhouse gas emissions (GHG), as required by the California Global Warming Solutions Act of 2006 (Assembly Bill [AB] 32). SB 743 required CEQA lead agencies to shift away from using traditional level of service standards and automobile delay to determine significant traffic impacts. It should be noted that level of service standards are used outside of the CEQA document to evaluate other non-CEQA transportation impacts of development projects, such as congestion, circulation, and safety issues and concerns.

California Environmental Quality Act: Section 15064.3

In response to the passing of SB 743, the Governor's Office of Land Use and Climate Innovation (LCI) (formally the Office of Planning and Research) updated the CEQA Guidelines Section

[1] An act to amend Sections 65088.1 and 65088.4 of the Government Code, and to amend Sections 21181, 21183, 21186, 21187, 21189.1, and 21189.3 of, to add Section 21155.4 to, to add Chapter 2.7 (commencing with Section 21099) to Division 13 of, to add and repeal Section 21168.6.6 of, and to repeal and add Section 21185 of, the Public Resources Code, relating to environmental quality.

4.8 Transportation

15064.3 to include new transportation-related evaluation metrics, including VMT. Specifically, Section 15064.3(b)(1) and (2) list the criteria for analyzing transportation impacts for land use projects and transportation projects, respectively. Section 15064.3(b)(3) and (4) describe analysis approaches including qualitative analysis and other methodologies, respectively.

LOCAL

In keeping with the new CEQA requirements pursuant to SB 743, the City released its Multi-Modal Transportation Analysis Handbook (MTA Handbook), which establishes a clear and consistent technical approach to undertaking transportation analysis for projects in Mountain View. The MTA Handbook is based on the current City processes and state-of-practice in transportation planning and traffic engineering. The City expects these guidelines to result in studies that provide a comprehensive and accurate analysis of multi-modal transportation and traffic effects, which provide valuable information for decision-makers and the public as the City reviews project proposals. The MTA Handbook provides a methodology for assessing transportation operational effects of projects and associated operational improvements. Specifically, Section 4.4, *Vehicle Miles Traveled (VMT) Analysis*, of the MTA Handbook states that a project shall undertake VMT analysis as required under CEQA requirements and outlined in Appendix A (CEQA Transportation Analysis) and Appendix B (VMT Analysis Requirement Checklist) of the MTA Handbook. Appendix A includes guidance on when a project shall undertake a VMT analysis and when a project is exempt from a quantitative VMT analysis. Appendix B includes a checklist that is used to determine if a project is screened out from the preparation of a quantitative VMT analysis.

4.8.2 Existing Conditions

As described in Chapter 3, *Project Description*, of the Draft EIR, the project site is currently occupied by the Mountain View Police Services - Fire Administration building and a pump station, K-9 training area, 42-stall public parking lot, 110-stall, restricted-access parking lot, for a total of 152 parking spaces. The project site currently has 169 employees.

4.8.3 Significance Criteria

The Initial Study prepared for this Draft EIR (see Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments*) identified that the proposed project would not result in a significant impact for the following significance criteria:

- Would the project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?
- Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

- Would the project result in inadequate emergency access?

The proposed project would have a significant impact under Appendix G, *Environmental Checklist Form*, of the California Environmental Quality Act (CEQA) Guidelines if it would:

a) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b).

4.8.4 Project Impact Analysis

The following impact analysis addresses the threshold of significance for which the Initial Study disclosed potentially significant impacts.

a) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

The proposed project would replace the existing Mountain View Police Services - Fire Administration building with a new Public Safety Building with the same local community-serving use and purpose for the residents of Mountain View. While the on-site parking would increase from 152 to 244 spaces, and the building's maximum capacity is designed for up to 242 employees, once built, the proposed Public Safety Building would have an immediate personnel increase of thirteen (13) environmental health staff who would be relocated to the project site as part of the proposed project. This increase in staff is not substantial and represents an approximately 8-percent increase from existing conditions. Therefore, implementation of the proposed project would generate a nominal increase in vehicle trips. However, because the new employees at the project site would be relocated from existing office space elsewhere in the city, the increase in trips would not represent net new trips for the city as a whole.

Further, the project does not generate any new population and at full capacity would serve the city population overtime as it grows. Pursuant to the City's MTA Handbook's Methodology, "Public services (e.g., police, fire stations, libraries, community centers, public utilities) do not generally generate substantial VMT. Instead, these land uses are often built in response to developments from other land uses (e.g., office and residential) and typically serve local communities." The MTA Handbook also states that public services buildings can be evaluated using the retail thresholds. As stated, the proposed project will replace the existing use with the same community-serving uses with a net new building size of approximately 30,000 square feet, which is less than the 50,000 square-foot local-serving retail project size that the City finds to have a less-than-significant VMT impact.

Additionally, a key environmental aspect of VMT is its relationship to greenhouse gas (GHG) emissions. As discussed in Section 4.5, *Greenhouse Gas Emissions*, of this Draft EIR, the proposed project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment and would not conflict with an applicable plan,

policy or regulation adopted for the purpose of reducing GHG emissions. For these reasons, the project would not conflict with or be consistent with CEQA Guidelines Section 15064.3 and the impact is **less than significant**.

Significance without Mitigation: Less than significant.

4.8.5 Cumulative Impact Analysis

The analysis of the proposed project, above, addresses cumulative impacts to the transportation network in the city and its surroundings; accordingly, cumulative impacts would be the same as those discussed above and no additional analysis is warranted.

Significance without Mitigation: Less than significant.

5. Alternatives to the Proposed Project

5.1 INTRODUCTION

This chapter presents the alternatives analysis for the proposed project, as required by the California Environmental Quality Act (CEQA). CEQA requires that an environmental impact report (EIR) include a discussion of reasonable project alternatives that would "feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any significant effects of the project and evaluate the comparative merits of the alternatives" (CEQA Guidelines sec. 15126.6[a]).

The discussion includes an explanation of the methodology used to select alternatives to the proposed project, with the intent of identifying potentially feasible alternatives that could avoid or substantially lessen the significant impacts identified for the proposed project while still meeting most of the basic project objectives, pursuant to CEQA Guidelines Section 15126.6(a). This chapter identifies a reasonable range of alternatives that meet these criteria, and these alternatives are evaluated with respect to minimizing adverse environmental effects as compared to the proposed project. It also describes other alternatives and alternative concepts that were considered but eliminated from detailed consideration and the reasons for their elimination. For the alternatives selected for analysis, this chapter evaluates the impacts of the alternatives against baseline environmental conditions and compares the potential impacts of the alternatives with those of the proposed project. Finally, as required under CEQA Guidelines Section 15126.6(e), based on this analysis, this chapter then discusses the Environmentally Superior Alternative.

The discussion in this chapter is intended to inform the public and decision makers of feasible alternatives to the proposed project that would avoid or substantially lessen any of the significant effects of the proposed project. Section 15126.6, "Consideration and Discussion of Alternatives to the Proposed Project," of the CEQA Guidelines states that:

> An EIR shall describe a range of reasonable alternatives to the project, or the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination

and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason. (sec. 15126.6[a])

5.2 FACTORS CONSIDERED WHEN DEVELOPING ALTERNATIVES

This section describes the basis for determining the range of CEQA alternatives and identifies the specific alternatives that are analyzed in this Draft EIR. The primary factors considered when determining feasible alternatives to the proposed project are the identified project objectives and the significant impacts that have been identified for the proposed project.

5.2.1 Project Objectives

Chapter 3, Section 3.3, *Statement of Objectives*, lists the objectives that have been established for the proposed project and will aid decision makers in their review of the project, the project alternatives, and associated environmental impacts.

5.2.2 Significant Impacts

Apart from the No Project Alternative, alternatives to a project should be evaluated because of their ability to feasibly attain most of the basic objectives of the project and avoid or lessen the project's identified significant impacts. The proposed project would result in 12 significant impacts.

LESS-THAN-SIGNIFICANT IMPACTS WITH MITIGATION

The following impacts were found to be less than significant with implementation of mitigation measures.

- **Impact AIR-1:** Without mitigation, construction activities for the proposed project could generate fugitive dust that exceeds State standards.
- **Impact AIR-2:** Construction activities for the proposed project could generate cancer risks above acceptable levels for the maximally exposed residential receptor.
- **Impact BIO-1:** Tree removal and demolition activities during site clearance could destroy active nests, and/or otherwise interfere with nesting of birds protected under federal and State law.
- **Impact BIO-2:** The proposed development would result in removal of trees protected under City's Municipal Code.
- **Impact CUL-2:** Construction activities for the proposed project have the potential to cause a substantial adverse change in the significance of an archaeological resource pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15064.5.

- **Impact CUL-3:** Construction activities for the proposed project have the potential to result in unanticipated discovery of human remains interred outside of dedicated cemeteries.
- **Impact CUL-4:** Construction activities for the proposed project have the potential to cause a significant impact to an unknown tribal cultural resource as defined in Public Resources Code 21074.
- **Impact GEO-1:** The construction activities, increased site occupancy, and development of new structures under the proposed project could exacerbate an existing hazard associated with liquefaction due to seismic events.
- **Impact GEO-2:** The construction activities, development, and increased site occupancy involved in the proposed project could exacerbate an existing hazard associated with unstable soils due to seismically induced liquefaction.
- **Impact HAZ-1:** The construction activities and increased site occupancy involved in the proposed project could exacerbate an existing hazard associated with the release of hazardous materials originating from off-site land uses.
- **Impact NOI-1:** The proposed project would generate a substantial temporary increase in ambient noise levels during construction.

SIGNIFICANT AND UNAVOIDABLE IMPACTS

The following impact was found to be significant and unavoidable even with implementation of mitigation measures.

- **Impact CUL-1:** The proposed project would remove the historical resource on the project site that is eligible for listing in the California Register under Criterion 3 as a significant example of the work of master architect Goodwin Steinberg.

5.3 ALTERNATIVES CONSIDERED AND REJECTED

CEQA Guidelines Section 15126.6(c) requires EIRs to identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination. CEQA Guidelines Section 15126.6(c) provides that among the factors that may be used to eliminate alternatives from detailed consideration in the EIR are (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts. Following is a discussion of alternatives considered and rejected, along with the reasons that alternative was not included in the analysis.

OFF-SITE/ALTERNATE SITE ALTERNATIVE

CEQA requires that the discussion of alternatives focus on alternatives to the project or its location that are capable of avoiding or substantially lessening any significant effects of the project. The key question and first step in the analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR (CEQA Guidelines Section 15126.6(a)]). It is presumed that an alternate site could be identified that would avoid the proposed project's significant-and-unavoidable impact associated with historic resources. However, in general, any development of the size and type proposed by the project would have substantially the same impacts on air quality, biological resources, noise, and tribal cultural resources. Without a site-specific analysis, specific impacts on cannot be evaluated. In addition, this alternative would not meet the project's objective to reuse the site of the existing Mountain View Police Services - Fire Administration building.

Because no suitable alternative site that could meet the basic objectives of the project would reduce all significant impacts, a feasible location alternative was not identified and was not evaluated further.

5.4 ALTERNATIVES SELECTED FOR ANALYSIS

The following alternatives have been determined to represent a reasonable range of alternatives that have the potential to feasibly attain most of the objectives of the proposed project and that may avoid or substantially lessen any of the significant impacts of the proposed project.

- No Project Alternative
- Historic Preservation Alternative

The analyses of the project alternatives focus on these same significance criteria evaluated in Chapter 4 of this Draft EIR because both project alternatives would be located on the same project site as the proposed project, and would entail the same building size and footprint as exists under existing conditions. Thus, both project alternatives would either represent a continuation of baseline of conditions or would have the potential to affect the same environmental resources that would be affected under the proposed project.

5.5 ALTERNATIVE A: NO PROJECT ALTERNATIVE

Under the No Project Alternative, the proposed project would not be approved. No development activities would occur on the project site, which would remain in its existing condition. The project site is currently occupied by the Mountain View Police Services - Fire

Administration building; a 42-stall public parking lot; a 110-stall, restricted-access parking lot' a pump station; and a K-9 training area. Under this alternative, these facilities would remain on the project site, and no changes in the use or occupancy of the project site would occur. Unlike under the proposed project, under the No Project Alternative environmental health staff would not be relocated to the project site.

5.5.1 Air Quality

As described in Section 4.1, *Air Quality*, the proposed project would result in two significant-but-mitigable impacts associated with air emissions from construction activities. These impacts would be less than significant with the implementation of Mitigation Measure AIR-1 and AIR-2. Operational and odor impacts would be less than significant without mitigation.

Under the No Project Alternative, no construction activities would occur. Therefore, the project's two significant-but-mitigable impacts would be avoided.

Under the proposed project, all new facilities would meet current State building standards and would be Leadership in Energy and Environmental Design (LEED) Gold certified, and would thus be designed with high-efficiency fixtures and energy conservation features. The No Project Alternative would not include these beneficial project features. However, under project operations of both the proposed project and the No Project Alternative, the primary source of long-term criteria air pollutants would be from project-related vehicle trips. Because the No Project Alternative would involve reduced on-site parking, a reduced building size, and reduced building occupancy in comparison to the proposed project, it is expected that this alternative would generate fewer vehicle trips than the proposed project. Therefore, overall operational emissions are expected to be reduced when compared to the proposed project.

Overall, the No Project Alternative would result in **reduced** air quality impacts when compared to the proposed project.

5.5.2 Biological Impacts

As described in Section 4.2, *Biological Resources*, construction of the proposed project would result in two significant-but-mitigable impacts associated with tree removal and potential disturbance to nesting birds. These impacts would be less than significant with the implementation of Mitigation Measure BIO-1 and BIO-2.

The No Project Alternative would not involve construction activities and thus would avoid the project's significant-but-mitigable impacts. Therefore, impacts would be **reduced** when compared to the proposed project.

5.5.3 Cultural and Tribal Cultural Resources

As described in Section 4.3, *Cultural and Tribal Cultural Resources*, the proposed project would result in a significant and unavoidable impact associated with the demolition of the Mountain View Police Services - Fire Administration building, a historical resource. In addition, the proposed project would result in three significant-but-mitigable impacts associated with construction activities for the proposed project that have the potential to adversely affect or disturb unknown subsurface archaeological resources, human remains, and tribal cultural resources. These impacts would be less than significant with the implementation of Mitigation Measures CUL-2, CUL-3, and CUL-4, respectively.

The No Project Alternative would not involve demolition activities that would remove a built historic resource or construction activities that could disturb unknown subsurface resources. Therefore, it would avoid the project's significant cultural and tribal cultural resource impacts and impacts would be **reduced** when compared to the proposed project.

5.5.4 Geology and Soils

As described in Section 4.4, *Geology and Soils*, the proposed project would result in two significant-but-mitigable associated with the exacerbation of existing soil and seismic hazards. These impacts would be less than significant with the implementation of Mitigation Measures GEO-1 and GEO-2.

The No Project Alternative would not involve construction activities that would involve ground disturbance or develop new structures. The No Project Alternative would not involve any changes to the current use or occupancy of the project site and would not expose additional people to existing hazards when compared to existing conditions. Therefore, it would avoid the project's significant-but-mitigable geology and soils impacts and impacts would be **reduced** when compared to the proposed project.

5.5.5 Greenhouse Gas Emissions

As described in Section 4.5, *Greenhouse Gas Emissions*, the proposed project would result in less-than-significant greenhouse gas (GHG) emissions impacts, and mitigation is not required.

The No Project Alternative would not involve construction activities and thus would result in reduced construction phase GHG emissions.

As described in Section 5.5.1, *Air Quality*, under the proposed project, all new facilities would meet current State building standards and would be LEED Gold certified, and would thus be designed with high-efficiency fixtures and energy conservation features. The No Project Alternative would not include these beneficial project features. However, because the No Project Alternative would involve reduced on-site parking, a reduced building size, and reduced

building occupancy in comparison to the proposed project, it is expected that operation of this alternative would generate fewer vehicle trips and thus reduced GHG emissions when compared to the proposed project.

Overall, neither the proposed project nor the No Project Alternative would result in significant GHG emissions impacts. Therefore, the No Project Alternative would result in **similar** impacts when compared to the proposed project.

5.5.6 Hazards and Hazardous Materials

As described in Section 4.6, *Hazards and Hazardous Materials*, the proposed project would result in one significant-but-mitigable impact associated with potential exposure of future construction workers and future site occupants to the release of hazardous materials originating from former off-site land uses. This impact would be less than significant with the implementation of Mitigation Measure HAZ-1.

The No Project Alternative would not involve construction activities or increase the site occupancy of the project site when compared to existing conditions. Therefore, it would avoid the project's significant-but-mitigable impact associated with exacerbating a potential existing hazard and impacts would be **reduced** when compared to the proposed project.

5.5.7 Noise

As described in Section 4.7, *Noise*, the proposed project would result in one significant-but-mitigable impact associated with construction activities. This impact would be less than significant with the implementation of Mitigation Measure NOI-1.

The No Project Alternative would not involve construction activities. Therefore, it would avoid the project's significant-but-mitigable impact.

As described in Section 4.7, *Noise*, the proposed project is expected to result in similar overall levels of operational noise when compared to existing conditions. The No Project Alternative would not increase the site occupancy of the project site when compared to existing conditions and is expected to result in fewer vehicle trips when compared to the proposed project. Therefore, operational noise is expected to be slightly reduced when compared to the proposed project.

Overall, noise impacts would be **reduced** when compared to the proposed project.

5.5.8 Transportation

As described in Section 4.8, *Transportation*, the proposed project would result in less-than-significant transportation impacts, and mitigation is not required.

The No Project Alternative would not involve any changes to the current use or occupancy of the project site. Therefore, it would not result in any vehicle trips in comparison to existing conditions.

Overall, neither the proposed project nor the No Project Alternative would result in significant transportation impacts. Therefore, the No Project Alternative would result in **similar** impacts when compared to the proposed project.

5.6 ALTERNATIVE B: HISTORIC PRESERVATION ALTERNATIVE

Under the Historic Preservation Alternative, the existing, 44,914-square-foot building would not be demolished and the proposed project would occur within the existing Mountain View Police Services - Fire Administration building. This alternative assumes that the existing parking garage would be reconfigured and/or expanded, or that new structured parking would be built, to accommodate the increased parking supply included in the proposed project. While parking areas would be reconfigured or expanded to accommodate more vehicles, the overall site access would not be changed.

Because the building size would not increase from existing conditions, it is assumed that this alternative would include interior renovations to upgrade existing facilities but would not include any notable expansions to existing facilities, amenities, or offices for Mountain View Police Department staff. In addition, unlike under the proposed project, under this alternative environmental health staff would not be relocated to the proposed project.

5.6.1 Air Quality

As described in Section 4.1, *Air Quality*, the proposed project would result in two significant-but-mitigable impacts associated with air emissions from construction activities. These impacts would be less than significant with the implementation of Mitigation Measure AIR-1 and AIR-2. Operational and odor impacts would be less than significant without mitigation.

Under the Historic Preservation Alternative, reduced construction activities would occur when compared to the proposed project. On-site construction would occur but would be limited to interior renovations and parking garage reconfiguration or expansion. While the project's two significant-but-mitigable impacts may not be entirely avoided, air emissions would be reduced when compared to the proposed project.

Under the proposed project, all new facilities would meet current State building standards and would be LEED Gold certified, and would thus be designed with high-efficiency fixtures and energy conservation features. The Historic Preservation Alternative would not include these beneficial project features.

Under project operations of both the proposed project and the Historic Preservation Alternative, the primary source of long-term criteria air pollutants would be from project-related vehicle trips. Because the Historic Preservation Alternative would involve a reduced building size and reduced building occupancy in comparison to the proposed project, it is expected that this alternative would generate fewer employee vehicle trips than the proposed project. However, the Historic Preservation Alternative would increase the parking supply at the site and renovate the on-site building, which could result in additional visitors occupying the project site when compared to existing conditions. Therefore, overall operational air emissions are expected to be only slightly reduced when compared to the proposed project.

Overall, the Historic Preservation Alternative would result in **reduced** air quality impacts when compared to the proposed project.

5.6.2 Biological Impacts

As described in Section 4.2, *Biological Resources*, construction of the proposed project would result in two significant-but-mitigable impacts associated with tree removal and potential disturbance to nesting birds. These impacts would be less than significant with the implementation of Mitigation Measure BIO-1 and BIO-2.

Under the Historic Preservation Alternative, reduced construction activities would occur when compared to the proposed project. However, expansion of on-site parking facilities under this alternative could require tree removal. Therefore, the Historic Preservation Alternative would not avoid the proposed project's significant-but-mitigable impacts, and impacts would be **similar** when compared to the proposed project.

5.6.3 Cultural and Tribal Cultural Resources

As described in Section 4.3, *Cultural and Tribal Cultural Resources*, the proposed project would result in a significant and unavoidable impact associated with the demolition of the Mountain View Police Services - Fire Administration building, a historical resource. In addition, the proposed project would result in three significant-but-mitigable impacts associated with construction activities for the proposed project that have the potential to adversely affect or disturb unknown subsurface archaeological resources, human remains, and tribal cultural resources. These impacts would be less than significant with the implementation of Mitigation Measures CUL-2, CUL-3, and CUL-4, respectively.

The Historic Preservation Alternative would not involve demolition of the existing Mountain View Police Services - Fire Administration building and would therefore avoid the project's significant and unavoidable impact. However, this alternative would involve construction activities that could unknown subsurface resources. Therefore, it would not avoid the project's significant-but-mitigable impacts to cultural and tribal cultural resource impacts.

Overall, cultural and tribal cultural resource impacts would be **reduced** when compared to the proposed project.

5.6.4 Geology and Soils

As described in Section 4.4, *Geology and Soils*, the proposed project would result in two significant-but-mitigable associated with the exacerbation of existing soil and seismic hazards. These impacts would be less than significant with the implementation of Mitigation Measures GEO-1 and GEO-2.

The Historic Preservation Alternative would involve construction activities that would involve ground disturbance and develop new or expanded parking structures and facilities on the project site. While this alternative would not increase the employee population of the project site, it would increase the parking supply at the site and renovate the on-site building, which could result in additional visitors occupying the project site. Therefore, it could expose additional people to existing hazards when compared to existing conditions.

Therefore, the Historic Preservation Alternative would not avoid the project's significant-but-mitigable geology and soils impacts and impacts would be **similar** when compared to the proposed project.

5.6.5 Greenhouse Gas Emissions

As described in Section 4.5, *Greenhouse Gas Emissions*, the proposed project would result in less-than-significant GHG emissions impacts, and mitigation is not required.

Under the Historic Preservation Alternative, reduced construction activities would occur when compared to the proposed project. On-site construction would occur but would be limited to interior renovations and parking garage reconfiguration or expansion. Therefore, construction phase GHG emissions would be reduced when compared to the proposed project.

As described in Section 5.6.1, *Air Quality*, under the proposed project, all new facilities would meet current State building standards and would be LEED Gold certified, and would thus be designed with high-efficiency fixtures and energy conservation features. The Historic Preservation Alternative would not include these beneficial project features.

As described in Section 5.6.1, *Air Quality*, overall operational vehicle trips are expected to be only slightly reduced when compared to the proposed project. Thus, operational GHG emissions would be slightly reduced when compared to the proposed project.

Overall, neither the proposed project nor the Historic Preservation Alternative would result in significant GHG emissions impacts. Therefore, the Historic Preservation Alternative would result in **similar** impacts when compared to the proposed project.

5.6.6 Hazards and Hazardous Materials

As described in Section 4.6, *Hazards and Hazardous Materials*, the proposed project would result in one significant-but-mitigable impact associated with potential exposure of future construction workers and future site occupants due to the release of hazardous materials originating from off-site land uses. This impact would be less than significant with the implementation of Mitigation Measure HAZ-1.

Under the Historic Preservation Alternative, reduced construction activities would occur when compared to the proposed project. On-site construction would occur but would be limited to interior renovations and parking garage reconfiguration or expansion. Parking garage construction under this alternative is expected to involve subterranean construction, which could expose construction workers to potential soils and groundwater contamination. In addition, while this alternative would not increase the employee population of the project site, it would increase the parking supply at the site and renovate the on-site building, which could result in additional visitors occupying the project site. Therefore, like the proposed project, this alternative would increase the number of site occupants exposed to potential hazards when compared to existing conditions.

Like the proposed project, the Historic Preservation Alternative would result in a significant-but-mitigable impact associated with exacerbating a potential existing hazard; therefore, impacts would be **similar** when compared to the proposed project.

5.6.7 Noise

As described in Section 4.7, *Noise*, the proposed project would result in one significant-but-mitigable impact associated with construction activities. This impact would be less than significant with the implementation of Mitigation Measure NOI-1.

Under the Historic Preservation Alternative, reduced construction activities would occur when compared to the proposed project. On-site construction would occur but would be limited to interior renovations and parking garage reconfiguration or expansion. Therefore, this alternative is expected to reduce, but not entirely avoid, the project's significant-but-mitigable noise impact.

As described in Section 4.7, *Noise*, the proposed project is expected to result in similar overall levels of operational noise when compared to existing conditions. The Historic Preservation Alternative, like the proposed project, would increase the number of site occupants and vehicle trips when compared to existing conditions. Therefore, operational noise is expected to be similar when compared to the proposed project.

Overall, noise impacts would be **similar** when compared to the proposed project.

5.6.8 Transportation

As described in Section 4.8, *Transportation*, the proposed project would result in less-than-significant transportation impacts, and mitigation is not required.

As described in Section 5.6.1, *Air Quality*, overall operational vehicle trips under the Historic Preservation Alternative are expected to be only slightly reduced when compared to the proposed project.

Overall, neither the proposed project nor the Historic Preservation Alternative would result in significant transportation impacts. Therefore, the Historic Preservation Alternative would result in **similar** impacts when compared to the proposed project.

5.7 SUMMARY OF ALTERNATIVES EVALUATION

Table 5-1, *Comparison of Project Alternative Impacts*, compares the impact of each alternative to impacts of the proposed project. The impacts of each alternative are classified as having a reduced (↓), similar or comparable to (=), or greater (↑) level of impact when compared to the proposed project.

Table 5-1 Comparison of Project Alternative Impacts

Environmental Topic	Proposed Project [1]	Alternative A: No Project Alternative	Alternative B: Historic Preservation Alternative
4.1 Air Quality	LTS/M	↓	↓
4.2 Biological Resources	LTS/M	↓	=
4.3 Cultural and Tribal Cultural Resources	SU	↓	↓
4.4 Geology and Soils	LTS/M	↓	=
4.5 Greenhouse Gas Emissions	LTS	=	=
4.6 Hazards and Hazardous Materials	LTS/M	↓	=
4.7 Noise	LTS/M	↓	=
4.8 Transportation	LTS	=	=

Notes:
1. The impacts listed in this column represent the highest significance determination for each respective topic.

LTS Less than Significant	↓ Reduced impact in comparison to the proposed project
LTS/M Less than Significant with Mitigation	= Similar impact in comparison to the proposed project
SU Significant and Unavoidable	↑ Greater impact in comparison to the proposed project

Table 5-2, *Ability to Meet Proposed Project Objectives*, identifies the ability of each of the project alternatives to meet the proposed project's objectives.

Table 5-2 Ability to Meet Proposed Project Objectives

Objective	Proposed Project	Alternative A: No Project Alternative	Alternative B: Historic Preservation Alternative
General Plan Consistency. Provide for the development of the site consistent with City's General Plan.	Yes	Yes	Yes
Enhance Public Safety Infrastructure. Construct a modern, state-of-the-art Public Safety Building that meets the operational needs of the Mountain View Police Department (MVPD) and other public safety personnel.	Yes	No	Partial
Improve Operational Efficiency. Provide upgraded facilities, including offices, an auditorium, sleep quarters, lockers, and fitness areas, to enhance the functionality and efficiency of police and fire department operations.	Yes	No	Partial
Increase Parking Capacity. Develop a three-story parking garage and reconfigure surface parking to accommodate approximately 244 parking spaces, improving access for personnel and visitors.	Yes	No	Yes
Enhance Site Access and Circulation. Improve vehicular and pedestrian access with designated secured and public entry points from Oak Street and Franklin Street while maintaining connectivity to major transportation routes.	Yes	No	No
Preserve Flexibility for Future City Uses. Reserve 0.6 acres of the project site for potential future municipal development to accommodate evolving community needs.	Yes	No	No
Site Reuse. Utilize the site that currently houses the Mountain View Police Services - Fire Administration building at 1000 Villa Street due to its central location and parcel size that allows for the size and mix of facilities envisioned for the proposed project.	Yes	Partial	Partial

5.7.1 Summary of Alternative A: No Project Alternative

As shown in Table 5-1, *Comparison of Project Alternative Impacts*, the No Project Alternative would result in similar impacts related to GHG emissions and transportation. All other impacts (air quality, biological resources, cultural and tribal cultural resources, geology and soils, hazards and hazardous materials, and noise) would be reduced when compared to the proposed project.

As shown in Table 5-2, *Ability to Meet Proposed Project Objectives*, the No Project Alternative would meet the objective to be consistent with the General Plan. It would partially meet the objective to reuse the project site because it would utilize the project site but would not allow for the size and mix of facilities envisioned for the proposed project. The No Project Alternative would not meet any additional project objectives.

5.7.2 Summary of Alternative B: Historic Preservation Alternative

As shown in Table 5-1, *Comparison of Project Alternative Impacts*, the Historic Preservation Alternative would result in reduced impacts related to air quality and cultural and tribal cultural resources. All other impacts (biological resources, geology and soils, GHG emissions, hazards and hazardous materials, noise, and transportation) would be similar when compared to the proposed project.

As shown in Table 5-2, *Ability to Meet Proposed Project Objectives*, the Historic Preservation Alternative would meet or partially meet most of the project objectives because it would be consistent with the General Plan, allow for some on-site enhancements (through interior renovations), increase the project site's parking supply, and be located on the project site. The Historic Preservation Alternative would not provide a state-of-the art building, fully meet operational needs and efficiencies, enhance site access, provide an on-site reserve area for future City use, or allow for the size and mix of facilities envisioned for the proposed project.

5.8 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

In addition to the discussion and comparison of impacts of the proposed project and the alternatives, CEQA Guidelines Section 15126.6 requires that an "environmentally superior" alternative be selected and the reasons for such a selection be disclosed. In general, the environmentally superior alternative is the alternative to the proposed project that would be expected to generate the least number of significant impacts. Identification of the environmentally superior alternative is an informational procedure, and the alternative to the proposed project selected may not be the alternative to the proposed project that best meets the goals or needs of the City of Mountain View. Because CEQA Guidelines Section 15126.6(c) requires an evaluation of a reasonable range of alternatives to the proposed project, the proposed project under consideration cannot be identified as the environmentally superior

alternative. Additionally, in accordance with CEQA Guidelines Section 15126.6(e)(2), if the environmentally superior alternative is the "no project" alternative, the EIR shall also identify an environmentally superior alternative from among the other alternatives.

As shown in Table 5-1, *Comparison of Project Alternative Impacts*, and discussed in Section 5.7, *Summary of Alternative Evaluation*, the No Project Alternative would reduce impacts for nearly all environmental topics (six out of eight) when compared to the proposed project. The next environmentally superior alternative would be the Historic Preservation Alternative, which would reduce impacts for two topic areas.

5. Alternatives to the Proposed Project

This page is intentionally left blank.

6. Other CEQA Considerations

This chapter provides an overview of the impacts of the proposed project based on the analyses presented in Chapters 4 and 5 of this Draft EIR. The topics covered in this chapter include impacts found not to be significant, growth-inducing impacts, and significant irreversible changes to the environment. A more detailed analysis of the effects that the proposed project would have on the environment, and proposed mitigation measures to minimize significant impacts, are provided in Sections 4.1 through 4.8.

6.1 EFFECTS FOUND NOT TO BE SIGNIFICANT

CEQA Guidelines Section 15128 allows environmental issues for which there is no likelihood of a significant impact to be briefly discussed and not analyzed further in the EIR. An Initial Study was prepared for the proposed project (see Appendix A, *Notice of Preparation, Initial Study, and Scoping Comments,* of this Draft EIR). Based on the analysis contained in the Initial Study and the existing conditions on the project site and surrounding area it was determined that development of the proposed project would not result in significant environmental impacts for the following environmental issues:

- Aesthetics
- Agricultural and Forestry Resources
- Energy
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Population and Housing
- Public Services
- Recreation
- Utilities and Service Systems
- Wildfire

In addition, based on the analysis contained in the Initial Study it was determined that development of the proposed project would not result in significant environmental impacts for some of the significance criteria in the following topic areas and, therefore, impacts related to these criteria are not analyzed further in this Draft EIR.

- **Air Quality**
  Would the project conflict with or obstruct implementation of the applicable air quality plan?

6. Other CEQA Considerations

- **Biological Resources**
  - Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?
  - Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?
  - Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?
  - Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

- **Geology and Soils**
  - Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
    - Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map, issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.
    - Strong seismic ground shaking?
    - Landslides?
  - Would the project result in substantial soil erosion or the loss of topsoil?
  - Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?
  - Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?
  - Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Hazards and Hazardous Materials

- Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

- Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?
- Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?
- Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?
- Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

- **Noise**
  For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

- **Transportation**
  - Would the project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?
  - Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?
  - Would the project result in inadequate emergency access?

6.2 SIGNIFICANT UNAVOIDABLE IMPACTS

CEQA Guidelines Section 15126.2(a) requires that "Direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short- and long-term effects." CEQA Guidelines Section 15126.2(c) requires that an EIR describe any significant impacts that cannot be avoided, even with the implementation of feasible mitigation measures. Table 1-1, *Summary of Significant Environmental Impacts and Mitigation Measures*, in Chapter 1, *Executive Summary* of this Draft EIR summarizes the significant impacts, mitigation measures, and levels of significance with and without mitigation.

6. Other CEQA Considerations

Though mitigation measures would reduce the level of impact of the proposed project, the following impact would remain significant and unavoidable:

> **Impact CUL-1:** The proposed project would remove the historical resource on the project site that is eligible for listing in the California Register under Criterion 3 as a significant example of the work of master architect Goodwin Steinberg.

6.3 SIGNIFICANT IRREVERSIBLE CHANGES

Section 15126.2(d) of the CEQA Guidelines requires that an EIR discuss whether "Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely." The discussion shall consider primary and secondary impacts that generally commit future generations to similar uses, irreversible damage from environmental accidents, and irretrievable commitments of resources.

6.3.1 Land Use Changes that Commit Future Generations

As described in Chapter 3, *Project Description*, of this Draft EIR, the proposed project will maintain the existing land use. The proposed project would replace the existing Mountain View Police Services - Fire Administration building with a new Public Safety Building with the same local community-serving use and purpose for the residents of Mountain View. Because the project site is already developed with the same uses, redevelopment under the proposed project would not represent a substantial change in land use.

6.3.2 Irreversible Damage from Environmental Accidents

Potential environmental accidents of concern are those that would have adverse effects on the environment or public health due to the nature or quantity of material released during an accident and the receptors exposed to that release. Demolition and construction activities associated with development of the proposed project would involve some risk of environmental accidents; however, these activities would be monitored by local, State, and federal agencies, and would follow professional industry standards for safety and construction. The land uses proposed by the project would not include any uses or activities that are likely to contribute to or be the cause of a significant environmental accident. As a result, the proposed project would not pose a substantial risk due to environmental accidents.

6.3.3 Large Commitment of Non-Renewable Resources

Consumption of nonrenewable resources includes increased energy consumption, conversion of agricultural lands, and lost access to mining reserves. Redevelopment of the proposed project site would require water and electric service, as well as additional resources for construction.

Construction and ongoing maintenance of the proposed project would irreversibly commit some materials and nonrenewable energy resources. Materials and resources used would include, but are not limited to, nonrenewable and limited resources such as oil, gasoline, sand, gravel, asphalt, and steel. These materials and energy resources would be used for infrastructure development, transportation of people and goods, and utilities to operate the project. During the operational phase of the proposed project (post-construction), all electric energy sources would be used for lighting, heating, and cooling of residences and retail space, and oil and gasoline would be used for the transportation of people to and from the project site.

The proposed project would be required to comply with and implement several measures that would offset or reduce the need for nonrenewable resources. For example, the proposed project is required to comply with all applicable building and design requirements, including Title 24 relating to energy conservation. With compliance with Part 11 of Title 24, also known as CALGreen, the State's Green Building Standards Code, the proposed project is required to reduce water consumption by 20 percent, divert 50 percent of construction waste from landfills, and install low pollutant-emitting materials. The proposed project would also implement environmentally sustainable standards for demolition, construction, and operation. The proposed project would be Leadership in Energy and Environmental Design (LEED) Gold certified, and would thus be designed with high-efficiency fixtures and energy conservation features. Further, the City does not contain any agricultural land or a mining reserve; therefore, there would be no impact with regards to those resources (see Section 6.1, *Impacts Found Not to Be Significant*, above).

Although the construction and operation of the proposed redevelopment project would involve the use of nonrenewable resources, through the inclusion of energy-conserving project features and compliance with applicable standards and regulations, the proposed project would not represent a large commitment of nonrenewable resources.

6.4 GROWTH-INDUCING EFFECTS

CEQA Guidelines Section 15126.2(e) requires that an EIR discuss the ways in which a proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Typical growth inducing factors might include the extension of urban services or transportation infrastructure to a previously unserved or under-served area, or the removal of major barriers to development. This section evaluates the proposed project's potential to induce growth. Not all aspects of growth inducement are negative; rather, negative impacts associated with growth inducement occur only where the growth associated with the proposed project would cause adverse environmental impacts.

Growth-inducing impacts can be either direct or indirect. Direct growth-inducing impacts are generally associated with providing urban services to an undeveloped area. Indirect, or

6. Other CEQA Considerations

secondary growth-inducing impacts, consist of growth induced in the region by additional demands for housing, goods, and services associated with the population increase caused by, or attracted to, a new project.

As described in Chapter 3, *Project Description*, of this Draft EIR, the proposed project would replace the existing Mountain View Police Services - Fire Administration building with a new Public Safety Building with the same local community-serving use and purpose for the residents of Mountain View. Accordingly, the construction and operation would not directly or indirectly induce growth.

APPENDIX A:
Notice of Preparation, Initial Study, and Scoping Comments

This page is intentionally left blank.

CEQA: California Environmental Quality Act

NOTICE OF PREPARATION

To: State Agencies
Responsible Agencies
Interested Parties

From: City of Mountain View
500 Castro St
Mountain View, CA 94041

Date: December 4, 2024

Subject: **Notice of Preparation of a Draft Environmental Impact Report**

City of Mountain View will be the Lead Agency and will prepare an environmental impact report for the project identified below. We need to know the views of your agency as to the scope and content of the environmental information which is germane to your agency's statutory responsibilities in connection with the proposed project. Your agency will need to use the EIR prepared by our agency when considering your permit or other approval for the project.

Project Location: The project site is at 1000 Villa Street in the City of Mountain View in Santa Clara County. The 4.12-acre project site is bounded by Central Expressway and the Caltrain Railroad to the north, Franklin Street to the east, Villa Street to the south, and South Shoreline Boulevard to the west. The site is assigned Assessor's Parcel Number 158-15-027. Regional access to the project site is from SR-82, SR-85, and US 101.

Project Description: The proposed project would remove the existing Mountain View Police Department (MVPD) building and associated parking lot and K-9 training area, and construct a new Public Safety Building, parking garage, indoor shooting range, surface parking, and K-9 training area at the same location. In the eastern corner of the project site, a 0.6-acre area would remain undeveloped for future potential uses by the City. The current MVPD building is 44,914 square feet and the proposed Public Safety Building would be approximately 75,000 gross square feet, three-stories high, and a floor area ratio (FAR) of 0.49. The proposed Public Safety Building would have a variety of offices and associated service rooms for police and fire activities. Some of the designated areas include an auditorium, offices, sleep quarters, lockers, and a fitness room. As part of the proposed project, a three-story parking garage with approximately 168 parking spaces would be built on the site. At the top of the parking garage, an indoor shooting range would be installed. The K-9 training area would be reinstalled in the northern corner of the project site. In addition, the proposed project would include improved landscaping and would have four vehicular access points.

Initial Study: The initial study prepared for this project is available for review online at www.mountainview.gov and in person at Public Works Counter, 500 Castro Street, Mountain View, CA 94041.

Due to the time limits mandated by State law, your response must be sent at the earliest possible date but not later than 30 days after receipt of this notice. Comments on the NOP are due no later than the close of the 30-day NOP review period at **5:00 p.m. on January 15, 2024.**

Please send your response to Naveen Govind, Senior Project Manager

at the address shown above or email to Naveen.Govind@mountainview.gov with “Mountain View Public Safety Building EIR” as the subject.

1. Introduction

1.1 PURPOSE OF CEQA AND THE INITIAL STUDY

CEQA (California Environmental Quality Act; Public Resources Code Section 21000 et seq.) requires that before a lead agency[1] makes a decision to approve a project that could have one or more adverse effects on the physical environment, the agency must inform itself about and consider the project's potential environmental impacts, inform the public about the project's potential environmental impacts and provide them an opportunity to comment on the environmental issues, and take feasible measures to avoid or reduce potential harm to the physical environment.

The City of Mountain View (City)—in its capacity as lead agency pursuant to CEQA Guidelines Section 15050—is responsible for preparing environmental documentation in accordance with CEQA to determine if approval of the discretionary actions and subsequent development associated with the proposed project would have a significant impact on the environment. As part of the project's environmental review, the City authorized preparation of this Initial Study in accordance with the provisions of CEQA Guidelines Section 15063. Pursuant to Section 15063, purposes of an Initial Study are to:

- Provide the lead agency information to use as the basis for deciding whether to prepare an environmental impact report (EIR) or negative declaration.
- Enable an applicant or lead agency to modify a project, mitigating adverse impacts before an EIR is prepared, thereby enabling the project to qualify for a negative declaration.
- Assist in the preparation of an EIR if one is required.
- Facilitate environmental assessment early in the design of a project.
- Provide documentation of the factual basis for the finding in a negative declaration that a project will not have a significant effect on the environment.
- Eliminate unnecessary EIRs.
- Determine whether a previously prepared EIR could be used with the project.

As further defined by Section 15063, an Initial Study is prepared to provide the City with information to use as the basis for determining whether an environmental impact report (EIR), negative declaration, or

1 Pursuant to Public Resources Code Section 21067, lead agency refers to the public agency that has the principal responsibility for carrying out or approving a project that may have a significant effect on the environment.

mitigated negative declaration (MND) would be appropriate for providing the necessary environmental documentation and clearance for the proposed project.

1.2 PROJECT LOCATION

The project site is at 1000 Villa Street in the City of Mountain View in Santa Clara County. To the north of Mountain View is San Francisco Bay, to the east is Sunnyvale, to the south is Cupertino, and to the west is Palo Alto and Los Altos (see Figure 1, *Regional and Local Vicinity Map*). Mountain View is approximately 40 miles southeast of San Francisco and approximately 14 miles west of San José.

As shown on Figure 1, the 4.12-acre project site is bounded by Central Expressway and the Caltrain Railroad to the north, Franklin Street to the east, Villa Street to the south, and South Shoreline Boulevard to the west. The site is assigned Assessor's Parcel Number 158-15-027. Regional access to the project site is from State Route 82 (SR-82), SR-85, and US 101.

1.3 ENVIRONMENTAL SETTING

1.3.1 Existing Land Use

The project site is at the existing Mountain View Police Department, and the proposed project encompasses 4.12 acres. The project site is currently zoned Public Facility (PF) with a corresponding General Plan land use designation of Parks, Schools and City Facilities.

As shown on Figure 2, *Aerial Photograph*, the project site is currently occupied by the Mountain View Police Department building, a 42-stall public parking lot, a 110-stall restricted-access parking lot/garage, a pump station, and a K-9 training area.

1.3.2 Surrounding Land Use

As shown on Figure 2, *Aerial Photograph*, the project site is mainly surrounded by single-family and multi-family residential, commercial and institutional land uses. According to the land use designation map, low density residential neighborhoods are to the north, downtown mixed use is to the east, low density residential neighborhoods are to the south, and medium-density residential and office uses are to the west.[2] The project site is surrounded by one and two-story residential buildings to the north across the Caltrain railroad tracks and then Central Expressway, two four-story apartment buildings and two-story offices to the east, one- and two-story residential buildings to the south, and one- and two-story residential buildings directly west with the Kahn Lab School located west across South Shoreline Boulevard. The Khan Lab School is approximately 0.15 miles west of the project site. The Mountain View Fire Department Station No 1 is 0.1 miles southwest of the project site along Oak Street.

1.4 PROJECT DESCRIPTION

1.4.1 Proposed Project

The City of Mountain View is the lead agency for the proposed project to build a new Public Safety Building. The proposed project would remove the existing Mountain View Police Department (MVPD) building and associated parking lot and K-9 training area, and construct a new Public Safety Building, parking garage, indoor shooting range, surface parking, and K-9 training area at the same location. In the eastern corner of the project site, 0.6-acre would remain undeveloped for future potential uses by the City (see Figure 3, Proposed Site Plan).

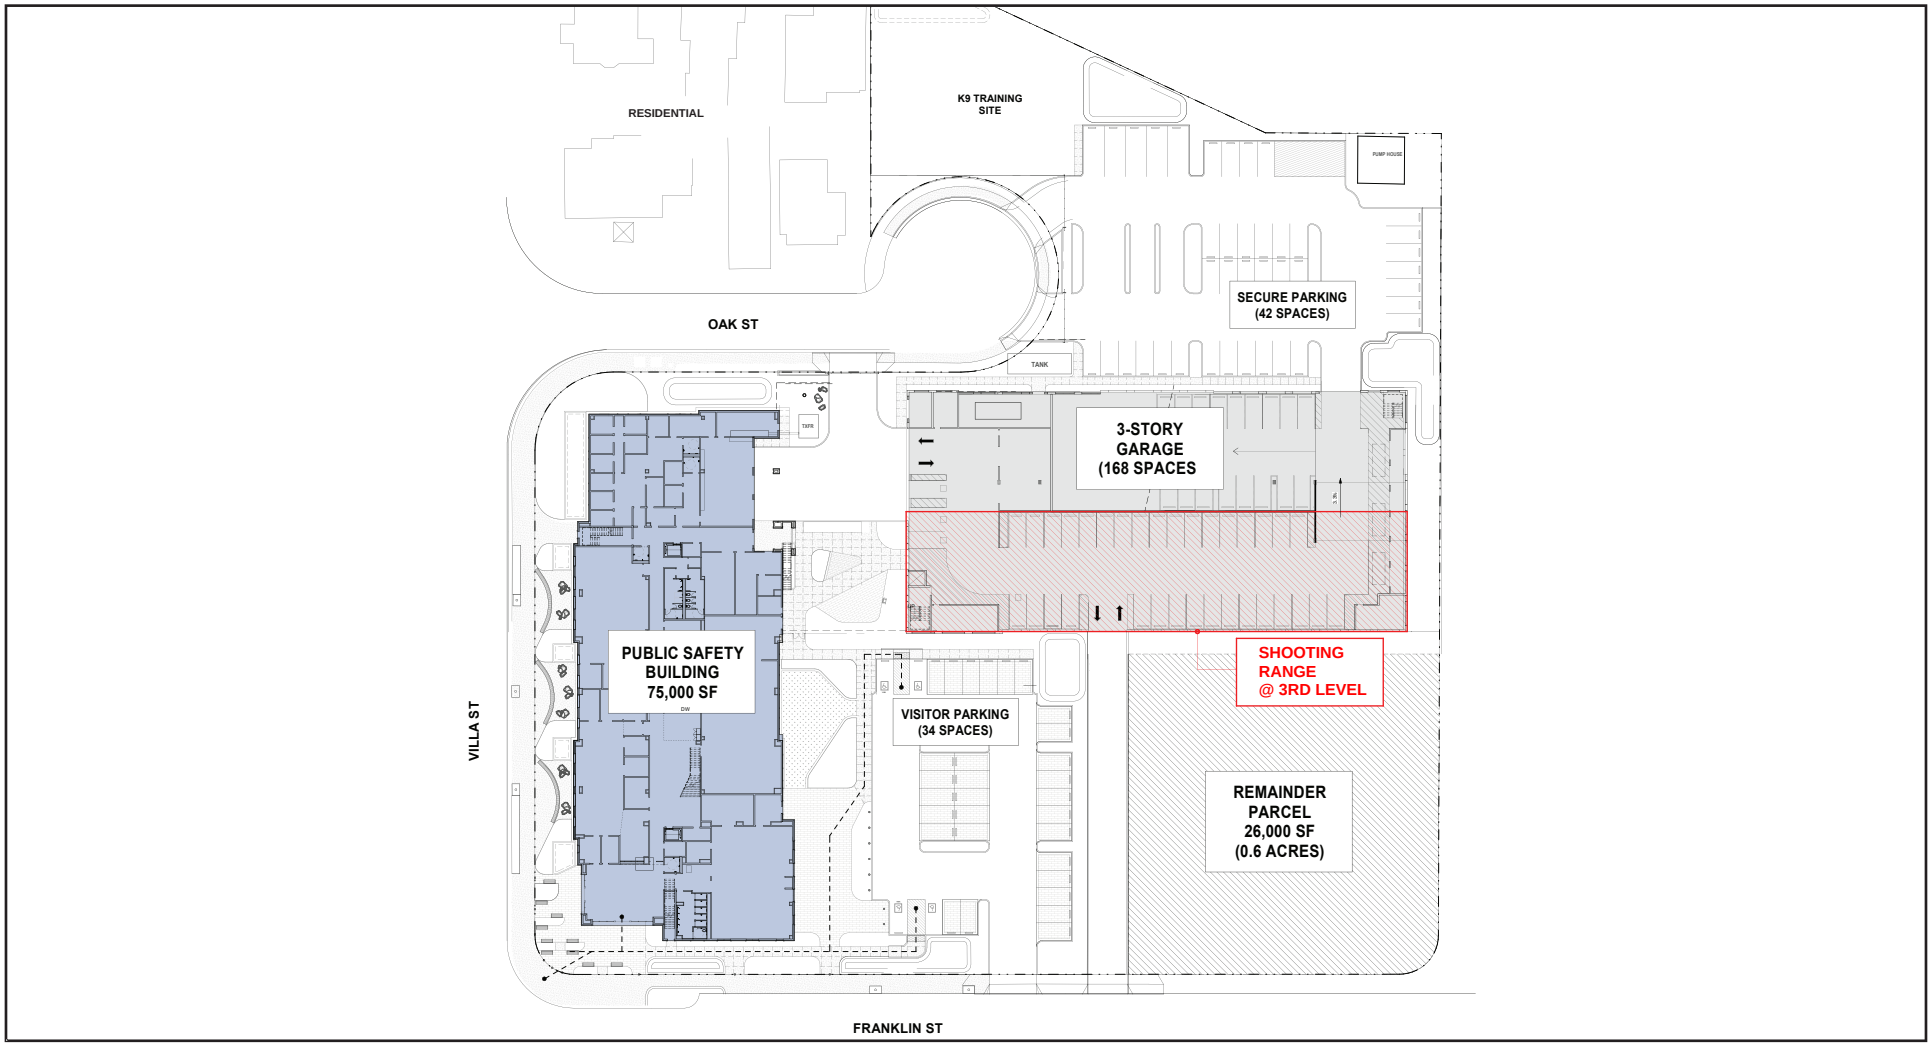
1.4.1.1 PROPOSED PUBLIC SAFETY BUILDING

The current MVPD building is 44,914 square feet, and the proposed Public Safety Building would be approximately 75,000 gross square feet, three-stories high and a floor are ratio (FAR) of 0.49. The proposed Public Safety Building would have a variety of offices and associated service rooms for police and fire activities. Some of the designated areas include an auditorium, offices, sleep quarters, lockers, and a fitness room. All new facilities would meet current state building standards and would be LEED Gold certified, as required in the Mountain View Municipal Code Section 8.20.12. Once built, the proposed Public Safety Building would have an immediate personnel increase of thirteen (13) environmental health staff who would be relocated to the proposed project. At maximum capacity, the proposed public safety building could contain up to 242 personnel, however this number is not the staffing level that is proposed as part of the project.

1.4.1.2 VEHICULAR PARKING

The proposed project includes a three-story parking garage to include approximately 168 parking spaces. At the top of the parking garage, an indoor shooting range would be installed (see Section 1.4.1.4, *Indoor Shooting Range*). The existing, 152-spaces surface parking lots would be reconfigured/relocated to other surface parking spaces for City personnel and a surface lot for future visitors to the Public Safety Building. Currently, the MVPD building site accommodates 152 parking spaces in total, including public/visitor parking and restricted-access employee parking areas. With the addition of the parking garage and surface parking lot reconfigurations, the Public Safety Building would accommodate approximately 244 parking spaces, including the public/visitor parking lot. Out of the 244 total parking spaces across the site, 210 parking spaces would be secured and 34 spaces would be open to the public. Of the total parking spaces, 168 would be garage parking and the remaining 76 parking spaces would be dedicated to surface parking. See Figure 3, *Proposed Site Plan*, for the proposed location and allocation of parking on the project site.

Figure 3 - Proposed Site Plan



Project Boundary

0 45
Scale (Feet)

Source: SVA Architects 2024.

1.4.1.3 SITE ACCESS AND CIRCULATION

The proposed project would have two vehicular access points; one would occur along Oak Street and be secured while the other access point would be along Franklin Street, and would be open to the public.

Major arterials that can be used to access the project site are Highway 101 and the Central Expressway to the north, State Route 85 to the east, and West El Camino Real and Interstate 280 to the south. Additionally, the site can be accessed via the Caltrain railroad, which is directly north of the site with a station located 0.2 miles east.

1.4.1.4 K-9 TRAINING AREA

The K-9 training area would be reinstalled in the northern corner of the project site. The K-9 training area would be located in the same location as the existing K-9 training area and would be similar in size. The K-9 training area would be designed and utilized in a very similar fashion to its existing use, and no large upgrades would occur.

1.4.1.5 INDOOR SHOOTING RANGE

The proposed project includes an indoor shooting range on the top level of the parking garage. The shooting range would be approximately 12,215 square feet and would follow industry standards and regulations to address noise, reverberation, and echoes.

1.4.1.6 LANDSCAPE

The proposed project would include improved landscaping around the project site. Site improvements would include ornamental landscaping and benches, outdoor event space, shade structures, hardscape areas, and utility upgrades. During development of the project site several heritage trees would need to be removed, these include Coast redwood and Raywood ash trees. This is discussed in more detail in Section 3.4, *Biological Resources*, and potential impacts will be analyzed in the EIR.

1.4.2 Project Phasing

The project is preliminarily scheduled to start in September 2025 and be completed in Spring 2028. The project would be completed in three development phases. In the first phase the site would be prepared and selective demolition would occur, in the second phase the Public Safety Building would be constructed, and the third phase of development would remove the existing MVPD building and install the parking garage and shooting range.

Construction activities would include building and asphalt demolition and excavation, site preparation and rough grading, building construction, paving, and architectural coating. Construction would take place from 7:00 am to 4:00 pm, Monday through Friday, as allowed by the Mountain View Municipal Code, Section 8.70, Construction Noise. The active construction and staging areas would be on the project site.

1.5 CITY ACTION REQUESTED

A discretionary action is an action taken by a government agency (for the project, the government agency is the City of Mountain View) that calls for an exercise of judgment in deciding whether to approve a project. The City is the lead agency under CEQA and has the principal approval authority over the project. The discretionary actions and approvals required for project implementation are (1) certification of the environmental document and (2) approval of the proposed project.

- Approval and issuance of grading and building permits

2. Environmental Checklist

2.1 PROJECT INFORMATION

1. **Project Title:** Mountain View Public Safety Building

2. **Lead Agency:**
City of Mountain View
500 Castro Street
Mountain View, CA 94041

3. **Contact Person and Phone Number:**
David O. Printy
650-903-6162

4. **Project Location:** 1000 Villa St, Mountain View, CA 94041

5. **Project Sponsor's Name and Address:**
Nathan Herrero, Principal
SVA Architects, Inc.
2030 Franklin St, Suite 210
Oakland, California 94612

6. **General Plan Designation:** Parks, Schools and City Facilities

7. **Zoning:** Public Facility (PF)

8. **Description of Project:**
The proposed project involves the removal of the existing Mountain View Police Department (MVPD) building, associated parking lot, and K-9 training area and the installation of a new Public Safety Building, parking garage, shooting range, surface parking, and K-9 training area. The current MVPD building is 44,914 square feet and the proposed Public Safety Building would be approximately 75,000 gross square feet. The proposed Public Safety Building would relocate 13 to the proposed project environmental health staff and would provide an auditorium, offices, sleep quarters, lockers, and a fitness room. A 0.6-acre portion of the project site in the eastern corner would remain undeveloped for future potential uses by the City.

9. **Surrounding Land Uses and Setting:**
The project site is mainly surrounded by residential, mixed-use, and office space. According to the land use designation map, low and medium density residential neighborhoods are to the north, downtown mixed use is to the east, low density residential neighborhoods are to the south, and office uses are to the west. To the north of the project is the Caltrain railroad and the Central Expressway; to the west of the project site is the Khan Lab School. The Mountain View Fire Department Station No 1 is 0.1 miles southwest of the project site along Oak Street.

10. **Other Public Agencies Whose Approval Is Required (e.g., permits, financing approval, or participating agreement):**
Approval and issuance of grading and building permits

11. **Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?**

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21080.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.94 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

The proposed project would comply with tribal consultation requirements pursuant to Assembly Bill 52 (AB 52).

2.2 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact," as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture / Forestry Resources	☒ Air Quality
☒ Biological Resources	☒ Cultural Resources	☐ Energy
☒ Geology/Soils	☒ Greenhouse Gas Emissions	☒ Hazards and Hazardous Materials
☐ Hydrology/Water Quality	☐ Land Use / Planning	☐ Mineral Resources
☒ Noise	☐ Population / Housing	☐ Public Services
☐ Recreation	☒ Transportation	☒ Tribal Cultural Resources
☐ Utilities / Service Systems	☐ Wildfire	☐ Mandatory Findings of Significance

2.3 DETERMINATION (TO BE COMPLETED BY LEAD AGENCY)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature	*Date*

2.4 EVALUATION OF ENVIRONMENTAL IMPACTS

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors, as well as general standards (e.g., the project would not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4. "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.

5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

    a) **Earlier Analyses Used.** Identify and state where they are available for review.

    b) I**mpacts Adequately Addressed.** Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

    c) **Mitigation Measures.** For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or

outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9. The explanation of each issue should identify:

    a) the significance criteria or threshold, if any, used to evaluate each question; and
    b) the mitigation measure identified, if any, to reduce the impact to less than significance.

2. Environmental Checklist

This page was intentionally left blank.

3. Environmental Analysis

Section 2.4 provided a checklist of environmental impacts. This chapter provides an evaluation of the impact categories and questions contained in the checklist and identifies mitigation measures, if applicable.

3.1 AESTHETICS

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
I. AESTHETICS. Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?			X	
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?				X
c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?				X
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			X	

Except as provided in Public Resources Code Section 21099, would the project:

a) Have a substantial adverse effect on a scenic vista?

Less Than Significant Impact. The City of Mountain View offers scenic views of the San Francisco Bay to the north and the Santa Cruz mountains to the south and west. Views of other natural features such as the Diablo Mountain Range to the southeast, Mission Peak to the east, San Francisco Bay to the north, and Stevens Creek in the eastern portion of the City are available from various locations within Mountain View.[3] Views of the San Francisco Bay are generally only available from Shoreline Park in the North

[3] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 581.

3. Environmental Analysis

Bayshore Area.[4] While there is a officially designated state scenic highway in Santa Clara County, State Route 9, this highway is not located or easily visible within Mountain View.

The General Plan has goals and policies in place in the Land Use and Design (LUD) Element that address community character and context-sensitive development. Goal LUD 10 enforces high-quality, sustainable and healthful building design and development, and policies such as LUD 10.1 encourage the use of high-quality and sustainable design and materials.[5] Furthermore, the City has established a development review process in the Mountain View Municipal Code, Section 36.44.45. This review process ensures that development fits into the visual fabric of the city and applies to all new construction and modifications to building exteriors or development sites.[6]

The project site is in a developed area, and views within the project site vicinity are largely constrained by existing development (generally ranging between one and two stories), landscaping, and vegetation. Existing buildings on-site range between one and three stories. Intermittent and partial views of the Santa Cruz Mountains can be seen in the distance looking south along a public right-of-way near the project site (along Franklin Street) and potentially from the project site. No significant or unobstructed views of the Santa Curz or Diablo Mountain Range mountains exist in the vicinity of the project site.

Development of the proposed project would construct a new Public Safety Building, parking garage, shooting range, surface parking, K-9 training area, and associated site improvements. The building would be three stories tall, and development of the project site would be similar to and consistent with the height, scale, and massing of surrounding developments. While construction of a new, three-story building on-site may further constrain views of the Santa Cruz Mountains to the south along rights-of-way near the project, as discussed above, no significant or unobstructed viewsheds of the hillsides exist in the vicinity of the project site, and development of the proposed project would not hinder significant views.

Since the proposed project would be similar to the existing developments in the vicinity of the project site and would not substantially create an adverse effect on scenic vistas, impacts would be less than significant.

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. The California State Scenic Roadways Program, established in 1963 by the state legislature, identifies key roadways in California that contribute to the state's scenic resources by providing viewsheds with aesthetic value. The program establishes the state's responsibility for the protection and enhancement of California's natural scenic beauty through regulations pertaining to scenic roadways and

[4] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 581.
[5] City of Mountain View, 2012, Mountain View 2030 General Plan, 53
[6] Mountain View Municipal Code, Section 36.44.45, Development Review Process.

their function. There are no officially designated State Scenic Highways in Mountain View, and no portions of Mountain View encompass the viewshed of a State Scenic Highway.[7] Therefore, no scenic resources along a state scenic highway would be impacted as part of the proposed project, and no impacts relating to scenic highways would occur upon implementation of the proposed project.

c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

No impact. For an incorporated city, "urbanized area" means a city that has a population of at least 100,000 persons, either by itself or in combination with two contiguous incorporated cities. The City of Mountain View has a population of approximately 81,059 persons and in combination with the adjacent cities of Los Altos, Palo Alto and Sunnyvale [8] Therefore, the project site is in an urbanized area as defined by CEQA Guidelines 15191(m)(1).

While there are no large parks or public views area around the project site, the proposed project is near a gateway area leading into downtown. The LUD Element contains Policy 8.1, which pertains to the city's gateways and emphasizes that city gateways should create a distinct and positive impression. In the 2012 General Plan, this area was categorized as part of the Central Planning Area, and some of the key policy direction for this area included enhancing the small-town character and respecting the scale of surrounding lower-density residential neighborhoods.[9]

Currently the design of the proposed project has not been finalized, but the options being considered draw from studying neighboring buildings throughout downtown Mountain View so the proposed project complements existing buildings. The proposed project would be approximately three-stories in height would taller than the adjacent one- and two-story residential buildings to the south and west, and provides some transitional scall between the four-story buildings to the east in the downtown area. The Floor Area Ratio (FAR) of the proposed project is 0.49, while in the surrounding area the FAR ranges from a maximum of 2.75 in the east, 0.5 in the south, and 2.3 in the west of the project site.[10, 11, 12]

[7] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 587.

[8] US Census Data, 2022, "Quick Facts, Mountain View, city California" https://www.census.gov/quickfacts/mountainviewcitycalifornia.

[10] City of Mountain View, 2022, Downtown Precise Plan.

[11] City of Mountain View, Code of Ordinances, Single-Family (R1) Residential District, https://library.municode.com/ca/mountain_view/codes/code_of_ordinances?nodeId=PTIITHCO_CH36ZO_ARTIVREZO_DIV3SIMIR1ZODIST.

[12] City of Mountain View, Code of Ordinances, Multiple-Family (R3) Residential District, https://library.municode.com/ca/mountain_view/codes/code_of_ordinances?nodeId=PTIITHCO_CH36ZO_ARTIVREZO_DIV5MUMIR3ZODIST.

3. Environmental Analysis

Due to the factors described above, the proposed project would respect the scale and density of the surrounding area and would be designed to be consistent with the surrounding character. Consistent with these policies, the proposed project would not conflict with the applicable zoning and other regulations governing scenic quality in a nonurbanized area, therefore there would be no impact.

d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?

Less Than Significant Impact. Nighttime illumination and glare impacts are the effects of a development's exterior lighting upon adjoining uses and areas. Light reflecting off passing cars and large expanses of glass or other reflective surfaces can also generate glare. Excessive light and/or glare can impair vision, cause annoyance, affect sleep patterns, and create safety hazards for drivers. Daytime glare is caused by sunlight reflecting off reflective surfaces such as parked cars and cars traveling on adjacent roadways, light-colored building material, and windows.

Existing sources of light on-site include typical uses associated with an office building—security/building lighting, parking lot lights, and light emanating from windows. Existing sources of glare on-site include windows on the existing buildings on-site, parked cars, and cars traveling along adjacent roadways. Existing sources of light in the surrounding community include vehicle headlights, streetlights, security lights, and residential lighting (both exterior lighting and light emanating from windows). Existing sources of daytime glare in the surrounding community include vehicles parking and traveling on existing roadways, light-colored building material, and windows.

The proposed project would replace the existing building and would construct a new Public Safety Building that would be three stories tall, which would introduce new sources of light and glare. However, the proposed project would be required to comply with the Mountain View Municipal Code Section 8.252, *Nonresidential Building Security*,[13,] In addition, the proposed project would need to comply with Mountain View's General Plan Policy 9.6, *Light and Glare*, which seeks to minimize light and glare from new development.

Following these regulations would reduce the light intensity level on the project site and therefore development under the proposed project would not create new sources of substantial light or glare. The light and glare from the proposed project would be less than significant.

[13] City of Mountain View, Municipal Code SEC. 8.252. - Nonresidential building security, https://library.municode.com/ca/mountain_view/codes/code_of_ordinances?nodeId=PTIITHCO_CH8BU_ARTXIBUSE_DIV3NOBUSE_S8.252NOBUSE, accessed on March 13, 2024.

3.2 AGRICULTURE AND FORESTRY RESOURCES

Issues		Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
II. AGRICULTURE AND FORESTRY RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:					
a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				**X**
b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?				**X**
c)	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?				**X**
d)	Result in the loss of forest land or conversion of forest land to non-forest use?				**X**
e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				**X**

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. The project site is mapped as "Urban and Built-Up Land" on the California Important Farmland Finder.[14] Therefore, the project site does not include Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. The project site is currently developed with the existing Mountain View Police Department Building and does not contain any agricultural uses. Development of the proposed project would not convert mapped farmland to a nonagricultural use; therefore, no impact would occur.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. The project site is zoned Public Facility (PF). The project site is largely developed and does not contain any agricultural uses or Williamson Act contracts. Zoning is not changing on the project site; therefore, the proposed project would not conflict with an existing zone for agricultural use or conflict with a Williamson Act contract. No impact would occur, and no mitigation measures are required.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

No Impact. Forest land is defined as land that can support 10 percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits.[15] Timberland is defined as land which is available for and capable of growing a crop of trees of any commercial species used to produce lumber and other forest products, including Christmas trees.[16]

The project site is currently developed and does not contain any forest land or timberland production. The project site is not zoned for timberland production and would not conflict with existing zoning or cause the rezoning of forest land or timberland. As such, no impact would occur.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. The project site is in an urbanized area within the City of Mountain View. The project site is currently developed with a building and parking lot. Development of the proposed project would not result in the loss of forest land or the conversion of forest land to nonforest use, and no impact would occur.

[14] California Department of Conservation, "California Important Farmland Finder", accessed June 29, 2023, https://maps.conservation.ca.gov/dlrp/ciff/.
[15] California Public Resources Code § 12220(g).
[16] California Public Resources Code § 4526.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to nonagricultural use or conversion of forest land to nonforest use?

No Impact. One area of Mountain View is considered Unique Farmland and it is located at 247 North Whisman Road, which is approximately 1.1 miles east of the project site. The project site and surrounding area are identified as Urban and Built-Up land.[17] Development of the proposed project would remove the existing police building and build a Public Safety Building, parking garage, shooting range, surface parking, and K-9 training area at the same location. These activities would not conflict with the existing farmland in Mountain View; therefore, the proposed project would not involve changes to the existing environment that could result in the conversion of Farmland or forest land to nonagricultural or nonforest uses, respectively. No impact would occur.

3.3 AIR QUALITY

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?			X	
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	X			
c) Expose sensitive receptors to substantial pollutant concentrations?	X			
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	X			

The Air Quality section addresses the impacts of the proposed project on ambient air quality and the exposure of people, especially sensitive individuals, to unhealthful pollutant concentrations.

The primary air pollutants of concern for which ambient air quality standards (AAQS) have been established are ozone (O3), carbon monoxide (CO), coarse inhalable particulate matter (PM10), fine inhalable particulate matter (PM2.5), sulfur dioxide (SO2), nitrogen dioxide (NO2), and lead (Pb). Areas are classified under the federal and California Clean Air Act as either in attainment or nonattainment for each criteria pollutant based on whether the AAQS have been achieved. The San Francisco Bay Area Air Basin (SFBAAB), which is managed by the Bay Area Air Quality Management District (BAAQMD or Air

[17] California Department of Conservation, "California Important Farmland Finder", accessed June 29, 2023, https://maps.conservation.ca.gov/dlrp/ciff/.

3. Environmental Analysis

District), is nonattainment area for California and National O3, California and National PM2.5, and California PM10 AAQS.

Furthermore, BAAQMD has identified thresholds of significance for criteria pollutant emissions and criteria air pollutant precursors, including ROG, NOX, PM10, and PM2.5. Development projects below the regional significance thresholds are not expected to generate sufficient criteria pollutant emissions to violate any air quality standard or contribute substantially to an existing or projected air quality violation. Where available, the significance criteria established by BAAQMD may be relied upon to make the following determinations. Would the project:

a) Conflict with or obstruct implementation of the applicable air quality plan?

Less Than Significant Impact. BAAQMD is directly responsible for reducing emissions from area, stationary, and mobile sources in the SFBAAB to achieve National and California AAQS. In April of 2023, BAAQMD updated their CEQA Air Quality Guidelines, which updated the best practices for using performance-based standards requiring guidance on evaluating the climate impacts of land use projects and plans. BAAQMD's most current air quality plan is the 2017 Clean Air Plan. In April of 2017 BAAQMD adopted the 2017 Clean Air Plan, which is a regional and multiagency effort to reduce air pollution in the SFBAAB. Regional growth projections are used by BAAQMD to forecast future emission levels in the SFBAAB. For the Bay Area, these regional growth projections are provided by the Association of Bay Area Governments (ABAG) and transportation projections are provided by the Metropolitan Transportation Commission (MTC) and are partially based on land use designations in city/county general plans. Typically, only large, regionally significant projects have the potential to affect regional growth projections. The proposed project would involve the removal an existing MVPD building and development of a new building, and would result in an increase in employment, from 169 personnel with a projection of 198 personnel in 2030. Under CEQA Guidelines Section 15206 (2)(C), the proposed project would not be considered to cause potential significant impacts as it would fall below the threshold of 1,000 employees in the building. The proposed project is not considered a regionally significant project under CEQA Guidelines Section 15206 that would affect regional vehicle miles traveled or VMT and warrant intergovernmental review by ABAG and MTC.

Based on the scope and nature of the project in that it would increase employment to an additional 29 personnel, the proposed project would not exceed the level of employment projected in City or regional planning efforts (Plan Bay Area) through 2040, and it would not have the potential to substantially affect housing, employment, and population projections within the region, which is the basis of the 2017 Clean Air Plan projections. Therefore, the proposed project would not conflict with or obstruct implementation of the 2017 Clean Air Plan and impacts would be considered less than significant.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard?

Potentially Significant Impact. The SFBAAB is designated nonattainment for ozone (O_3) and fine particulate matter ($PM_{2.5}$) under the California AAQS, nonattainment for particulate matter (PM_{10}) under the California AAQS, and unclassified/attainment for lead (Pb) under the National AAQS.[18, 19] Project-related construction or operational phases of the proposed project have the potential to exceed the BAAQMD's regional significance thresholds and cumulatively contribute to the nonattainment designations of the SFBAAB. Any project that produces a significant project-level regional air quality impact in a nonattainment area adds to the cumulative impact. Air quality impacts of the proposed project will be examined further in the EIR.

c) Expose sensitive receptors to substantial pollutant concentrations?

Potentially Significant Impact. Air pollutant emissions associated with the proposed project would occur over the short term from construction activities, and over the long term from project-generated vehicle trips and stationary sources. During construction activities, off-road equipment exhaust and fugitive dust have the potential to elevate concentrations of air pollutants at on- and off-site sensitive receptors. Air pollutant emissions generated by the proposed project would be evaluated against BAAQMD's localized significance thresholds. During operation, on-road emissions from vehicles traveling to and from the project site have the potential to generate elevated concentrations of carbon monoxide (CO) at congested intersections. Localized impacts from project-related construction and operational activities will be examined further in the EIR.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Potentially Significant Impact. Air pollutant emissions would occur over the short term for site preparation and construction activities, and over the long term associated with project-related vehicle trips generated during operation. The EIR will evaluate the increase in air pollutant emissions generated by construction and operation of the proposed project against BAAQMD's regional significance thresholds. Mitigation measures will be recommended, if applicable, to minimize the proposed project's contribution to air pollutant emissions in the SFBAAB.

[18] California Air Resources Board, 2022, "Maps of State Area Designations", https://ww2.arb.ca.gov/resources/documents/maps-state-and-federal-area-designations.
[19] California Air Resources Board, 2022, "Maps of Federal Area Designations", https://ww2.arb.ca.gov/resources/documents/maps-state-and-federal-area-designations.

3.4 BIOLOGICAL RESOURCES

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	**X**			
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?				**X**
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				**X**
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?				**X**
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	**X**			
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				**X**

Would the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Potentially Significant Impact. The project site is the location of the existing MVPD building and is currently developed with buildings and paved surfaces. According to "Tree Data Report" by Woodreeve Consulting, there are a number of heritage trees on the project site that could support sensitive species or their habitats. Potential impacts will be analyzed in the EIR.[20]

[20] Unites States Fish and Wildlife Service, "Critical Habitat for Threatened & Endangered Species," accessed October 23, 2023, https://fws.maps.arcgis.com/home/webmap/viewer.html?webmap=9d8de5e265ad4fe09893cf75b8dbfb77.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

No Impact. The proposed project would be developed on the site of an existing building and associated parking lot. There are no wetlands or critical habitat that exist onsite.[21,22] Therefore, the proposed project would not result in a substantial adverse effect on riparian habitat or other sensitive natural community, and no impact would occur.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. As discussed under Section 3.4(b), the project site is currently developed and no wetlands exist on-site or in the vicinity of the project site.[23] Therefore, the proposed project would not have a substantial adverse effect on protected wetlands, and no impact would occur.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

No Impact. Within Mountain View, the primary movement corridors and nursery sites are Permanente and Stevens Creeks.[24] The project site is 0.68 miles west of Stevens Creek and 0.59 miles east of Permanente Creek. Implementation of the proposed project would not affect either creek. Therefore, the proposed project would not have a substantial adverse effect on migratory wildlife corridors or nursery sites, and no impact would occur.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Potentially Significant Impact. Construction of the proposed project could conflict with local policies and ordinances that protect biological resources, such as the Mountain View Tree Ordinance and the Heritage Tree Program. This issue will be analyzed in the EIR.

---

[22] Unites States Fish and Wildlife Service, "Critical Habitat for Threatened & Endangered Species," https://fws.maps.arcgis.com/home/webmap/viewer.html?webmap=9d8de5e265ad4fe09893cf75b8dbfb77, accessed on October 25, 2023.

[23] Unites States Fish and Wildlife Service, "National Wetlands Inventory," accessed October 25, 2023, https://fwsprimary.wim.usgs.gov/wetlands/apps/wetlands-mapper/.

[24] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 451.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. Within Mountain View, there are no areas that are subject to approved local, regional, or State conservation plans.[25] Therefore, the proposed project would not have a substantial adverse effect on an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved plans, and no impact would occur.

3.5 CULTURAL RESOURCES

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
V. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	X			
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	X			
c) Disturb any human remains, including those interred outside of formal cemeteries?	X			

Would the project:

a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?

Potentially Significant Impact. Section 15064.5 defines historic resources as resources listed or determined to be eligible for listing by the State Historical Resources Commission, a local register of historical resources, or the lead agency. Generally a resource is considered "historically significant" if it meets one of the following criteria:

i) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

ii) Is associated with the lives of persons important in our past;

iii) Embodies the distinctive characteristics of a type, period, region or method of construction, or represents the work of an important creative individual, or possesses high artistic values;

[25] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 453.

iv) Has yielded, or may be likely to yield, information important in prehistory or history.

Construction of the proposed project would result in the removal of the MVPD building, which is recommended as eligible for listing in the California Register under Criterion iii.[26] Architect Goodwin Steinberg is recognized as a master architect, and the Mountain View Police Services–Fire Administration Building is an example of the large-scale civic projects that he designed during his 50-year career.[27] Although it is less than 50 years old, the building meets the threshold for special consideration for listing in the California Register because a sufficient amount of time has passed to understand Steinberg's exemplary career and the history and significance of Shed architecture and experimental solar technology of its era.[28] The impact of the proposed project on the significance of a historical resource pursuant to Section 15064.5 will be analyzed in the EIR.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

Potentially Significant Impact. The proposed project would require ground-disturbing activities and the construction of a new building and parking garage. Within Mountain View ten archaeological resources have been recorded and additional prehistoric archaeological resources may be undiscovered.[29] Therefore, it is unlikely but not impossible that archaeological resources would be discovered during excavation or grading. This impact will be analyzed further in the EIR.

c) Disturb any human remains, including those interred outside of dedicated cemeteries?

Potentially Significant Impact. A significant impact would occur if previously interred human remains were disturbed during excavation of the project site. Given the project site was previously disturbed, it is unlikely to support conditions conducive to the discovery of human remains. However, there is a remote possibility that human remains could be encountered during excavation and grading activities associated with the proposed project. This topic will be analyzed further in the EIR, and mitigation measures will be recommended, as applicable, to minimize the proposed project's effect.

[27] Forget Me Not History, 2023, Draft Historic Resource Evaluation, Mountain View Police Services - Fire Administration Building Mountain View, California.
[28] Forget Me Not History, 2023, Draft Historic Resource Evaluation, Mountain View Police Services - Fire Administration Building Mountain View, California.
[29] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 467.

3. Environmental Analysis

3.6 ENERGY

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. ENERGY. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			**X**	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			**X**	

Would the project:

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less Than Significant Impact. The following discusses the potential energy demands from short-term construction and long-term operational energy consumption associated with the new Public Safety Building, parking garage, shooting range, surface parking, and K-9 Training Unit.

Short-Term Construction Impacts

Construction of the proposed project would create temporary increased demands for electricity and vehicle fuels compared to existing conditions and would result in short-term transportation-related energy use. Construction of the proposed project would temporarily create an increased demand for electricity and vehicle fuels. It is not anticipated that construction equipment used for the proposed project would be powered by natural gas and no natural gas demand is anticipated during construction. Construction activities associated with the proposed project would require electricity use to power construction equipment. The electricity used during construction would vary during different phases of construction. Construction equipment during demolition, site preparation, trenching, and grading would be gas-powered or diesel-powered, and the later construction phases, such as architectural coatings, could require electric-powered equipment. Overall, the use of electricity would be temporary in nature and would fluctuate according to the phase of construction. Additionally, it is anticipated that the majority of electric-powered construction equipment would be hand tools (e.g., power drills, table saws, compressors) and lighting, which would result in minimal electricity usage during construction activities.

Transportation energy use depends on the type and number of trips, vehicle miles traveled, fuel efficiency of vehicles, and travel mode. Transportation energy used during construction would come from the transport and use of construction equipment, delivery vehicles, and construction employee vehicles that would use diesel fuel and/or gasoline. The use of energy resources by these vehicles would fluctuate

according to the phase of construction and would be temporary. Upon completion of project construction, all construction equipment would cease. Furthermore, construction contractors are anticipated to minimize non-essential idling of construction equipment during construction in accordance with Section 2449 of the California Code of Regulations, Title 13, Article 4.8, Chapter 9 as well as BAAQMD's BMP. Construction trips would also not result in unnecessary use of energy since the project site is centrally located and is served by numerous regional freeway systems (e.g., US-101 and SR-82) that provide the most direct routes from various areas of the region.

In addition, the proposed project would comply with Section 16.65, *Recycling/Diversion Requirement*, as outlined in the Mountain View Municipal Code. This section requires that 65 percent of nonhazardous construction and demolition waste on the project site be recycled and/or salvaged for reuse.[30] Following this regulation will reduce energy impacts from the creation of excessive waste.

Thus, energy use during construction of the project would not be considered inefficient, wasteful, or unnecessary. Impacts would be less than significant.

Long-Term Impacts During Operation

Electrical and natural gas services to the proposed project would be by provided Silicon Valley Clean Energy (SVCE) which partners with Pacific Gas and Electric to connect to existing offsite electrical lines and new onsite infrastructure.[31] During operation, energy would be used for heating, cooling, and ventilation of the building; water heating; onsite equipment; appliances; indoor, outdoor, and perimeter lighting; and security systems. The proposed project involves the demolition and reconstruction of the existing MVPD building onsite and a parking garage. While the overall total building square footage would increase from 44,914 square feet to 75,000 square feet, the proposed new building would be required to comply with the Building Energy Efficiency Standards and California Green Building Standards Code (CALGreen) and be LEED Gold Certified. Some of the features that may be part of the proposed project due to these requirements include installing Electric Vehicle (EV) charging stations, photovoltaic panels, and using electric water and heating systems.[32]

The existing building, built in 1980, does not include the same level of energy efficient standards under the CALGreen and LEED Certification standards. Thus, due to the following CALGreen and LEED Certified standards, the new building developed under the proposed project would be more energy efficient per

[30] City of Mountain View, Municipal Code – SEC. 16.65. - Recycling/diversion requirement, https://library.municode.com/ca/mountain_view/codes/code_of_ordinances?nodeId=PTIITHCO_CH16GARUWE_ARTIIICODEDEDI_S16.65REDIRE, accessed on March 14, 2024.

[31] City of Mountain View, "Renewable Energy," accessed October 23, 2023, https://www.mountainview.gov/our-city/departments/city-managers-office/sustainability/energy/renewable-energy?locale=en.

[32] City of Mountain View, Commercial 2022 Mountain View Green Building Code, https://www.mountainview.gov/home/showpublisheddocument/7364/638284859545330000, accessed on March 14, 2024.

square foot than the existing building and would not result in wasteful or unnecessary electricity or natural gas demands.

Once built, the proposed Public Safety Building would have an immediate personnel increase of thirteen (13) environmental health staff who would be relocated to the proposed project. This increase in staff is not substantial and is only a 7 percent increase from existing conditions. Therefore, implementation of the proposed project would generate a nominal increase in vehicle trips and would not result in significant additional vehicle fuel usage compared to existing conditions.

Thus, operation of the proposed project is not anticipated to increase the demand for electricity, natural gas, and transportation energy compared to existing conditions and impacts would be less than significant.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less than Significant Impact. The state's electricity grid is transitioning to renewable energy under California's Renewable Energy Program. Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas. Electricity production from renewable sources is generally considered carbon neutral. Executive Order S-14-08, signed in November 2008, expanded the state's renewable portfolio standard (RPS) to 33 percent renewable power by 2020. This standard was adopted by the legislature in 2011 (Senate Bill [SB] X1-2). SB 350 (de Leon) was signed into law September 2015 and establishes tiered increases to the RPS—40 percent by 2024, 45 percent by 2027, and 50 percent by 2030. SB 350 also sets a new goal to double the energy efficiency savings in electricity and natural gas through energy efficiency and conservation measures. On September 10, 2018, SB 100 (SB 100) was signed and raised California's RPS requirements to 60 percent by 2030, with interim targets, and 100 percent by 2045. The bill also established a state policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all state agencies by December 31, 2045. Under SB 100, the state cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100-percent carbon-free electricity target.

The statewide RPS goal is not directly applicable to individual development projects, but to utilities and energy providers, such as the Pacific Gas & Electric Company (PG&E), which is the utility that would provide for all electricity needs for the proposed project. The statewide RPS requirements do not directly apply to individual development projects, but to utilities and energy providers such as SVCE, whose compliance with RPS requirements would contribute to the state objective of transitioning to renewable energy. The net increase in power demand associated with the proposed project is anticipated to be within the service capabilities of SVCE and would not impede SVCE's ability to implement California's renewable energy goals. Therefore, the proposed project would not obstruct implementation of the California RPS Program.

Additionally, the proposed project would remove the existing MVPD building and development a new facility which would adhere to CALGreen and LEED Certified standards as required in Division III of the

Mountain View Municipal Code. As part of these standards certain energy efficiency design features could be followed such as installing bicycle parking and photovoltaic cells.

The project would not conflict with the California RPS Program or City of Mountain View Municipal Code. Therefore, implementation of the proposed project would have less than significant impact related in terms of conflicting with or obstructing plans for renewable energy and energy efficiency.

3.7 GEOLOGY AND SOILS

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. GEOLOGY AND SOILS. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map, issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.				X
ii) Strong seismic ground shaking?			X	
iii) Seismic-related ground failure, including liquefaction?	X			
iv) Landslides?			X	
b) Result in substantial soil erosion or the loss of topsoil?			X	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	X			
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?			X	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water?				X
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?			X	

Would the project:

a) **Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:**

i) **Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning map, issued by the State Geologist for the area or based on other**

substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

No Impact. According to the Mountain View General Plan EIR, no known faults or fault traces pass through the project site, and Mountain View is not located in a Alquist-Priolo Fault Zone.[33] The proposed project would not have substantial adverse effects involving Alquist-Priolo Fault Zones and surface rupture. No impacts would occur. This issue will not be reviewed further in the EIR.

ii) Strong seismic ground shaking?

Less Than Significant Impact. There are a number of faults in the northern California area that are considered active and could cause ground shaking at the project site. Some active faults that are closest to the project site are the San Andreas Fault 6.7 miles southwest of Mountain View, and the Hayward Fault 11.2 miles to the northeast.[34] All proposed structures would be constructed in accordance with applicable building codes and standards. The most recent building standard adopted by the legislature and used throughout the state is the 2022 version of the California Building Code (CBC) (Title 24, Part 2, California Code of Regulations). The CBC provides minimum standards to protect property and the public welfare and safety by regulating the design and construction of excavations, foundations, building frames, retaining walls, and other building elements to mitigate the effects of seismic shaking and adverse soil conditions. The CBC contains provisions for earthquake safety based on factors including occupancy type, the types of soil and rock on-site, and the strength of ground motion with a specified probability of occurring at the site. Also, the CBC requires the preparation of project-specific geotechnical/engineering reports by a certified engineering geologist and/or geotechnical engineer prior to construction of proposed structures. The proposed project would be required to comply with the recommendations in these reports. Any structures built for the proposed project would adhere to the most recent version of the CBC. Impacts would be less than significant. This issue will not be reviewed further in the EIR.

iii) Seismic-related ground failure, including liquefaction?

Potentially Significant Impact. According to the City of Mountain View General Plan EIR, most of Mountain View is underlain by materials that have moderate to very high liquefaction potential.[35] Due to this, the EIR will evaluate impacts related to seismic-related ground failure, including liquefaction.

[33] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 339.

[34] City of Mountain View, City of Mountain View General Plan EIR, Table IV.G-3: Active Faults in the Mountain View Vicinity, 334.

[35] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 336.

iv) Landslides?

Less Than Significant Impact. Landslides can occur during an earthquake in places with unstable slope conditions.[36] The City of Mountain View is mapped as Category 1 within the California Seismic Hazard Zones, that is, a stable area that is not underlain by landslide deposits.[37] Furthermore, the project site is not on a hill and does not have large slopes nearby. Therefore, impacts would be less than significant, and this issue will not be reviewed further in the EIR.

b) Result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. The proposed project would involve the removal of development on the site and construction of a Public Safety Building, parking garage, shooting range, surface parking, and K-9 training area. These activities could result in substantial soil erosion and would be required to comply with State and local requirements, such as the Construction General Permit that was adopted by the State Board and covers activities such as clearing, grading, and disturbances to the ground, such as grubbing or excavation.[38] In addition, Section 35.32.10 of the City of Mountain View Municipal Code requires an erosion control plan for projects extending into the rainy season.[39] Compliance with these measures will reduce impacts to a less than significant level, and this issue will not be reviewed further in the EIR.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Potentially Significant Impact.

Landslide. The project site is generally flat and is not in an area subject to landslides. Therefore, no impacts on people or structures would occur due to landslides.

Lateral Spreading. Lateral spread of the ground surface during an earthquake usually takes place along weak shear zones that have formed within a liquefiable soil layer.

Subsidence. The major cause of ground subsidence is withdrawal of groundwater. The development of the proposed project would not result in substantial changes in the quantity of existing groundwater supplies because no groundwater extraction activities would occur. Therefore, no impacts would occur.

[36] City of Mountain View, 2012, Mountain View 2030 General Plan, 337.
[37] City of Mountain View, 2012, Mountain View 2030 General Plan, 337.
[38] City of Mountain View, 2012, Mountain View 2030 General Plan, 343.
[39] City of Mountain View, 2012, Mountain View 2030 General Plan, 343.

Liquefaction. According to the City of Mountain View General Plan EIR, most of Mountain View is underlain by materials that have moderate to very high liquefaction potential.[40] Due to this, the EIR will evaluate if there are any impacts related to liquefaction.

Collapsible Soils. Collapsible soils consist of loose, dry, low-density materials that are weakly cemented and can collapse or be compressed with the addition of water or weight. Collapsible soils include young fine-grained alluvial materials, wind-deposited soils, and soils with salts. The project site is likely to have collapsible soils, as much of Mountain View is made up of alluvial soils.[41]

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less Than Significant Impact. Expansive soils swell when they become wet and shrink when they dry out, resulting in the potential for cracked building foundations and, in some cases, structural distress of the buildings themselves. The soils of the Mountain View area range from moderate to high shrink-swell potential.[42] Standard grading technologies and compliance with current grading requirements in accordance with the CBC for seismic safety would reduce impacts from expansive soils to a less than significant level. This issue will not be reviewed further in the EIR.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. Development of the proposed project would not require the installation of a septic tank or alternative wastewater disposal system. The proposed project would utilize the local sewer system. Therefore, no impacts would result from septic tank or other on-site wastewater disposal systems. This issue will not be reviewed further in the EIR.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant Impact. The proposed project would require ground-disturbing activities. Therefore, construction of the proposed project and earthwork activities have the potential to unearth unknown paleontological resources.

In the event that paleontological resources are discovered during earthwork activities, the proposed project would be required to comply with regulatory requirements in the California Public Resources Code Section 21083.2 and the City's condition of approval (COA) GEO-6.1: Discovery of Paleontological

[40] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 336.
[41] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 345.
[42] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 337.

Resources. Section 21083.2 of the California Public Resources Code requires the lead agency to make reasonable efforts to permit any or all resources to be preserved in place or left in an undisturbed state. Examples of that treatment, in no order of preference, may include but are not limited to (1) Planning construction to avoid archaeological sites, (2) Deeding archaeological sites into permanent conservation easements, and (3) Capping or covering archaeological sites with a layer of soil before building on the sites. Meanwhile, the City's COA GEO-6.1 outlines how if a fossil is found, excavations will be halted until the remain can be examined by a qualified paleontologist, and if the find is determined to be significant and if avoidance is not feasible, the paleontologist shall design and carry out a data recovery plan consistent with the Society of Vertebrate Paleontology standards. Additionally, the proposed project would comply with General Plan Goal LUD-11 and Policy 11-5, which seek to preserve and protect paleontological deposits.[43]

Therefore, through compliance with PRC Section 21083.2, the proposed project's potential for adverse impacts to unknown paleontological or a unique geological resource would be less than significant. This issue will not be examined further in the EIR.

3.8 GREENHOUSE GAS EMISSIONS

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	X			
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	X			

Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Potentially Significant Impact. Construction and operation of the proposed project would generate greenhouse gas (GHG) emissions. The EIR will discuss potential climate change impacts from GHG emissions generated by construction and operation of the proposed project. Mitigation measures will be recommended, as applicable, to minimize the proposed project's contribution to GHG emissions.

[43] City of Mountain View, 2012, Mountain View 2030 General Plan, page 54.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Potentially Significant Impact. The California Air Resources Board adopted the Scoping Plan in conformance with Assembly Bill (AB) 32. In addition, SB 375, the Sustainable Communities and Climate Protection Act of 2008, was adopted by the legislature to reduce per capita vehicle miles traveled and associated GHG emissions from passenger vehicles. The Association of Bay Area Governments adopted Plan Bay Area 2050 on October 21, 2021.[44] Plan Bay Area 2050 provides transportation and environmental strategies to continue to meet the regional transportation-related GHG reduction goals of SB 375. Construction of the proposed project has the potential to conflict with GHG reduction strategies and goals of Plan Bay Area 2050 and the California Air Resources Board's Scoping Plan. The EIR will discuss consistency of the proposed project with Plan Bay Area 2050 and the GHG reduction strategies of the Scoping Plan. Mitigation measures will be recommended, as applicable, to minimize the proposed project's contribution to GHG emissions.

3.9 HAZARDS AND HAZARDOUS MATERIALS

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
IX. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			**X**	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	**X**			
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			**X**	
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code § 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				**X**
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				**X**
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			**X**	

[44] Association of Bay Area Governments/Metropolitan Transportation Commission, 2021, "Plan Bay Area 2050," https://www.planbayarea.org/sites/default/files/documents/Plan_Bay_Area_2050_October_2021.pdf.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?				**X**

Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?

Less Than Significant Impact. Construction of the proposed project would require small amounts of hazardous materials, such as vehicle fuels, lubricants, grease, and transmission fluids in construction equipment, and paints and coatings. The handling, use, transport, and disposal of hazardous materials by the construction phase of the project would comply with existing regulations of several agencies—the US Environmental Protection Agency (EPA), California Division of Occupational Safety and Health, US Occupational Safety and Health Administration, and US Department of Transportation.

Operation of the proposed project would transport, use, store, and dispose of small amounts of hazardous materials typical of office buildings, such as cleaning and maintenance supplies (cleaners, gasoline, paint, and pesticides). The proposed project is a Public Safety Building and would use cleaners, other chemicals, and ammunition in relatively small quantities; these are not typically considered hazardous materials that could result in a significant hazard to the public or the environment.

All on-site activities during construction and operation would be required to adhere to federal and state regulations for the handling, transport, and disposal of hazardous materials. With the exercise of normal safety practices, the proposed project would not create substantial hazards to the public or the environment. Therefore, a less than significant impact would occur.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Potentially Significant Impact. The project site currently houses the MVPD. According to Table 3.9-1, *Hazardous Material Sites*, there are three cleanup sites near the property and one is active.

Table 3.9-1 Hazardous Materials Sites

Name	Address	Status	Distance from Project Site
Evelyn Avenue Parking Lot	954 Villa Street	No Further Action	0.2 miles south
Fremont Laundry	990 Villa Street	Certified/Operations & Maintenance	0.2 miles south
954 Villa Street	954 Villa Street	Active	0.2 miles south
Classic Communities	Bryant & West Evelyn St.	Completed – Case Closed	

Source: EnviroStor Database, accessed June 30, 2023, https://www.envirostor.dtsc.ca.gov/public/map/?myaddress=1000+villa+street.

The project site has not been identified on any of the regulatory databases as a hazardous waste generator, or as a facility that treats, stores or disposes of hazardous waste on-site. A Phase I Site Assessment is currently being conducted for the project site and the results for the Phase I Site Assessment will be further evaluated in the EIR. Therefore, impacts would be potentially significant.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less Than Significant Impact. As discussed under Section 3.9(a), construction and operation of the proposed project would handle small amounts of hazardous materials typical of construction activities and those used in the operation of office buildings. The use, transport, and storage of such hazardous materials would be required to comply with all applicable State and federal regulations that would ensure the proper handling of such materials. As discussed under Section 3.9(b), the site has not been identified on any of the regulatory databases as a hazardous waste generator, or as a facility that treats, stores, or disposes of hazardous waste on-site. No significant hazard from hazardous materials is expected at the project site. Therefore, impacts would be less than significant.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact. California Government Code Section 65962.5 requires the compiling of lists of the following types of hazardous materials sites: hazardous waste facilities; hazardous waste discharges for which the State Water Quality Control Board has issued certain types of orders; public drinking water wells containing detectable levels of organic contaminants; underground storage tanks with reported unauthorized releases; and solid waste disposal facilities from which hazardous waste has migrated.

Five environmental lists were searched for hazardous materials sites on the project site:

- GeoTracker. State Water Resources Control Board
- EnviroStor. Department of Toxic Substances Control

- EJScreen. US Environmental Protection Agency
- EnviroMapper. US Environmental Protection Agency
- Solid Waste Information System (SWIS). California Department of Resources Recovery and Recycling

As shown in Table 3.9-1, based on a search of these lists, four properties with potential hazardous materials are near the project site, however, the project site was not listed on any of the beforementioned lists. Due to the project site not being listed as a hazardous materials site, a hazardous substance release site, or a hazardous waste disposal site, the proposed project would not create a hazardous impact to the public because of a hazardous materials site pursuant to Government Code Section 65962.5.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles or a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. The closest airport to the project site is the Moffett Field Airport, which is 3.3 miles northeast from the project site. The Santa Clara Airport Land Use Commission has adopted a Comprehensive Land Use Plan for areas surrounding Santa Clara County public-use airports, which incorporates the airspace protection criteria provided in FAR Part 77.[45] While portions of the City of Mountain View are within protected airspace zones defined by the airport commission for the Moffett Field Airport, the project site is outside the Airport Influence Area for the Moffett Field Airport.[46] While there is one personal use heliport within the City of Mountain View at Google Inc, it is not listed in the Federal Aviation Administration's (FAA) National Plan of Integrated Airport Systems (NPIAS).[47] Due to this, the proposed project would not result in a safety hazard or excessive noise for people residing or working in the project area, and no impact would occur.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. The proposed project would have a significant impact if it would impair or physically interfere with an adopted emergency response plan or emergency evacuation plan. There is one plan that is relevant to the project site, the Emergency Response Plan, which is was created by the Mountain View Fire Department Office of Emergency Services. According to the Emergency Plan, the commuter train (VTA Light Rail and Caltrain), U.S. 101, Central Expressway, and State Highways 85 and 237 could be used as evacuation routes.[48] The proposed project would not interfere with these routes and

[45] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 397.

[46] Santa Clara County Airport Land Use Commission, December 2018, Moffett Federal Airfield, https://stgenpln.blob.core.windows.net/document/ALUC_NUQ_CLUP.pdf, accessed on March 14, 2024.

[47] Santa Clara County Airport Land Use Commission, October 2015, Heliports, https://stgenpln.blob.core.windows.net/document/ALUC_CLUP_Heliport.pdf, accessed on March 14, 2024.

[48] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 398.

would comply with applicable federal, State, and local regulations. Therefore, impacts would be less than significant.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

No Impact. As discussed in Section 3.20, *Wildfire*, neither the project site nor the surrounding community are in a very high fire hazard severity zone. The closest area designated as a very high fire hazard severity zone is at the Rancho San Antonio Open Space, approximately 7.2 miles south of the project site.[49] Development of the proposed project would comply with all applicable local and state building guidelines. The proposed project would not expose people or structures to a significant risk of loss, injury, or death involving wildfires, and no impact would occur.

3.10 HYDROLOGY AND WATER QUALITY

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
X. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?			X	
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?			X	
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) result in a substantial erosion or siltation on- or off-site;			X	
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;			X	
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or			X	
iv) impede or redirect flood flows?			X	
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?				X
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?			X	

[49] Cal Fire, "Fire Hazard Severity Zones in State Responsibility Areas," 2022, https://calfire-forestry.maps.arcgis.com/apps/webappviewer/index.html?id=4466cf1d2b9947bea1d4269997e86553.

Would the project:

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less Than Significant Impact. Urban runoff from storms or nuisance flows (runoff during dry periods) from development projects can carry pollutants to receiving waters. Runoff can contain pollutants such as oil, fertilizers, pesticides, trash, and sediment. This runoff can flow directly into local streams or into storm drains and continue through pipes until it is released untreated into a local waterway and eventually the ocean. Untreated stormwater runoff degrades water quality in surface waters and groundwater and can affect drinking water, human health, and plant and animal habitats.

The construction and operational phases of the proposed project could have the potential to impact water quality. Construction activities may impact water quality due to sheet erosion of exposed soils. Operational-related activities of the proposed project (e.g., runoff from parking areas, solid waste storage areas, and landscaped areas) would generate pollutants that could adversely affect the water quality of downstream receiving waters if effective measures are not used to keep pollutants out of and remove pollutants from urban runoff. The following is a discussion of the potential impacts that the construction and operational phases of the proposed project could have on water resources and quality.

Construction Activities

Clearing, grading, excavation, and construction activities associated with the proposed project may impact water quality through soil erosion and increasing the amount of silt and debris carried in runoff. Additionally, the use of construction materials such as fuels, solvents, and paints may present a risk to surface water quality. Finally, the refueling and parking of construction vehicles and other equipment on-site during construction may result in oil, grease, or related pollutant leaks and spills that may discharge into the storm drain system.

The EPA establishes national water quality standards. Pursuant to Section 402 of the Clean Water Act, the EPA has also established regulations under the National Pollution Discharge Elimination System (NPDES) program to control direct stormwater discharges. Mountain View lies within the jurisdiction of the San Francisco Bay Water Board, which enforces compliance with water quality objectives for beneficial uses of surface waters.[50]

The State Water Resource Control Board (SWRCB) mandates that projects that disturb one or more acres of land must obtain coverage under the Statewide Construction General Permit (CGP). The CGP requires that, prior to the start of construction activities, the project applicant must file Permit Registration Documents (PRD) with the SWRCB, which include a notice of intent, risk assessment, site map, annual fee,

[50] City of Mountain View, 2012, Draft 2030 General Plan and Greenhouse Gas Reduction Program Final Environmental Impact Report, 366.

signed certification statement, Stormwater Pollution Prevention Plan (SWPPP), and post-construction water balance calculations. The construction contractor is required to maintain a copy of the SWPPP on-site at all times and implement all construction BMPs identified in the SWPPP during construction activities. Prior to the issuance of a grading permit, the project applicant is required to provide proof of filing the PRDs with the SWRCB.

Submittal of the PRDs and implementation of the SWPPP and its associated BMPs throughout the construction phase of the proposed project would address anticipated and expected pollutants of concern due to construction activities. Additionally, the proposed project would be required to follow regulations within the Mountain View Municipal Code, such as in Chapter 35, Division 3, Section 35.33.11 which outlines how all construction projects must implement sediment and erosion control BMPs during construction of a project. The proposed project would comply with all applicable water quality standards and waste discharge requirements.

Operational Phase

Once the proposed project has been constructed, urban runoff could include a variety of contaminants that could impact water quality. Runoff from buildings and parking lots typically contains oils, grease, and fuel; antifreeze; byproducts of combustion (such as lead, cadmium, nickel, and other metals); and fertilizers, herbicides, pesticides, and other pollutants. Precipitation at the beginning of the rainy season may result in an initial stormwater runoff (first flush) with high pollutant concentrations.

To minimize these potential impacts the proposed project would be required to comply with the San Francisco Bay Region Municipal Regional Stormwater NPDES Permit (Order No. R2-2022-0018, NPDES Permit No. CAS612008, adopted May 11, 2022) through the Santa Clara Valley Urban Runoff Pollution Prevention Program. The NPDES requires the preparation of a Stormwater Management Plan that incorporates best management practices (BMP) to control sedimentation, erosion, and hazardous materials contamination of runoff during post construction. The stormwater management plan should be prepared under the direction of a professional civil engineer and would be reviewed and approved by the Mountain View Fire Department, Fire and Environmental Protection Division.[51] A preliminary Stormwater Management Plan showing how the project will incorporate post-construction stormwater controls is required as part of the Planning Permit application. Submittal of a revised Stormwater Management Plan is required as part of the Building Permit application.

The existing conditions at the project site are 105,074 square feet of impervious area and 78,127 square feet of pervious area. Through development of the proposed project, the total impervious area would be 103,738 square feet and the pervious area at the project site would 79,463 square feet. When compared to existing conditions, this would be a reduction of 1,336 square feet of impervious area and an increase

[51] City of Mountain View, 2012, Draft 2030 General Plan and Greenhouse Gas Reduction Program Final Environmental Impact Report, 369.

of 1,336 square feet of pervious area at the project site. A C.3 form was completed for the proposed project and outlines how the proposed project must comply with the stormwater requirements of the Santa Clara Valley Urban Runoff Pollution Prevention Program. The C.3 form includes specific stormwater control measures that address pollutant source reduction and provide measures/controls to mitigate potential pollutant sources. These include, but are not limited to site design measures, source control measures, and LID treatment measures. The C.3 form also identified specific stormwater treatment measures for the proposed project which included a bioretention unlined w/ underdrain, flow-through planter concrete lined w/ underdrain, pervious pavement w/ underdrain, and a tree filter w/ bioretention soil. The proposed project is exempt from hydromodification requirements due to the project site being outside of the area of hydromodification applicability.

According to the Mountain View Municipal Code Section 35.33, Permanent Stormwater Pollution Prevention Measures Required, permanent stormwater pollution prevention measures are required for redevelopment projects to reduce water quality impacts of stormwater runoff from the site for the life of the project.[52] Furthermore, since 2011 stormwater treatment controls must be designed to treat 100 percent of the required runoff with low-impact development measures.[53]

With the implementation of BMP features and compliance with State, county, and local regulations and code requirements, the proposed project would have a less than significant impact on surface or groundwater quality during the operational phase.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less Than Significant Impact. Approximately 1 percent of City's water supply comes from groundwater wells.[54] The rest of the water is purchased from the San Francisco Public Utilities Commission (SFPUC) and the Santa Clara Valley Water District (Valley Water), and a recycled water system is in the city's North Bayshore Area.[55] According to the Valley Water Urban Water Management Plan (UWMP), Valley Water will be able to meet countywide demands through 2045 under normal, single-dry, and five consecutive-dry year conditions.[56] The SFPUC UWMP states that if the Bay-Delta Plan Amendment is implemented, the SFPUC will be able to meet its projected water use demands in normal years but would experience significant supply shortages in single-dry years and multiple-dry years.[57]

[52] City of Mountain View Municipal Code, Section 35.45 Permanent Stormwater Pollution Prevention Measures Required.

[55] City of Mountain View, 2012, Mountain View 2030 General Plan, 120.
[56] Valley Water, June 2021, 2020 Urban Water Management Plan, 1.
[57] San Francisco Public Utilities Commission, 2021, Urban Water Management Plan, 1-1.

3. Environmental Analysis

The existing conditions at the project site are 105,074 square feet of impervious area and 78,127 square feet of pervious area. Through development of the proposed project, the total impervious area would be 103,738 square feet and the pervious area at the project site would 79,463 square feet. When compared to existing conditions, this would be a reduction of 1,336 square feet of impervious area and an increase of 1,336 square feet of pervious area at the project site. Some site design measures that would be utilized include ensuring there is a minimum-impact street parking lot design, cluster structures/ pavement, disconnected downspouts, pervious pavement, self-treating areas, and self-retaining areas. Source control measures include washing area/racks that drain to sanitary sewers, having a covered dumpster area, beneficial landscaping, outdoor material storage protection, covers, drains for loading docks, maintenance bays, fueling areas, preforming maintenance (such as pavement sweeping, catch basin cleaning, good housekeeping), and storm drain labeling. Low impact development (LID) treatments that would be a part of the proposed project include a bioretention area, flow-through planter, tree well filter with bioretention soils, and pervious pavement.[58]

Due to the proposed project increasing the amount of pervious surface area on the site, the amount of groundwater recharge in the area would increase, which would benefit the groundwater supplies in the area. Furthermore, the project site is not in or near a groundwater recharge area/facility, nor does it represent a source of groundwater recharge.

Therefore, the proposed project would not substantially interfere with groundwater supply or recharge. Valley Water and SFPUC would supply the facilities with water, and no water supply wells would be constructed or used. For these reasons, impacts on groundwater supplies or recharge would be less than significant.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in a substantial erosion or siltation on- or off-site?

Less Than Significant Impact. The proposed project would decrease impervious surfaces by 1,336 square feet compared to existing conditions. Due to the already developed conditions of the project site, the proposed project does not have the potential to increase stormwater runoff and peak discharges to a degree that would cause substantial erosion and siltation. The proposed project would not involve the alteration of any natural drainage channels or any watercourse.

Most of the potential erosion and siltation impacts would occur during the construction phase (e.g., grading, clearing, excavating, and cut-and-fill activities) of the proposed project. During construction, the project site would demolish hardscaping and remove some vegetation in preparation for grading,

[58] Santa Clara Valley Urban Runoff Pollution Prevention Program, November 2024 Provision C.3 Data Form.

which would expose loose soil to potential wind and water erosion. If not controlled, the transport of these materials to local waterways would temporarily increase suspended sediment concentrations and release pollutants attached to sediment particles into local waterways. As previously stated, the project would be required to submit PRDs and a SWPPP to the SWRCB for approval prior to the commencement of construction activities.

The operational phase of the project would contain a number of features to reduce the impact of erosion and siltation. The site design, source control, and treatment control BMPs for the operational phase are described in Section 3.10(a). Additionally, the proposed project would be required to follow regulations within the Mountain View Municipal Code, such as in Chapter 35, Division 3, Section 35.33.11 which outlines how all construction projects must implement sediment and erosion control BMPs during construction of a project. Implementation of the project's proposed construction phase and operational phase BMPs would therefore ensure that erosion and siltation impacts would be less than significant.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?

Less Than Significant Impact. The proposed project would decrease impervious surfaces by 1,336 square feet, which in turn would decrease stormwater runoff, result in lower peak discharges, and alleviate the potential for nuisance flooding in areas without adequate drainage facilities. Additionally, the implementation of site BMPs would reduce the amount of stormwater runoff reaching the City's storm drain system. The proposed project would also not involve the alteration of any natural drainage or watercourse. Therefore, impacts related to stormwater drainage and flooding are less than significant.

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less Than Significant Impact. As stated in Section 3.10(c)(ii), the proposed project would decrease impervious surfaces by 1,336 square feet, which in turn would decrease stormwater runoff, result in lower peak discharges, and alleviate the potential for nuisance flooding in areas without adequate drainage facilities.

The proposed project would not create substantial additional sources of polluted runoff. During the construction phase, the proposed project would be required to prepare a SWPPP that includes erosion controls, thus limiting the discharge of pollutants from the site. During operation, the proposed project would implement BMP measures that minimize the amount of stormwater runoff and associated pollutants. Additionally, during operation the proposed project would be required to prepare a Stormwater Management Plan that incorporates best management practices (BMP) to control sedimentation, erosion, and hazardous materials contamination of runoff during post construction.

With implementation of these measures, the project would not substantially increase the rate or amount of stormwater runoff in a manner that would cause flooding. Therefore, stormwater runoff would not exceed the capacity of existing or planned storm drain facilities.

iv) Impede or redirect flood flows?

Less than Significant. While the proposed project would have a larger footprint than the existing buildings that it would replace, the project site is near other buildings and would be unlikely to be a significant new impediment to flood flows. The project site is designated by the Federal Emergency Management Agency in Flood Zone X: Area of Minimal Hazard[59]. Therefore, there would be a less than significant impact to flood flows.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

No Impact. As noted in Section 3.10(c)(iv), above, the project site is in Flood Zone X, an area of minimal flooding hazard. Therefore, there is no risk of pollutant release due to flooding.

A seiche is a surface wave created when a body of water is shaken, usually by earthquake activity. Seiches are of concern relative to water storage facilities because inundation from a seiche can occur if the wave overflows a containment wall, such as the wall of a reservoir, water storage tank, dam or other artificial body of water. According to the California Department of Water Resources' Dam Breach Inundation Map, the campus is not within any dam's inundation area.[60] Therefore, there is no risk of pollutant release due to inundation from a seiche. No impact would occur.

Tsunamis are a type of earthquake-induced flooding produced by large-scale sudden disturbances of the sea floor. Tsunami waves interact with the shallow sea floor when approaching a landmass, resulting in an increase in wave height and a destructive wave surge into low-lying coastal areas. The proposed project is approximately 3.4 miles inland from the San Francisco Bay. Therefore, the site is outside the tsunami hazard zone and would not be affected by a tsunami.

Based on the preceding, the proposed project would not risk releasing pollutants as the result of floods, tsunami, or seiches. Therefore, there would be no impact.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less than Significant Impact. The proposed project would not conflict or obstruct the implementation of a water quality control plan or a sustainable groundwater management plan, such as the San Francisco Bay Basin Plan. The proposed project construction would be subject to the Statewide CGP and

[59] Federal Emergency Management Agency, 2009, "Flood Map Service" https://msc.fema.gov/portal/home.
[60] Department of Water Resources, 2023 (accessed), "California Dam Breach Inundation Map Web Publisher," https://fmds.water.ca.gov/webgis/?appid=dam_prototype_v2.

implementation of BMPs specified in the SWPPP. This would minimize the potential for erosion or siltation impacts to occur that could impact receiving waters. Also, the installation of BMPs would improve the quality of stormwater by physical filtration of sediment and solids and biological activity to remove pollutants.

The project site is in the Santa Clara Valley–San Mateo Plain groundwater basin. This basin is categorized as low and very low priority by the Department of Water Resources.[61] The Sustainable Groundwater Management Act requires medium- and high-priority basins to develop groundwater sustainability agencies and groundwater sustainability plans and to manage groundwater for long-term sustainability. Due to the project site being in a low and very low priority groundwater basin, these requirements do not apply.

Additionally, as substantiated in Sections 3.10.(a) and (b), above, the proposed project would not violate any water quality standards and would not decrease groundwater supplies or interfere substantially with groundwater recharge. Therefore, the proposed project would have a less than significant impact.

3.11 LAND USE AND PLANNING

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XI. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?				X
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?			X	

Would the project:

a) Physically divide an established community?

No Impact. The project site is currently developed with the existing MVPD building and associated parking lot and K-9 training area. The proposed project would construct a new Public Safety Building on the same site as the current MVPD building, and proposed improvements would not occur outside of the project site boundary. Additionally, the proposed project would improve the existing pedestrian areas on the site that would make the surrounding community easier to access, thereby improving connectivity to the community. Therefore, the proposed project would not physically divide an established community, and no impact would occur.

[61] State of California Department of Water Resources, "SGMA Basin Prioritization Dashboard," accessed July 5, 2023, https://gis.water.ca.gov/app/bp-dashboard/final/.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Less Than Significant Impact. As discussed in Section 1.3.1, *Existing Land Use*, the project site is currently zoned Public Facility (PF) with a corresponding General Plan land use designation of Parks, Schools and City Facilities. The project site currently functions as part of the Mountain View Police Department, and the use of the site is consistent with the existing zoning and General Plan land use designations. The proposed project would build a new a new Public Safety Building, parking garage, surface parking and K-9 training area that would be consistent with the existing zoning and General Plan land use designations. The proposed project is a city-owned facility, which is one of the principal permitted uses for this zoning designation, as outlined in Section 36.25.45 of Division 2, *Public Facility (Pf) Zoning District Standards*.[62] Similarly, the Parks, Schools and City Facilities land use designation in the Mountain View 2030 General Plan allows city facilities with an intensity up to 1.0 FAR.[63] Because the proposed project would have a FAR of 0.49 and would be owned by the City of Mountain View, the proposed project would be consistent with both the zoning and land use designations. Additionally, City projects have the ability to deviate in order to support the need to construct a building suitable to serve future community needs for the life of the building and reserve space for future City facility/land use needs. However, the proposed project would therefore not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, and a less than significant impact would occur.

3.12 MINERAL RESOURCES

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?				**X**
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				**X**

Would the project:

[62] City of Mountain View, Municipal Code SEC. 36.24.45. - Principal permitted uses, https://library.municode.com/ca/mountain_view/codes/code_of_ordinances?nodeId=PTIITHCO_CH36ZO_ARTVIIIOTZOOVDI_DIV2PUFAPFZODIST, accessed on March 14, 2024.

[63] City of Mountain View, July 2012, Mountain View General Plan 2030, https://www.mountainview.gov/home/showpublisheddocument/6469/638214115708670000, accessed on March 14, 2024.

a) Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?

No Impact. As described in the Mountain View General Plan 2030 EIR, it was found that no minerals or aggregate resources of statewide importance are located in Mountain View.[64] The General Plan EIR also found that no natural gas, oil, or geothermal resources are identified in or adjacent to Mountain View. [65] Therefore, the development of the proposed project would not result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state. No impact would occur.

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. As discussed under Section 3.12(a), the project site and the surrounding vicinity are not in an area identified as containing mineral resources or oil fields. The project site and the surrounding area are not used for mineral, oil, or gas extraction. Therefore, no impact would occur.

3.13 NOISE

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	X			
b) Generation of excessive groundborne vibration or groundborne noise levels?	X			
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			X	

Would the project result in:

[64] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 331

[65] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 331

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially Significant Impact. Noise that exceeds adopted thresholds may be generated during construction and operation of the proposed project. During construction, noise generated at the proposed project has the potential to generate excessive noise levels that exceed the standards adopted by the City. During operation, noise generated at the project site from additional personnel has the potential to increase noise levels beyond levels currently experienced. The EIR will address potential noise impacts associated with construction and operation, and if necessary, mitigation measures will be identified.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Potentially Significant Impact. Off-site vibration-sensitive land uses are on the east, south, and west of the proposed project. Construction activities have the potential to generate strong levels of vibration. The EIR will evaluate the potential for vibration generated by project-related construction activities to impact the residents to the east, south, and west of the EIR Study Area.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Less Than Significant Impact. The project site is located 3.3 miles southwest of the Moffett Federal Airfield. According to the Redlands Municipal Airport Land Use Compatibility Plan, the project site is outside of the 60 dBA and 65 dBA CNEL noise contour.[66] Consequently, the proposed project would not expose personnel to excessive noise levels from aircraft overflights, and impacts would be less than significant.

3.14 POPULATION AND HOUSING

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. POPULATION AND HOUSING. Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			X	
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				X

[66] Santa Clara County Airport Land Use Commission, 2012, "Comprehensive Land Use Plan Santa Clara County - Moffett Federal Airfield," https://stgenpln.blob.core.windows.net/document/ALUC_NUQ_CLUP.pdf.

Would the project:

a) **Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?**

Less Than Significant Impact. The proposed project would involve the development of a Public Safety Building, parking garage, surface parking, and a K-9 training area on the existing MVPD site. As described in Section 1.4, *Project Description*, the proposed project would have an immediate personnel increase of thirteen (13) environmental health staff who would be relocated to the proposed project. Due to this, the personnel on the site would increase from 169 people to 182 people. Within the Mountain View 2030 General Plan, the City has projected that within the project planning area the number of jobs would increase to approximately 990 by 2030.[67] Meanwhile, the Association of Bay Area Governments (ABAG) predicts that within Santa Clara County jobs will grow by 511,000 in 2050.[68] The increase in jobs induced by the proposed project is well within the General Plan and ABAG growth projections.

At maximum capacity the proposed project could contain 242 personnel. This number does not represent the immediate increase in staff but instead indicates the maximum future capacity of the building over a long period of time due to natural growth in staffing.

The proposed project does not include the construction of new homes or businesses and would not extend roads and other infrastructure off-site. In addition, as described previously, the proposed project would not exceed local growth projections for Mountain View or Santa Clara County. Therefore, the project would not directly or indirectly create unplanned levels of growth and impacts would be less than significant.

b) **Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?**

No Impact. The project site currently operates as a City facility; it does not contain any housing units. Therefore, the construction of the proposed project would not displace any people or housing units that could necessitate the construction of replacement housing elsewhere. No impact would occur.

[67] City of Mountain View, 2012, Mountain View 2030 General Plan, https://archive.mountainview.gov/civicax/filebank/blobdload.aspx?blobid=10702, accessed on February 26, 2024.
[68] Plan Bay Area, January 2021, Growth Pattern, https://www.planbayarea.org/sites/default/files/FinalBlueprintRelease_December2020_GrowthPattern_Jan2021Update.pdf , accessed on February 29, 2024.

3. Environmental Analysis

3.15 PUBLIC SERVICES

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. PUBLIC SERVICES. Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
Fire protection?			X	
Police protection?			X	
Schools?				X
Parks?				X
Other public facilities?			X	

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

a) Fire protection?

Less Than Significant Impact. The Fire and Environmental Protection Division oversees fire prevention programs in the City of Mountain View, and fire protection services are provided to the project site by the Mountain View Fire Department.[69] The closet fire station is Fire Station No. 1, approximately 0.1 miles southwest of the project site.

As discussed in Section 3.14, *Population and Housing*, the proposed project would not result in unplanned population growth. Although the development of the proposed project may increase the intensity of use on the site as compared to existing conditions, because the proposed project would not increase capacity nor induce population growth, the proposed project would not require new or physically altered fire protection facilities, construction of which could cause significant environmental impacts. As such, the proposed project would result in a less than significant impact to fire protection services.

[69] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 479.

b) Police protection?

Less than Significant Impact. Police protection services are provided to the project site by the MVPD. The MVPD also participates in a variety of mutual assistance agreements with neighboring police departments, Santa Clara County law enforcement, and State law enforcement organizations.[70]

As discussed under Section 3.15(a) above, the proposed project would not induce population growth. Therefore, the proposed project would not generate a new demand for police protection services. The proposed project would not require new or physically altered police protection facilities, construction of which could cause significant environmental impacts. The proposed project is a new police facility and this IS and EIR analyze its impacts. Therefore, the proposed project would result in a less than significant impact to police protection services.

c) Schools?

No Impact. The proposed project involves involve the development of a Public Safety Building, parking garage, surface parking, and a K-9 training area on the current MVPD building site. Typically, the demand for schools is created by new housing development or activities that generate additional population. As discussed in Section 3.14, *Population and Housing*, the proposed project would not generate residents. Therefore, the proposed project would not impact schools. This issue will not be reviewed further in the EIR.

d) Parks?

No Impact. Typically, the demand for parks is created by the development of new housing and/or actions that generate additional population. The proposed project would serve an existing staff, therefore it would not induce population growth or housing in the area, nor would it increase the use of existing parks or recreational facilities, or the need for new parks or recreational facilities. No impacts to parks would result from the proposed project. This issue will not be reviewed further in the EIR.

e) Other public facilities?

Less Than Significant Impact. The proposed project would be served by existing infrastructure, including public roads. Due to the size and general nature of the proposed project, impacts to public facilities are not anticipated to be significant. Development of the proposed project would not require new or altered governmental services for the maintenance of roadways or other public facilities. No new population would be generated by the proposed uses; therefore, no increased demand on other public facilities is anticipated. No significant impacts would occur. This issue will not be reviewed further in the EIR.

[70] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, 483.

3.16 RECREATION

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. RECREATION.				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			X	
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?				X

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities, such that substantial physical deterioration of the facility would occur or be accelerated?

Less Than Significant Impact. The demand for recreation facilities generally increases when the population of the surrounding area increases. As discussed in Section 1.4, *Project Description*, though the capacity of the building would increase, it would be due to consolidation and would not be unplanned or substantial enough to influence the recreational facilities in the area. Additionally, the proposed project would include a fitness area for onsite personnel that would lessen the pressure on offsite recreational areas. Therefore, the proposed project would not generate an increased demand for existing neighborhood and regional parks and other recreational facilities and would not result in substantial physical deterioration of such facilities nor cause deterioration to accelerate. Therefore, the proposed project would result in a less than significant impact to recreational resources.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

No Impact. The proposed project involves the construction of a Public Safety Building, parking garage, surface parking, and a K-9 training area on the current MVPD building site. The proposed project does not include the development of public recreational facilities. All proposed outdoor spaces are a part of the MVPD site and would be developed on the project site as part of the proposed project. As described in Section 3.14, *Population and Housing*, the proposed project would not induce population growth nor increase capacity of the building to an unplanned level. No demand for facilities off-site would be created by the proposed project. Therefore, no impact would occur.

3.17 TRANSPORTATION

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII. TRANSPORTATION. Would the project:				
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?			**X**	
b) Conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?	**X**			
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			**X**	
d) Result in inadequate emergency access?			**X**	

Would the project:

a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less Than Significant Impact. A significant impact may occur if the proposed project conflicts with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system. The City's Mobility Element sets forth goals and policies pertaining to complete streets, transit and public transportation, bicycle routes and pedestrian facilities, and safety, among others. The proposed project would support the City's Mobility Element.

The proposed project would provide a parking garage and surface parking lots which help promote more efficient parking on the project site. These features would be consistent with Goal MOB-7, to provide efficient and adequate vehicle parking.

Proposed project features would include landscaped pedestrian walkways connecting facilities within the site, as well as connections with the adjacent public sidewalks on Villas Street. The proposed project also includes street trees and streetscaping plants along public frontages in accordance with the City's standards to increase tree canopy and provide safe and inviting new pedestrian network. These design features would further support MOB 3.1, Pedestrian Network, and MOB 3.2, Pedestrian Connections.

The proposed project would be consistent with the General Plan's goals and policies, and the proposed project is not found to result in conflicts with adopted policies, plans, or programs, nor is it expected to negatively affect the performance or safety of existing or planned pedestrian, bicycle, or transit facilities. It is determined that the proposed project would have a less than significant impact on transit, roadway, bicycle, and pedestrian facilities in the vicinity of the project site.

3. Environmental Analysis

b) Conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?

Potentially Significant Impact. On September 27, 2013, SB 743 was signed into law, which started a process that fundamentally changed transportation impact analysis as part of CEQA compliance. These changes include the elimination of auto delay, level of service, and other similar measures of vehicular capacity or traffic congestion as a basis for determining significant impacts in CEQA review. As part of the updated CEQA Guidelines, the new criteria "shall promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses" (Public Resources Code sec. 21099(b)(1)). On January 20, 2016, the Governor's Office of Planning and Research released revisions to its proposed CEQA guidelines for the implementation of SB 743. Final review and rulemaking for the new guidelines were completed on December 28, 2018, when the California Natural Resource Agency certified and adopted the CEQA Guidelines update package, including guidelines implementing SB 743.

Vehicle miles traveled (VMT) is an indicator of the travel levels on the roadway system by motor vehicles. It corresponds to the number of vehicles multiplied by the distance traveled in a given period over a geographical area. In other words, VMT is a function of (1) number of daily trips and (2) the average trip length (VMT = daily trips x average trip length). The proposed project's VMT will be explored in the EIR. Mitigation measures will be incorporated as appropriate.

c) ASubstantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less Than Significant Impact. Vehicular access to the project site is planned to be accommodated by a total of four vehicle access points: two separate ingress and egress access points via Oak Street into the secure parking, one ingress/egress access point via Oak Street into the proposed parking garage, and one ingress/egress access point along Franklin Street into the visitor parking lot.

The all new vehicle access points at the proposed project site would be designed and constructed to ensure adequate vehicle and emergency access and provide a continuous path of travel. The proposed project does not include any major changes to roadways, driveways, or circulation. The proposed project's driveways and vehicular access points would not introduce hazardous design features. Additionally, the proposed project is an urban area and does not include incompatible uses such as farm equipment. As such, the proposed project does not represent an incompatible use. Therefore, the impact would be less than significant to geometric design features or incompatible uses.

d) Result in inadequate emergency access?

Less Than Significant Impact. The proposed project would allow emergency access to the site and does not alter any exiting public roadways. All parking lot and circulation patterns are subject to Fire Department access and review. Therefore, the proposed project would result in less than significant impacts to emergency access.

3.18 TRIBAL CULTURAL RESOURCES

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. TRIBAL CULTURAL RESOURCES.				
a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	X			
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	X			

a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

Potentially Significant Impact. As of July 1, 2015, Public Resources Code Sections 21080.1, 21080.3.1, and 21080.3.2 require public agencies to consult with California Native American tribes recognized by the Native American Heritage Commission for the purpose of mitigating impacts to tribal cultural resources.

In accordance with Public Resources Code Section 21080.1(d), a lead agency is required to provide formal notification of intended development projects to Native American tribes that have requested to be on the lead agency's list for receiving such notification. The formal notification is required to include a brief description of the proposed project and its location, lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation for tribal cultural resources. The proposed project would comply with tribal consultation requirements pursuant to AB 52. The City has reached out to the Native American Heritage Commission, and as of

the publication of this Initial Study, is awaiting a response. Tribal consultation will be conducted as part of the EIR and further evaluated in the EIR.

The proposed project would involve the construction of a new Public Safety Building, parking garage, shooting range, surface parking, and K-9 training area. The project site is currently developed and operates with similar uses. The existing building was determined to be eligible for listing in the California Register of Historical Resources or in a local register of historical resources, as defined in Public Resources Code Section 5020.1(k).[71,72] The results of the AB 52 tribal consultation and historical resources will be further discussed in the EIR.

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Potentially Significant Impact. As discussed under section 5.18(a), the proposed project would involve construction of a new Public Safety Building, parking garage, shooting range, surface parking, and K-9 training area. The project site is currently developed and operates with similar uses. The existing building was determined to be eligible for listing in the California Register of Historical Resources or in a local register of historical resources, as defined in Public Resources Code Section 5020.1(k).[73,74] The results of the AB 52 tribal consultation will be further discussed in the EIR.

3.19 UTILITIES AND SERVICE SYSTEMS

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			**X**	

[71] National Park Services, "National Register of Historic Places," accessed October 23, 2023, https://www.nps.gov/maps/full.html?mapId=7ad17cc9-b808-4ff8-a2f9-a99909164466.

[73] National Park Services, "National Register of Historic Places," accessed October 23, 2023, https://www.nps.gov/maps/full.html?mapId=7ad17cc9-b808-4ff8-a2f9-a99909164466.
[74] California State Parks, Office of Historic Preservation, "Santa Clara," accessed October 23, 2023 https://ohp.parks.ca.gov/?page_id=21522.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?			X	
c) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			X	
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			X	
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			X	

Would the project:

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less Than Significant Impact. The following is a discussion of the proposed project's potential impacts on water, wastewater treatment, storm water drainage, electric power, and telecommunications facilities.

Water Supply Facilities

The proposed project's water services would be provided by locally pumped groundwater and purchased water from the San Francisco Public Utilities Commission and the Santa Clara Valley Water District.[75] SFPUC collects water from the Tuolumne River in the Sierra Nevada and from protected local watersheds in the East Bay and Peninsula.[76] Valley Water maintains diverse water supply sources to meet countywide demands, including local surface water and groundwater, imported water, and recycled water.[77] According to the Valley Water UWMP, Valley Water will be able to meet countywide demands through 2045 under normal, a single dry, and five consecutive dry year conditions.[78] The SFPUC UWMP states that if the Bay-Delta Plan Amendment is implemented, the SFPUC will be able to meet the projected water use demands in normal years but would experience significant supply shortages in single dry years and multiple dry years.[79]

Water demand estimates for the existing uses on-site and proposed uses under the proposed project are included in Table 3.19-1, *Water Demands, Existing and Proposed*. As shown in the table, existing uses have

[75] City of Mountain View, 2012, Mountain View 2030 General Plan, 120.
[76] San Francisco Public Utilities Commission, 2020, Urban Water Management Plan.
[77] Santa Clara Valley Water District, 2020, Urban Water Management Plan.
[78] Valley Water, 2020, Urban Water Management Plan, 1.
[79] San Francisco Public Utilities Commission, 2021, Urban Water Management Plan, 1-1.

a total indoor water demand of 8,922,615 gallons per year (gpy) and an outdoor water demand of 5,468,683 gpy. The proposed project would have an indoor water demand of 14,899,500 gpy and an outdoor water demand of 9,131,925 gpy. Therefore, the proposed project would result in an increase in water demand of 5,976,884 gpy for indoor water use and 3,663,241 gpy for outdoor water use. Combined, this totals 9,640,126 gpy or about 30 acre-feet per year (afy).

Table 3.19-1 Water Demands, Existing and Proposed

Scenario	Building Area (SF)	Indoor Water Use Rate (gal/1000 Square Feet/year)	Indoor Water Use (gpy)	Outdoor Water Use Rate (gal/1000 Square Feet /year)	Outdoor Water Use Rate (gpy)
Existing Uses					
Government Office Building	45,000	198,660	8,922,615	121,759	5,468,683
Proposed Uses					
Government Office Building	75,000	198,660	14,899,500	121,759	9,131,925
Net Increase	-	-	5,976,884		3,663,241

Source: California Air Pollution Control Officers Association (CAPCOA), California Emissions Estimator Model Appendix D Default Data Tables, 2016, http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4.
Notes: SF = square feet;
[1] CAPCOA rate for "Government Office Building" is used.

The average of water demand for the City of Mountain from 2016 to 2020 is 9,303 afy, and in 2045 it is projected to be 14,163 afy.[80] The 30 afy that the proposed project creates would fit into the projected water demand and is currently being used by personnel at the existing police station. Therefore, impacts to water supply would be less than significant.

Wastewater Treatment Facilities

The City of Mountain View operates its own sewer system, which consists of 159 miles of gravity sewers (approximately 3,850 line segments), approximately one mile of 42-inch force main, and two pump stations.[81] The pump stations are at Shoreline Sewage Wastewater and Pastel Lane.[82]

The Shoreline Sewage Wastewater station pumps an average of 9 million gallons per day of untreated sewage to the Palo Alto Regional Water Pollution Control Plant and is designed to be a gravity flow system in the event of a mechanical failure.[83] The Pastel Lane pump station is much smaller and serves approximately 10 single-family homes.

The proposed project would increase employee capacity, which would lead to an increase in wastewater generation when compared to existing facilities. However, this increase would be marginal, and project

[80] City of Mountain View, 2021, City of Mountain View Urban Water Management Plan, 19.
[81] City of Mountain View, 2018, Sewer System Management Plan, 1.
[82] City of Mountain View, 2018, Sewer System Management Plan, 34.
[83] City of Mountain View, 2018, Sewer System Management Plan, 34.

development would not require the construction of new or expanded wastewater treatment facilities. Impacts to wastewater treatment facilities would be less than significant.

Stormwater Drainage Facilities

See response to Section 3.10(c)(iii), *Hydrology and Water Quality*, above. As substantiated in this section, impacts would be less than significant, and will not be further analyzed in the EIR.

Electrical Service

Electrical services to the proposed project would be provided by Silicon Valley Clean Energy (SVCE), which partners with Pacific Gas and Electric to connect to existing off-site electrical lines and new on-site infrastructure.[84] Total mid-demand electricity deliveries to end users by SVCE are forecast to increase by 0.71 percent between 2020 and 2030.[85] Project development would not require SVCE to obtain new or expanded electricity supplies, such as electrical power stations or new facilities/infrastructure that would generate additional electric power. SVCE provides clean energy to Silicon Valley communities from geothermal, battery storage, solar and storage, solar power, long duration storage, and wind generation.[86]

The proposed project would be required to comply with energy efficiency standards set forth by Title 24 of the CCR and the Appliance Efficiency Regulations. The project would be required to comply with CALGreen requirements related to energy and water conservation. The proposed project would also include the required EV parking spaces based on the CALGreen standards, however the overall energy uses would be within the SVCE energy supplies. Overall, applicable CALGreen requirements would decrease electricity consumption.

Therefore, the proposed project would not result in a substantial increase in electrical service demands. Pacific Gas and Electric would not need to expand its supply and transmission facilities to handle the demand generated by the proposed project, and impacts would be less than significant.

Telecommunication Facilities

The proposed project would include on-site connections to telecommunication services. AT&T provides telephone services in Mountain View and hosts a variety of other telecommunication services, including digital subscriber line (DSL), internet service provider (ISP), web hosting, virtual private networking, U-verse, multiprotocol label switching (MPLS), and wireless/cellular paging services.[87]

[86] Silicon Valley Clean Energy, Renewable Projects, accessed October 27, 2023, https://svcleanenergy.org/power-sources/.

[87] City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, Part III, 541.

3. Environmental Analysis

Due to the availability of telecommunications facilities in the area, the proposed project would not result in the need to construct new telecommunications facilities, and impacts would be less than significant.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less Than Significant Impact. While the proposed project would increase the employee capacity of the site by 13 employees, which would increase the water demand on the site, however the demand would not cause an increase that would affect Valley Water's or SFPUC's ability to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years.

Valley Water will be able to meet countywide demands through 2045 under normal, a single dry, and five consecutive dry year conditions.[88] Meanwhile, SFPUC states that if the Bay-Delta Plan Amendment is implemented, SFPUC will be able to meet the projected water use demands in normal years but would experience significant supply shortages in single dry years and multiple dry years.[89]

Furthermore, development of the proposed project would be required to comply with CALGreen standards for indoor water use reduction and site irrigation conservation. Specifically, project development would adhere to mandatory nonresidential measures outlined in Division 5.3, Water Efficiency and Conservation, of CALGreen, including those of Sections 5.303, *Indoor Water Use*, and 5.304, *Outdoor Water Use*.

Based on the preceding, there are adequate water supplies to meet the water demands of the proposed project, and project development would not require the Valley Water or SFPUC to obtain new or expanded water supplies. Therefore, impacts on water supplies due to project development would be less than significant.

c) Result in a determination by the waste water treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less Than Significant Impact. The stormwater and wastewater flows from the project site are expected to marginally increase but would not be enough to require construction of new or expanded wastewater treatment facilities. Though the proposed project will increase employee capacity at the project site, which would increase wastewater generation, the increase would not overburden the wastewater treatment provider that serves the site. Therefore, impacts would be less than significant.

[88] Valley Water, June 2021, 2020 Urban Water Management Plan, 1.
[89] San Francisco Public Utilities Commission, 2021, Urban Water Management Plan, 1-1.

d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less Than Significant Impact. Recology Mountain View provides solid waste and recycling services to Mountain View. All nonrecyclable waste is transferred to the Kirby Canyon Landfill at 910 Coyote Creek Golf Drive in San Jose.[90] Capacity and disposal data for the landfill is shown in Table 3.19-2, *Landfill Capacity*. As shown in the table, the Kirby Canyon Landfill has a residual capacity of 1,871 tons per day.

Table 3.19-2 Landfill Capacity

Landfill	Current Remaining Capacity (tons)[1]	Maximum Daily Disposal Capacity (tons)	Average Daily Disposal, 2022 (tons)[2]	Residual Daily Disposal Capacity (tons)	Estimated Close Date
Kirby Canyon Landfill	16,191,600	2,600	729[3]	1,871[4]	2059

Sources:
CalRecycle, 2022 "Landfill Tonnage Reports," https://www2.calrecycle.ca.gov/LandfillTipFees/.
CalRecycle, "SWIS Facility/Site Activity Details," https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/2767?siteID=2103

1 A Volume-to-Weight conversion rate of 2,000 lbs/cubic yard (1 tons/cubic yard) for "Compacted - MSW Large Landfill with Best Management Practices" is used as per CalRecyle's 2016 Volume-to-Weight Conversion Factors https://www.epa.gov/sites/production/files/201604/documents/volume_to_weight_conversion_factors_memorandum_04192016_508fnl.pdf.

2 Average daily disposal is calculated based on 300 operating days per year. The facility is open six days per week, Monday through Saturday, except certain holidays.

3 218,795 tons in 2022 / 300 days of operation = 729.32 tons/day = 729 tons/day

4 2,600 – 729 = 1,871 tons/day

Based on the building square footage, the proposed project is estimated to generate a net increase of about 180 pounds of solid waste per day, as shown in Table 3.19-3, *Net Increase in Solid Waste Generation*.

Table 3.19-3 Net Increase in Solid Waste Generation

Scenario	Square Feet	Solid Waste Generation, pounds per day[1]	
		Per square foot	Total
Existing Conditions			
Office Building	45,000	0.006	270
Proposed Conditions			
Office Building	75,000	0.006	450
		Net increase	180

Source: CalRecycle, Estimated Solid Waste Generation Rates, https://www2.calrecycle.ca.gov/WasteCharacterization/General/Rates.

1 CalRecycle rate for "Office" used.

As demonstrated in Table 3.19-3, there is adequate landfill capacity for the proposed project's forecast solid waste, and project development would not require additional landfill capacity at the landfill serving the city. The total amount of solid waste expected to be generated under the proposed project would be minimal compared to the total permitted daily maximum solid waste tonnage per day of the landfill serving the city.

90 City of Mountain View, 2012, Draft 2030 General Plan and Greenhous Gas Reduction Program Final Environmental Impact Report, State Clearinghouse No. 2011012069, Part III, 535.

Additionally, CALGreen Section 5.408.1.1 requires that at least 65 percent of the nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse. The City would comply with these established building code standards.

Based on the preceding, impacts on landfill capacity would be less than significant and will not be further analyzed in the EIR.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Less Than Significant Impact. Solid waste would be generated during construction and operation of the proposed project. The proposed project would comply with all regulations pertaining to solid waste, such as the California Integrated Waste Management Act and local recycling and waste programs. The City and its construction contractor would comply with all applicable laws and regulations and make every effort to reuse and/or recycle the construction debris that would otherwise be taken to a landfill. Section 5.408 of CALGreen requires that at least 65 percent of the nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse. Hazardous waste, such as paint used during construction, would be disposed of only at facilities permitted to receive them in accordance with local, State, and federal regulations. The proposed project would comply with all applicable federal, State, and local statutes and regulations related to solid waste disposal. Therefore, impacts would be less than significant.

3.20 WILDFIRE

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XX. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?				**X**
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?				**X**
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?				**X**
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?				**X**

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones (FHSZ), would the project:

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

No Impact. The project site is not in or near a state responsibility area for wildfire nor land classified as a very high FHSZ.[91] The closest state responsibility area that has a high fire hazard classification is near Rancho San Antonio Open Space, approximately 7.2 miles south of the project site.[92] The project site is in an urbanized area and is not in or near a very high fire hazard zone. The City of Mountain View has prepared an emergency operations plan that describes the City's incident management organization, compliance with relevant legal statutes, other relevant guidelines, whole community engagement, and critical components of the incident management structure.[93] The proposed project would not conflict with the emergency operations plan, and the surrounding roadways would continue to provide emergency access to the project site and surrounding properties during construction and operational activities. To address emergency and fire access needs, the site improvements would be required to be designed in accordance with all applicable building codes and the City of Mountain View Fire Department design standards for emergency access. Therefore, no impact would occur.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

No Impact. The existing Mountain View Police Department building is in an urban area, and there is no wildland susceptible to wildfire on or near the site. Furthermore, CAL FIRE does not classify any adjacent areas as a very high FHSZ.[94] Project development would not place people or structures at risk from wildfire. Therefore, no impact would occur.

[91] CAL Fire, 2022, "Fire Hazard Severity Zones," https://osfm.fire.ca.gov/divisions/community-wildfire-preparedness-and-mitigation/wildfire-preparedness/fire-hazard-severity-zones/#explorefhsz.

[92] CAL Fire, 2016, "State Responsibility Area (SRA) Viewer," https://calfire-forestry.maps.arcgis.com/apps/webappviewer/index.html?id=468717e399fa4238ad86861638765ce1.

[93] City of Mountain View, 2022, "Emergency Operations Plan," https://www.mountainview.gov/home/showpublisheddocument/5422/638144797362630000.

[94] CAL Fire, 2022, "Fire Hazard Severity Zones,"https://osfm.fire.ca.gov/divisions/community-wildfire-preparedness-and-mitigation/wildfire-preparedness/fire-hazard-severity-zones/#explorefhsz.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

No Impact. The existing Mountain View Police Department building is in an urban area surrounded by development. The building improvements would not require the installation of new infrastructure that may exacerbate fire risk. Therefore, no impact would occur.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

No Impact. The existing Mountain View Police Department building is surrounded by development with flat topography. There are no vegetated slopes susceptible to wildfire in the surrounding area. Therefore, the proposed project would not result in runoff, post-fire slope instability, or drainage changes. No impact would occur.

3.21 MANDATORY FINDINGS OF SIGNIFICANCE

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XXI. MANDATORY FINDINGS OF SIGNIFICANCE.				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	X			
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	X			
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	X			

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially

reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Potentially Significant Impact. As discussed above in Section 3.3, *Air Quality*; Section 3.4, *Biological Resources*; Section 3.5, *Cultural Resources*; Section 3.7, *Geology and Soils;* Section 3.8, *Greenhouse Gas Emissions*; Section 3.13, *Noise*; Section 3.17, *Transportation*; and Section 3.18, *Tribal Cultural Resources*; these topics will be analyzed in a focused EIR.

Therefore, the topics analyzed in this initial study do have potential to substantially degrade the quality of the environment, reduce habitat or wildlife population numbers, or eliminate California history, and the impacts would be potentially significant and will be further evaluated in the EIR..

b) **Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)**

Potentially Significant Impact. The potential for cumulative impacts occurs when the independent impacts of a given project are combined with the impacts of related projects in proximity to the project site that would create impacts that are greater than those of the project alone. Related projects include past, current, and/or probable future projects whose development could contribute to potentially significant cumulative impacts in conjunction with a given project. As discussed throughout this Initial Study, the proposed project may have potentially significant impacts. Therefore, the impacts would be potentially significant and will be further evaluated in the EIR.

c) **Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?**

Potentially Significant Impact. As discussed in the above analyses, the proposed project may result in significant direct or indirect adverse impacts or result in substantial adverse effects on human beings. Therefore, the impacts would be potentially significant and will be further evaluated in the EIR.

Re: 2024120444 Mountain View Public Safety Building Project, Santa Clara County

Dear Mr. Govind,

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

a. A brief description of the project.

b. The lead agency contact information.

c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).

d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

a. Alternatives to the project.

b. Recommended mitigation measures.

c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

a. Type of environmental review necessary.

b. Significance of the tribal cultural resources.

c. Significance of the project's impacts on tribal cultural resources.

d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

a. Whether the proposed project has a significant impact on an identified tribal cultural resource.

b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Mathew.Lin@NAHC.ca.gov.

Sincerely,

Mathew Lin

CalEEMod Inputs - Mountain View Police Department Project Construction Asumptions

Name:	Mountain View Police Department Project
Project Number:	SVA-1.0
Project Location:	1000 Villa Street, Mountain View, CA 94041
County/Air Basin:	Santa Clara
Climate Zone:	1
Land Use Setting:	Urban
Gas Utility Company:	PG&E
Electric Utility Company:	PG&E
Air Basin:	San Francisco Bay Area
Air District:	Bay Area AQMD (BAAQMD)

Project Site Acreage	4.12
Disturbed Site Acreage	3.52

Project Components				
Asphalt Demolition	**Building SQFT**	**Tons of Debris**		
Building Demolition[1]	44,914	2,066		
Asphalt Demolition[2]	108,553	1,608		
Construction	**Number of Units**	**SQFT**	**Building Footprint**	**Acres**
Police Department Building (3-story)[3]	-	87,215	25,000	0.57
Parking Garage (3-story)	214	102,785	38,333	0.88
Parking Surface Lot[4]	75	70,967	70,967	1.63
Hardscaping	-	14,375	14,375	0.33
Landscaping	-	4,792	4,792	0.11
Undisturbed Area	-	26,000	26,000	0.60
TOTAL		**192,919**	**179,467**	**4.12**

Notes

[1] Based on assumption that all asphalt under disturbed site acreage will be hauled.

[2] Asphalt square footage assumed to be the balance of site after accounting for the existing building footprint and undisturbed land.

[3] Includes 12,215 square feet for the shooting range to account for area and energy source emissions.

[4] Parking Lot square footage based on the site balance after accounting for all other proposed uses.

CalEEMod Land Use Inputs

Land Use Type	Land Use Subtype	Unit Amount	Size Metric	Lot Acreage	Building Square Feet	Landscape Area Square Feet	Special Landscape Area Square Feet
Commercial	Government Office Building	87.22	1000 sqft	0.68	87,215	4,792	0
Parking	Enclosed Parking With Elevator	214	Spaces	0.88	102,785	0	0
Parking	Surface Parking Lot	75	Spaces	1.63	70,967	0	0
Hardscaping	Other Asphalt Surfaces	14.37	1000 sqft	0.33	14,375	0	0
				3.52			

Demolition Haul

Construction Activities	Amount to be Demolished (Tons)	Haul Truck Capacity (Tons)	Haul Distance (miles)	Total Trip Ends	Total Days	Trip Ends/Day
Asphalt Demolition[1,2,3]	1,608	16	20	202	51	4
Building Demolition[4,5]	2,066	16	20	260	51	5
	3,674					**9**

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	SVA 1.0 - Mountain View Police Department
Construction Start Date	4/15/2025
Operational Year	2027
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	32.8
Location	37.39552833743578, -122.08126249468367
County	Santa Clara
City	Mountain View
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1732
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.23

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Government Office Building	87.2	1000sqft	1.72	87,215	4,792	0.00	—	—
Enclosed Parking with Elevator	214	Space	0.69	102,785	0.00	0.00	—	—
Parking Lot	75.0	Space	0.69	0.00	0.00	0.00	—	—
Other Non-Asphalt Surfaces	14.4	1000sqft	0.33	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.7	annual days of extreme heat
Extreme Precipitation	4.40	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	8.55	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	14.9

AQ-PM	15.6
AQ-DPM	85.1
Drinking Water	49.5
Lead Risk Housing	21.3
Pesticides	0.00
Toxic Releases	32.4
Traffic	71.5
Effect Indicators	—
CleanUp Sites	89.4
Groundwater	62.4
Haz Waste Facilities/Generators	69.6
Impaired Water Bodies	51.2
Solid Waste	0.00
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	20.0
Healthy Places Index Score for Project Location (b)	99.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Project Description
Construction: Construction Phases	Adjusted to applicant schedule
Construction: On-Road Fugitive Dust	BAAQMD Guidance
Operations: Vehicle Data	ITE Code 571
Operations: Energy Use	All-electric design
Construction: Trips and VMT	See Appendix A for calculations

2025 Workdays 187
2026 Workdays 261
2027 Workdays 206

Notes:

1. The max seasonal daily emission rates (Winter vs Summer) were used for each daily emission estimate.

2. Off-site Emissions shown herein account for a reduction in emissions to capture the emissions generated within 1,000 feet of the project site along identified hauling roadways (1.6 miles / 20 miles default hauling distance = 0.08 Adjustment Factor). The estimates provided in this table are used solely for the construction HRA.

3. Total emissions are divided by total workdays. Workdays total may not add up due to the omission of days which overlap.

3.15. Architectural Coating (2027) - Unmitigated	*0.000*	*0.132*	*0.011*	*46*	*0.000*	*0.485*
				2027 AVERAGE DAILY LBS	*0.00000*	*0.07195*
TOTALS	*5.565*	*3.524*	*0.282*	*654*	*89.233*	*40.780*
				AVERAGE DAILY LBS	*0.13644*	*0.06235*

Notes:

2. The max seasonal daily emission rates (Winter vs Summer) were used for each daily emission estimate.

2. Off-site Emissions shown herein account for a reduction in emissions to capture the emissions generated within 1,000 feet of the project site along identified hauling roadways (1.6 miles / 20 miles default hauling distance = 0.08 Adjustment Factor). The estimates provided in this table are used solely for the construction HRA.

4. Total emissions are divided by total workdays. Workdays total may not add up due to the omission of days which overlap.

MITIGATED Regional Construction Emissions Worksheet:

2025 Workdays 187
2026 Workdays 261
2027 Workdays 206

Notes:

1. The max seasonal daily emission rates (Winter vs Summer) were used for each daily emission estimate.

2. Off-site Emissions shown herein account for a reduction in emissions to capture the emissions generated within 1,000 feet of the project site along identified hauling roadways (1.6 miles / 20 miles default hauling distance = 0.08 Adjustment Factor). The estimates provided in this table are used solely for the construction HRA.

3. Total emissions are divided by total workdays. Workdays total may not add up due to the omission of days which overlap.

1. Health Risk Assessment

1.1 CONSTRUCTION HEALTH RISK ASSESSMENT

The City of Mountain View is the lead agency for the proposed project to build a new Public Safety Building. The proposed project would remove the existing Mountain View Police Department (MVPD) building and associated parking lot and K-9 training area, and construct a new Public Safety Building, parking garage, shooting range, surface parking, and K-9 training area at the same location. In the eastern corner of the project site, 0.6-acre would remain undeveloped for future potential uses by the City.

The current MVPD building is 44,914 square feet, and the proposed Public Safety Building would be approximately 75,000 gross square feet. The proposed Public Safety Building would have a variety of offices and associated service rooms for police and fire activities. Some of the designated areas include an auditorium, offices, sleep quarters, lockers, and a fitness room. All new facilities would meet current state building standards and would be LEED certified. Currently, the administrative fire personnel operate out of the Mountain View Fire Department Station No. 1, and they would be relocated to the proposed Public Safety Building.

The project is preliminarily scheduled to start in April 2025 and be completed in October 2027. The Public Safety Building would be constructed in the first development phase, and after completion, the second development phase would remove the MVPD building and install the parking garage.

Construction activities would include building and asphalt demolition and excavation, site preparation and rough grading, building construction, paving, and architectural coating. Construction would take place from 7:00 am to 4:00 pm, Monday through Friday, as allowed by the Mountain View Municipal Code, Section 8.70, Construction Noise. The active construction and staging areas would be on the project site.

The latest version of the Bay Area Air Quality Management District (BAAQMD) CEQA Air Quality Guidelines recommends projects to evaluate the impacts of construction activities on nearby receptors (BAAQMD 2022). Project construction is anticipated to take place starting at the beginning of April 2025 and be completed in October 2027 (approximately 654 workdays). The nearest receptors to the project site include residents that are on-site and adjacent to the southern project boundary, students at Mountain View Academy approximately 785 feet southeast of the project site, and students at Khan Lab School adjacent to the western project boundary.

Because receptors, including sensitive receptors such as residents, are present in land uses near the project site, a site-specific construction HRA has been prepared for the proposed project. This HRA considers the health impact to nearby receptors (e.g., residents, workers, students) from construction emissions at the project site, including diesel equipment exhaust (diesel particulate matter or DPM) and particulate matter less than 2.5 microns ($PM_{2.5}$).

It should be noted that these health impacts are based on conservative (i.e., health protective) assumptions. The United States Environmental Protection Agency (USEPA 2005) and the Office of Environmental Health Hazard Assessment (OEHHA 2015) note that conservative assumptions used in a risk assessment are intended to ensure that the estimated risks do not underestimate the actual risks. Therefore, the estimated risks may not necessarily represent actual risks experienced by populations at or near a site. The use of conservative assumptions tends to produce upper-bound estimates of exposure and thus risk.

For residential receptors, the following conservative assumptions were used:

- It was assumed that maximum-exposed off-site residential receptors stood outdoors and are subject to DPM at their residence for 8 hours per day, and approximately 260 construction days per year. In reality, California residents typically will spend on average 2 hours per day outdoors at their residences (USEPA 2011). This would result in lower exposures to construction related DPM emissions and lower estimated risk values.

- The calculated risk for infants from third trimester to age 2 is multiplied by a factor of 10 to account for early life exposure and uncertainty in child versus adult exposure impacts (OEHHA 2015).

For K-12 students, the following conservative assumptions were used:

- It was assumed that maximum exposed receptors stood outside and are subject to DPM for 8 hours per weekday and approximately 180 construction days per year.

For workers, the following conservative assumptions were used:

- It was assumed that maximum exposed receptors stood outside and are subject to DPM for 8 hours per weekday and approximately 250 construction days per year.

1.2 METHODOLOGY AND SIGNIFICANCE THRESHOLDS

For this HRA, the BAAQMD significance thresholds were deemed to be appropriate and the thresholds that were used for this project are shown below:

- Excess cancer risk of more than 10 in a million
- Non-cancer hazard index (chronic or acute) greater than 1.0
- Incremental increase in average annual $PM_{2.5}$ concentration of greater than 0.3 $\mu g/m^3$

The methodology used in this HRA is consistent with the following BAAQMD and the OEHHA guidance documents:

- BAAQMD. 2022. *California Environmental Quality Act (CEQA) Air Quality Guidelines*. April 2023.
- BAAQMD. 2016. *Planning Healthy Places*. May 2016.
- OEHHA. 2015. *Air Toxics Hot Spots Program Guidance Manual for the Preparation of Health Risk Assessments*. February 2015.

Potential exposures to DPM and $PM_{2.5}$ from proposed project construction were evaluated for nearby receptors to the site. Pollutant concentrations were estimated using an air dispersion model, and excess lifetime cancer risks and chronic non-cancer hazard indexes were calculated. These risks were then compared to the significance thresholds used for this HRA.

1.3 CONSTRUCTION EMISSIONS

Construction emissions were calculated as average daily emissions in pounds per day, using the proposed construction schedule and the latest version of California Emissions Estimation Model, known as CalEEMod Version 2022.1. DPM emissions were based on the CalEEMod construction results, using maximum daily exhaust PM_{10} emissions. The $PM_{2.5}$ emissions were taken from the CalEEMod output for maximum daily $PM_{2.5}$ exhaust and fugitive dust.

Construction of the proposed project was assumed to take place over approximately 22 months (654 workdays) from April 2025 to October 2027. The average daily emission rates from construction equipment used during the proposed project were determined by multiplying the maximum daily emissions for each construction activity by the duration of that activity, summing the total emissions from all construction activities, and dividing the summed total by the total construction workdays (654 days). The CalEEMod construction emissions output and emission rate calculations are provided in Attachment A.

1.4 DISPERSION MODELING

Air quality modeling was performed using the AERMOD atmospheric dispersion model to assess the impact of emitted compounds on sensitive receptors near the project. The model is a steady state Gaussian plume model and is an approved model by BAAQMD for estimating ground level impacts from point and fugitive sources in simple and complex terrain. The on-site construction emissions for the project were modeled as area sources. The off-site mobile sources were modeled as line sources. The model requires additional input parameters, including chemical emission data and local meteorology. Inputs for the construction emission rates are those described in Section 1.3. Meteorological data obtained from the BAAQMD for the nearest representative meteorological station (Moffet Field Airport) with the five latest available years (2013 to 2017) of record were used to represent local weather conditions and prevailing winds.

The modeling analysis also considered the spatial distribution and elevation of each emitting source in relation to the sensitive receptors. To accommodate the model's Cartesian grid format, direction-dependent calculations were obtained by identifying the Universal Transverse Mercator (UTM) coordinates for each source location. In addition, digital elevation model (DEM) data for the area were obtained and included in the model runs to account for complex terrain. An emission release height of 4.15 m was used as representative of the stack exhaust height for off-road construction equipment and diesel truck traffic, and an initial vertical dispersion parameter of 1.93 m was used, per California Air Resources Board (CARB) guidance (2000). For fugitive dust sources, an emission release height of 0 m was used to represent dust generated by ground disturbing activities and roadway dust re-entrainment.

To determine contaminant impacts during construction hours, the model's Season-Hour-Day (HRDOW) scalar option was invoked to predict flagpole-level concentrations (1.5 m) for construction emissions generated between the hours of 7:00 AM and 4:00 PM with a 1-hour lunch break.

A unit emission rate of 1 gram per second was used for all modeling runs. The unit emission rates were proportioned over the poly-area sources for on-site construction emissions and divided between the line volume sources for off-site hauling emissions. The maximum modeled concentrations from the output files were then multiplied by the emission rates calculated in Attachment A to obtain the maximum flagpole-level concentrations at the maximum exposed receptor (MER) for each receptor type. The air dispersion modeling predicted the MER for each receptor type near the project site include a residence approximately 40 feet south of the project site, worker receptors approximately 50 feet east of the project site, and K-12 student receptors approximately 460 feet west of the project site at Khan Lab School.

The MER locations are the receptor locations associated with the maximum predicted AERMOD concentrations resulting from the on-site construction emissions. The calculated on-site emission rates are approximately 3 to 4 orders of magnitude higher than the calculated off-site emission rates (see Attachment A). Therefore, the maximum concentrations associated with the on-site emission sources produce the highest overall MER concentrations and, consequently, highest calculated health risks.

The air dispersion model output for the emission sources is presented in Attachment A. The model output DPM and $PM_{2.5}$ concentrations from the construction emission sources are provided in Attachment A.

1.5 RISK CHARACTERIZATION

1.5.1 Carcinogenic Chemical Risk

A threshold of ten in one million ($10x10^{-6}$) has been established by OEHHA and recommended by BAAQMD and other air districts as a level posing no significant risk for exposures to carcinogens. Health risks associated with exposure to carcinogenic compounds can be defined in terms of the probability of developing cancer as a result of exposure to a chemical at a given concentration. The cancer risk probability is determined by multiplying the chemical's annual concentration by its cancer potency factor (CPF), a measure of the carcinogenic potential of a chemical when a dose is received through the inhalation pathway. It is an upper-limit estimate of the probability of contracting cancer as a result of continuous exposure to an ambient concentration of one microgram per cubic meter ($\mu g/m^3$) over a lifetime of 70 years.

Guidance from OEHHA recommends a refinement to the standard point estimate approach with the use of age-specific breathing rates and age sensitivity factors (ASFs) to assess risk for susceptible subpopulations such as children. For the inhalation pathway, the procedure requires the incorporation of several discrete variates to effectively quantify dose for each age group. Once determined, contaminant dose is multiplied by the cancer potency factor in units of inverse dose expressed in milligrams per kilogram per day $(mg/kg/day)^{-1}$ to derive the cancer risk estimate. Therefore, to accommodate the unique exposures associated with the sensitive receptors, the following dose algorithm was used.

$$\text{Dose}_{\text{AIR,per age group}} = \left(C_{air} \times EF \times \left[\frac{BR}{BW}\right] \times A \times CF\right)$$

Where:

Dose_{AIR}	=	dose by inhalation (mg/kg-day), per age group
C_{air}	=	concentration of contaminant in air ($\mu g/m^3$)
EF	=	exposure frequency (number of days/365 days)

BR/BW	=	daily breathing rate normalized to body weight (L/kg-day)
A	=	inhalation absorption factor (default = 1)
CF	=	conversion factor ($1x10^{-6}$, μg to mg, L to m^3)

The inhalation absorption factor (A) is a unitless factor that is only used if the cancer potency factor included a correction for absorption across the lung. The default value of 1 was used for this assessment. An exposure frequency (EF) of 0.96 is used for residential receptors to represent 350 days per year to allow for a two-week period away from home each year, an EF of 0.49 was used for K-12 student receptors to represent 180 school days a year where students would be at their respective campus, and an EF of 0.68 was used for worker receptors to represent 250 workdays per year (OEHHA 2015). A fraction of time at home (FAH) factor applied to residential and on-site UCC student-resident receptors. The 95th percentile daily breathing rates (BR/BW), exposure duration (ED), age sensitivity factors (ASFs), and FAH for the various age groups are provided herein:

Age Groups	BR/BW (L/kg-day)	ED	ASF	FAH
Third trimester	361	0.25	10	0.85
0-2 age group	1,090	0.95	10	0.85
3-9 age group	861	1.20	3	0.85
16-30 age group	335	1.20	1	0.85

To represent the unique characteristics of children and senior residents, the assessment employed the USEPA's guidance to develop viable dose estimates based on reasonable maximum exposure, defined as the "highest exposure that is reasonably expected to occur" for a given receptor population. To calculate the overall cancer risk, the risk for each appropriate age group is calculated per the following equation:

$$\text{Cancer Risk}_{\text{AIR}} = \text{Dose}_{\text{AIR}} \times \text{CPF} \times \text{ASF} \times \text{FAH} \times \frac{\text{ED}}{AT}$$

Where:

Dose_{AIR}	=	dose by inhalation (mg/kg-day), per age group
CPF	=	cancer potency factor, chemical-specific $(\text{mg/kg-day})^{-1}$
ASF	=	age sensitivity factor, per age group
FAH	=	fraction of time at home, per age group (for residential receptors only)
ED	=	exposure duration (years)
AT	=	averaging time period over which exposure duration is averaged (30 years)

The CPFs used in the assessment were obtained from OEHHA guidance. The excess lifetime cancer risks during the construction period to the maximally exposed resident were calculated based on the factors provided above. The cancer risks for each age group are summed to estimate the total cancer risk for each toxic chemical species. The final step converts the cancer risk in scientific notation to a whole number that expresses the cancer risk in "chances per million" by multiplying the cancer risk by a factor of $1x10^6$ (i.e., 1 million). The calculated results are provided in Attachment A.

1.5.2 Non-Carcinogenic Hazards

An evaluation was also conducted of the potential non-cancer effects of chronic chemical exposures. Adverse health effects are evaluated by comparing the annual receptor level (flagpole) concentration of each chemical compound with the appropriate reference exposure limit (REL). Available RELs promulgated by OEHHA were considered in the assessment.

The hazard index approach was used to quantify non-carcinogenic impacts. The hazard index assumes that chronic sub-threshold exposures adversely affect a specific organ or organ system (toxicological endpoint). Target organs presented in regulatory guidance were used for each discrete chemical exposure. To calculate the hazard index, each chemical concentration or dose is divided by the appropriate toxicity value. This ratio is summed for compounds affecting the same toxicological endpoint. A health hazard is presumed to exist where the total equals or exceeds one.

The chronic hazard analysis for DPM is provided in Attachment A. The calculations contain the relevant exposure concentrations and corresponding reference dose values used in the evaluation of non-carcinogenic exposures.

1.6 CONSTRUCTION HRA RESULTS

The calculated results are provided in Attachment A and the results are summarized in Table 1.

TABLE 1. CONSTRUCTION RISK SUMMARY - UNMITIGATED

Receptor	Cancer Risk (per million)	Chronic Hazards	$PM_{2.5}$ ($\mu g/m^3$)
MER – Resident	70.03	0.06	0.06
MER – Worker	0.87	0.04	0.04
MER – K-12 Student	7.63	0.06	0.06
BAAQMD Threshold	*10*	*1.0*	*0.30*
Exceeds Threshold?	Yes	No	No

Note: Cancer risk calculated using 2015 OEHHA HRA Guidance Manual.

Cancer risk for the residential MER from project-related construction emissions was calculated to be approximately 70 in one million, which would exceed the 10 in one million significance threshold. Cancer risk for the worker and K-12 student receptors were calculated to be approximately 1 and 8 in one million, respectively, which would not exceed the 10 in one million significance threshold. In accordance with the latest 2015 OEHHA guidance, the calculated total cancer risk conservatively assumes that the residential MER consists of a pregnant woman in the third trimester that subsequently gives birth to an infant during the duration of construction; therefore, all calculated residential risk values were multiplied by a factor of 10. In addition, it was conservatively assumed that the residents were outdoors 8 hours a day, 261 construction days per year and exposed to all of the daily construction emissions.

For non-carcinogenic effects, the chronic hazard index identified for each toxicological endpoint equaled less than one for each identified receptor. Therefore, chronic non-carcinogenic hazards are within acceptable limits. For all receptors, the maximum annual $PM_{2.5}$ concentration would not exceed the BAAQMD significance threshold.

Because cancer risk for the residential MER would exceed the BAAQMD significance threshold during project construction, the following measure is proposed:

> **Mitigation Measure AQ-1.** The City of Mountain View shall specify in the construction bid that the project construction contractor(s) and subcontractor(s) comply with the following requirements for all off-road equipment used over the entire duration of the construction activities at the site:

- Use engines that meet either US EPA or California Air Resources Board (CARB) Tier 4 Final emission standards for engines that are greater than 25 horsepower. Ensure that all construction plans submitted to the City of Mountain View Building Division clearly show the selected emission reduction strategy for construction equipment over 25 horsepower.
- If Tier 4 Final equipment is not available for use for the project for a specific piece of off-road construction equipment, documentation shall be provided to the City demonstrating that such equipment is not available for the project. If Tier 4 Final equipment is not available, the construction contractor(s) and subcontractor(s) affected shall use Tier 4 Interim equipment instead. If Tier 4

Interim equipment is not available for use for the project for a specific piece of off-road construction equipment, documentation shall be provided to the City demonstrating that such equipment is not available for the project. If Tier 4 Interim equipment is not available, the construction contractor(s) and subcontractor(s) affected shall use Tier 3 equipment outfitted with a level 3 diesel particulate filter instead.

- Prohibit the use of generators except for electric alternatives. The City shall ensure that all construction plans submitted to the City of Mountain View Building Division clearly show the requirement to use power storage equipment or electric generators in lieu of fossil fuel powered generators.
- Maintain a list of all operating equipment in use on the project site for verification by the City or their designee. The construction equipment list shall state the makes, models, fuel type, and number of construction equipment on-site. All equipment shall be properly serviced and maintained in accordance with the manufacturer's recommendations.
- Communicate with all sub-contractors in contracts and construction documents that all non-essential idling of construction equipment is restricted to 5 minutes or less in compliance with California Air Resources Board Rule 2449 and is responsible for ensuring that this requirement is met.

Mitigation Measure AQ-1 would reduce the proposed project's localized construction emissions at the residential MER, as shown in the following Table 2. The results indicate that, with mitigation, cancer risk would be less than the BAAQMD's significance thresholds at the residential MER, and all other receptors would be less than the BAAQMD's significance thresholds during unmitigated project construction. Therefore, the proposed project would not expose nearby receptors to substantial concentrations of air pollutant emissions during construction, and this impact would be *less than significant* with mitigation.

TABLE 2. CONSTRUCTION RISK SUMMARY - MITIGATED

Receptor	Cancer Risk (per million)	Chronic Hazards	$PM_{2.5}$ ($\mu g/m^3$)
MER – Resident	7.58	0.01	<0.01
BAAQMD Threshold	*10*	*1.0*	*0.30*
Exceeds Threshold?	No	No	No

Note: Cancer risk calculated using 2015 OEHHA HRA Guidance Manual.
Risks incorporate Mitigation Measure AQ-1, which requires the use of construction equipment which meets USEPA Tier 4 Final engine requirements for equipment over 25 horsepower and prohibits fossil fuel powered generators.

1.7 CUMULATIVE COMMUNITY HEALTH RISK

In addition to a project-level HRA, BAAQMD recommends assessing the potential cumulative impacts from sources of TACs within 1,000 feet of a project. For the cumulative analysis, BAAQMD maintains several tools and databases for identifying risks at a particular location. The existing TACs that BAAQMD recommends including in a cumulative analysis include permitted stationary sources, marine sources, roadway sources, rail sources, and highway sources. Risks from permitted stationary sources within 1,000 feet of the project site can be identified using BAAQMD's *Stationary Source Screening Map* (BAAQMD 2024). Risks from roadway sources are released periodically from the BAAQMD in the form of risk assessment screening tools (RAST), which were utilized in determining associated risks at the daycare MER during project construction. The daycare MER was utilized in the cumulative community risk assessment as it represents the greatest

impact to nearby receptors during project construction. No marine or rail risks are shown in the cumulative HRA as no marine or rail activities occur within 1,000 feet of the project site.

Table 3 summarizes the existing TAC source risks at the daycare MER from mitigated project construction emissions in combination with existing TAC sources within 1,000 feet of the project site. As shown therein, the proposed project's mitigated construction emissions combined with existing TAC emissions within 1,000 feet do not exceed the BAAQMD's cumulative community health risk significance thresholds at the daycare MER location, and this impact would be *less than significant* with mitigation.

TABLE 3. CUMULATIVE COMMUNITY RISK SUMMARY

Source	Source Type	Distance to MER[1]	Cancer Risk (per million)	Chronic Hazards	$PM_{2.5}$ ($\mu g/m^3$)
Project Impacts					
Mitigated Project Construction[2]	Diesel Construction Equipment	40	7.58	0.01	<0.01
Permitted Stationary Source Impacts					
City of Mountain View Fleet Services (Facility ID 14209)	Generator	525	0.06	<0.01	<0.01
City of Mountain View Fleet Services (Facility ID 14228) (Current Project Site)	Generator	60	-	-	-
250 Bryant (Facility ID 23027)	Generator	345	<0.01	<0.01	<0.01
Rail Impacts					
BAAQMD-provided Rail values[3]	Locomotives	-	22.85	0.01	0.03
Roadway Impacts					
BAAQMD-provided Roadway values[3]	Vehicles	-	9.93	0.03	0.24
Cumulative Health Impacts					
Cumulative Project Health Impacts			40.42	0.05	0.27
BAAQMD Threshold			100	10.0	0.80
Exceeds Threshold?			No	No	No

Notes: N/D = No Data; N/A = Not Applicable

[1] Values expressed in feet. Residential MER is a residence approximately 40 feet south of the project site.

[2] Includes Mitigation Measure AQ-1.

[3] BAAQMD-provided values correspond with risks experienced at the residential MER.

1. INTRODUCTION

At the request of PlaceWorks, Forget Me Not History has prepared this Historic Resource Evaluation (HRE) for the Mountain View Police Services - Fire Administration Building located at 1000 Villa Street (APN 158-15-027) in Mountain View, California. The building and associated landscaping and parking lots are located within an irregularly shaped, 4.2-acre parcel spanning the majority of the block bounded by W. Evelyn Avenue to the north, Franklin Street to the east, Villa Street to the south, and S. Shoreline Boulevard to the west in the Old Mountain View neighborhood (Figure 1). The building was designed by the prominent architecture firm Goodwin B. Steinberg Associates and was completed in 1980. The following HRE report provides a physical description and historic summary of the property's development within the City of Mountain View and an evaluation for its listing in the California Register of Historical Resources (California Register) for project review under the California Environmental Quality Act (CEQA).

Figure 1. Aerial photograph of the subject property (bounded in red) and immediate vicinity (Google Earth, March 2022, amended).

METHODOLOGY

To prepare this HRE, Forget Me Not History completed a site visit of the subject property on April 12, 2023. The property was documented in digital photographs and field notes. All photographs presented in this report were taken during the site visit, unless otherwise noted.

Forget Me Not History conducted archival research at the Mountain View History Center housed at the Mountain View Public Library and digital repositories, including Ancestry.com, Newspapers.com, Online Archive of California, Internet Archive, David Rumsey Map Collection, and others. The City of Mountain View provided drawings and plans of the original design and subsequent alterations to the municipal building. The firm reviewed a wide array of documents, including architectural drawings, newspaper articles, aerial and archival photographs, maps, and publications on the development of Mountain View, the architecture firm Goodwin B. Steinberg & Associates, and mid- to late-twentieth century Shed architecture and solar technology in the United States. In particular, the Environmental Design Archives (EDA) at the University of California, Berkeley; Pacific Coast Architecture Database (PCAD); Avery Index to Architecture Periodicals; and US Modernist Architecture Magazine Library were reviewed for information on the architecture firm. The California Office of Historic Preservation's Built Environment Resource Directory (BERD) for Santa Clara County and the Mountain View Register of Historic Resources were also reviewed.

EXISTING HISTORIC STATUS

The Mountain View Police Services - Fire Administration Building has not been previously documented and evaluated for listing in the National Register of Historic Places, California Register of Historical Resources, and Mountain View Register of Historic Resources.[1]

2. PROPERTY DESCRIPTION

The following section provides a physical description of the subject property and immediate vicinity. Additional photographs are provided in Appendix A.

SITE DESCRIPTION

The property containing the Mountain View Police Services - Fire Administration Building spans the majority of the block bounded by W. Evelyn Avenue to the north, Franklin Street to the east, Villa Street to the south, and S. Shoreline Boulevard to the west in the Old Mountain View neighborhood. The immediate setting comprises late nineteenth and early twentieth century, one- and two-story, detached residences located at the southwest corner of the block and south of Villa Street. A two-story office building constructed in 1961 and a four-story apartment building completed in 2013 are located on the east side of Franklin Street. The Caltrain right-of-way and Central Expressway (County Route G6) extend east-west immediately north of W. Evelyn Avenue.

The Mountain View Police Services - Fire Administration Building is situated at the southeast corner of the property and is oriented southeast toward the intersection of Franklin and Villa streets. Oak Street enters the block and terminates at a cul-de-sac immediately west of the building. A low masonry sign is located at the southwest corner of the building. The sign is formed by three walls of concrete slump stone blocks built into the embankment. A flagpole is located just behind the sign, and a small ledge supporting two lights extends along the base of the sign. A contemporary steel communication tower is located within a chain link fence enclosure at the west façade. Small parking lots are located south and east of the building, with a larger parking lot located to the north. A small pump house servicing the

[1] California Office of Historic Preservation, Built Environment Resource Directory (BERD), Santa Clara County, accessed April 27, 2023, https://ohp.parks.ca.gov/?page_id=30338.

surrounding residential neighborhood was constructed ca. 2005 within a fenced area at the northwest corner of the parcel. The remainder of the property comprises landscaping with grass, ivy, shrubs, and a variety of trees.

Figure 2. Site plan of the subject property (bounded in red) (Google Earth, March 2022, amended).

BUILDING DESCRIPTION

The two-story Mountain View Police Services - Fire Administration Building is constructed of reinforced concrete slump stone blocks and has an irregular plan formed by wings and projections with varying depths across each façade. The main story is located at grade, and the lower story is partially embedded in the sloped terrain of the site. Except for an expanse of a flat roof centered above the main lobby, the building features multi-directional shed roofs with varying heights and slopes. The shed roofs are covered with clay tile. A number of skylights in varying sizes, including a large pyramidal skylight above the main lobby, are situated on the flat roof section of the building.

The building features several window types that are referenced as follows:

- elongated, aluminum-sash fixed windows enframed by projecting slump stone blocks (referenced as "elongated fixed window") (Figure 3)

- elongated, aluminum-sash box bay windows that extend slightly above the roofline and that have a flat roof ("referenced as "elongated box bay window") (Figure 4)

- aluminum-sash, six-light fixed windows with elongated lower lights and enframed by projecting slump stone blocks (referenced as "six-light fixed window") (Figure 5)

- bands of aluminum-sash fixed clerestory windows located on select north-facing walls (referenced as "clerestory window") (Figure 6)

Figure 3. Elongated fixed windows on the south façade.

Figure 4. Elongated box bay window on the east façade.

Figure 5. Six-light fixed window on the east façade.

Figure 6. Clerestory window on the east façade.

South Façade

For the purposes of this report, the primary façade of the building is known as the south façade. It is one story in height except for a two-story section at the east end. The main entrance to the building is located centrally on the south façade and is flanked by wings that extend south on each side, forming an entry plaza (Figure 7). A wide concrete walkway with two sets of stairs and a concrete ramp flanked by terraced slump stone block planters extend from the southern parking lot to the entry plaza. The main entrance comprises an aluminum commercial storefront assembly with glazed double doors. The entrance is enframed by a deep, projecting shed roof canopy with a sloped ceiling.

Figure 7. South façade, view north from the southern parking lot.

Elongated fixed windows are located east and west of the main entrance and face the entry plaza; one of the eastern windows extends above the roofline and has a shed roof covered with clay tile. Slump stone block planters span underneath both sets of windows. A smaller aluminum commercial storefront assembly with a single glazed door is located on the west wall facing the entry plaza. This entrance is enframed by projecting slump stone blocks. Terraced slump stone block planters extend along the eastern wall facing the entry plaza, wrap around the building corner, and terminate just below a single elongated fixed window facing the parking lot.

At the eastern section of the south façade (facing the parking lot), a concrete staircase descends from the entry plaza to a paved patio at the lower level of the building. This portion of the façade is two stories in height and has a shallow projection with a shed roof. Two elongated fixed windows and an inset balcony with a metal railing are located at the main story within this projection (Figure 8). An entrance and bands of windows are located at the balcony. A recessed entrance flanked by bands of windows and slump stone block planters is located at the lower story.

Figure 8. Eastern section of the south façade, view northeast.

The western section of the south façade features a prominent 45-foot-tall clock tower with a full-height alcove on the south wall, a shed roof, and a geometric polychrome clock panel at the roofline (Figure 9). Slump stone block planters are located at the base of the clock tower and wrap around the corner, connecting with the planters extending along the ramp. The remainder of the façade is characterized by wall surfaces of varying depths and elongated fixed windows of varying heights.

Figure 9. Clock tower on the south façade, view north.

East Façade

The east façade is one story in height and features complex surfaces formed by projections with varying depths. A box bay window located above an L-shaped, slump stone box planter and an entrance with a glazed door accessed by a concrete staircase are located at the southern end of the façade (Figure 10). The entrance and an adjacent set of clerestory windows face north (Figure 11). At the central section of the façade, a grouping of three box bay windows are flanked on each side by a six-light fixed window (Figure 12). A box bay window and a recessed entrance with a glazed door and concrete staircase are located at the north end of the façade (Figure 13).

Figure 10. Southern section of the east façade, view west.

Figure 11. Southern section of the east façade, view southwest.

Figure 12. Central section of the east façade, view west.

Figure 13. Northern section of the east façade, view west.

North Façade

The north façade is two stories in height, and its main story is dominated by three large openings formed by soaring shed roofs supported by steel tube supports and crossbeams, which are painted blue (Figure 14). The central opening is taller-in-height and extends north beyond the wall plane. The openings have sloped ceilings with expanses of angled skylights below (Figure 15). The main story is also finished with smooth cement plaster.

Figure 14. North façade, view south from the northern parking lot.

Recessed entrances are located on either side of the central opening. Each entrance has metal glazed doors with angled skylights above. Each entrance leads to a concrete walkway with slump stone block planters and a staircase that descends to the ground level. The walkways are supported by slump stone block columns and are open underneath. A secondary entrance with a solid door opens to the eastern walkway, while the western walkway provides access to an adjacent balcony enclosed by slump stone block walls at the north and east ends and a metal gate at the west end. A secondary entrance is accessed from the balcony (Figure 17).

At the east end of the lower story is a wide window box with divided lights and angled windows forming the roof. A set of blue steel tube supports is located to the west and is stacked underneath the steel supports at the main story (Figure 16). Fenced areas enclosing mechanical equipment, an emergency generator, and animal cages are located immediately to the north. Underneath the walkway is a recessed entrance stacked underneath the one above. A wide louvered metal vent for air intake, a smaller louvered metal vent, and a solid metal door are located in the central section of the lower story. An inset storage area enclosed with a metal gate is located underneath the western balcony, and an inset entrance and a set of metal double doors are located underneath the western walkway. The remainder of the lower story is lined with two small inset parking garages (Figure 18). Extending from the northwest corner of the building is a small carport with an L-shaped plan, metal supports, and a flat roof covered with ribbed metal sheets.

Figure 15. Eastern section of the main story of the north façade, view southeast.

Figure 16. Eastern section of the lower story of the main façade, view southeast.

Figure 17. Central section of the north façade, view south.

Figure 18. Western section of the north façade, view south.

West Façade

The west façade is predominantly one story in height due to the rise in topography. At the north end of the west façade is a single glazed door accessed by a concrete staircase (Figure 19). A variety of windows, including elongated fixed, six-light fixed, box bay, and clerestory windows, extend along the central portion of the façade (Figure 20). The south end of the façade transitions to two stories in height; a metal gate encloses this area (Figure 21). At the main story, a short staircase rises to a walkway with a metal railing with glass panels. Behind the railing are a solid metal door and a band of projecting slump stone blocks infilled with a ribbon window situated above a standing seam metal panel. A second staircase descends to the lower patio. A slump stone block retaining wall spans the eastern edge of the patio, and an inset entrance flanked by windows and a slump stone block planter is located at the northern end (Figure 22). A large square slump stone block planter is located at the ground level immediately south of this gated area.

Figure 19. Northern section of the west façade, view east.

3. SITE HISTORY

The following chronology on the development of the Mountain View Police Services - Fire Administration Building and immediate vicinity was compiled using archival maps, aerial photographs, and newspaper articles. A compilation of these maps and photographs is presented in Appendix B.

1890s to Late 1970s

By the late 1890s, the block containing the subject property had been developed with a mix of residential and light industrial properties. The two-lane Bailey Avenue extended north-south within the present-day alignment of S. Shoreline Boulevard; Oak Street extended north and terminated mid-block; and Front Street (present-day W. Evelyn Avenue) extended west and terminated just east of Franklin Street. The Southern Pacific Railroad tracks extended east-west just north of the block, which was advantageously located two blocks east of the railroad depot and bustling commercial corridor extending along Castro Street.

The northern section of the property (abutting the railroad tracks) contained Mrs. S. E. Bubb's grain warehouse and a corral. An orchard extended along the east side of Oak Street. The remainder of the

parcels contained one-story wood stables or detached residences. Several residential properties had rear ancillary structures such a water tank, windmill, and hen house.[2]

By 1904, the Mountain View Fruit Exchange had acquired the grain warehouse, while the rest of the parcels remained largely unchanged.[3] Four years later, the Mountain View Water Works had acquired a parcel abutting Franklin Avenue and had constructed a pump house, an oil tank, and an 85-foot-tall, 100-000-gallon steel water tank on a steel trestle.[4]

In 1915, the San Francisco-based California Supply Company acquired the northeast corner of the block and built a "pickle works" that produced a variety of pickle products (emitting a "pungent aroma" as a by-product) and thousands of gallons of catsup. The company expanded in the 1920s, constructing new warehouses and other infrastructure at the site and employed upward of 300 people, sustaining both its employees and the broader community during the Great Depression. Carl Nielson served as the first superintendent of the pickle works, and his son Arthur Nielson worked at the plant and later became the city's Police Chief.[5]

By the early 1920s, the Growers Packing and Warehousing Association had acquired and expanded the Mountain View Fruit Exchange building located west of the pickle plant. The Mountain View Water Works facility, located south of the pickle plant, expanded with the construction of a new shed. In 1924, the Mountain View Fire Department had repurposed the original Mountain View Water Works building facing Franklin Street, and the water works had relocated to the rear of the property. The large orchard had been redeveloped with two residences and wood and coal storage buildings facing Oak Street and a hay warehouse accessed from Villa Street. The remainder of the block remained residential.[6]

By 1943, the Mountain View Supply Co. had acquired and expanded the pickle and catsup factory extensively, taking over the entire northern portion of the block and constructing a warehouse and numerous pickle vats along the west side of Oak Street. It also erected a separate pickle factory building at the southeast corner of the block (adjacent to the intersection of Villa and Franklin streets). The company would later be acquired by the California Conserving Company and then Hunt Foods (Figure 23).[7] The remainder of the block remained primarily residential.[8]

Figure 23. Hunt Foods Pickle Plant located within the subject property, 1951 (Mountain View Public Library).

In 1963, the Hunt Foods pickle factory was shut down and demolished after being cited for manufacturing contaminated pickle products. The Mountain View Water Works and Fire Department buildings had also been demolished. Three residences remained along the east side of Oak Street, with additional residences located at the southeast corner of the block. In 1968, Baily Avenue was widened and renamed Shoreline Boulevard; residences lining Baily Avenue were demolished, and a vibrant Mexican American community located north of the subject property was displaced.[9] Over the next decade, the block remained the same, except for the extension of Front Street (W. Evelyn Avenue) west to S. Shoreline Boulevard, and the extension of Oak Street north to Front Street (W. Evelyn Avenue).[10]

Late 1970s to Present

In 1977, the City of Mountain View announced it would build the approximate $4 million Mountain View Police Services - Fire Administration Building within a large parcel formed by consolidating the vacant pickle works and Mountain View Water Works/Fire Department properties and the three remaining residences along the east side of Oak Street (Figure 24). The selected site was also located kitty-corner from the main fire and police stations constructed in 1952.[11] The city retained the prominent architecture firm Goodwin B. Steinberg Associates to design the building, which blended white concrete slump stone block walls and clay tile roofs that evoked Spanish Colonial Revival architecture of the early twentieth century; multi-directional shed roofs, clerestory windows, and boxed enframement around windows and entrances characteristic of Shed architecture of the 1970s; and active and passive solar

technology developed in response to the 1970s energy crisis. An overview of the architecture firm and the building's design and construction is presented in Section 4.[12]

Figure 24. Aerial photograph, 1974; the approximately boundary of the subject property delineated in red (USGS EarthExplorer, amended).[13]

Shortly after the project was announced, the three houses remaining within the project footprint were placed for sale at auction. The oldest house at 149 Oak Street was estimated to have been constructed ca. 1885-1895 and was described as being in poor condition. The other two houses at 161 Oak Street (built ca. 1910-1915) and 1098 Villa Street (built ca. 1920) were noted as being in better condition. It is unknown if the houses were purchased and relocated or demolished.[14]

After principal architect Goodwin Steinberg revised the design due to budget cuts, including eliminating the solar cooling technology and an emergency generator building and fueling station, the city approved the final design of the Mountain View Police Services - Fire Administration Building and retained the Santa Clara-based Vassar Construction Co. as the contractor. The new facility, which included the main building, sign and flagpole, landscaping, and parking lots, was dedicated in March 1980.

In 1984, several features that had been eliminated from the proposed plans were completed. A concrete pad to support an emergency generator and a 1,000-gallon underground storage tank were constructed at the location of the proposed emergency generator building.[15] The concrete staircase and lower-story patio were constructed at east end of the south façade. The architecture firm Spencer Associates

oversaw this addition, which was based on the original design proposed by Goodwin B. Steinberg Associates.[16] In conjunction with the project, the City of Mountain View Public Works Department rebuilt the entry patio in-kind.[17]

Based on a review of drawings and plans provided by the city and visual observation during the site visit, the subject property has undergone minimal alterations over the next four decades. Exterior alterations include the following:

- In 1988, the solar panels on the roof were removed and replaced with clay tiles. Existing clay tiles were repaired as needed.[18]
- In 1994, three sets of exterior stairs were replaced with a similar design; one staircase is located at the northern end of the west façade and the other two staircases are located at the north and south ends of the east façade.[19]
- In 1997, the parking lot was extended to the north.[20]
- In 2010, the emergency generator system located at the northeast corner of the building was replaced.[21]
- In 2014, the courtyard at main story on the west façade (above the extant lower story courtyard) was infilled with a new room, and the tile covering the entry plaza was replaced with a concrete slab. HMC Architects designed the in-fill project.[22]

4. HISTORIC CONTEXT

The following historic context provides an overview of the settlement of Mountain View, the establishment of the Mountain View Police and Fire Departments, and the design and construction of the Mountain View Police Services - Fire Administration Building in the late 1970s.

Settlement of Mountain View

From the mid- to late nineteenth century, Mountain View evolved into a bustling community within the broader Santa Clara Valley. In the early 1850s, a small settlement with a hotel, saloon, post office, grocery store, and other amenities developed around a stagecoach stop on the nine-hour journey between San Francisco and San Jose. The stagecoach stop was located near the intersection of El

Camino Real and Stevens Creek (around one mile south of the subject property). An early resident Jacob Shumway reportedly named the settlement for the views of the nearby Santa Cruz Mountains. In 1864, the San Francisco and San Jose Railroad (later absorbed by the Southern Pacific Railroad) laid its tracks parallel to El Camino Real, bypassing the initial village, which became known as Old Mountain View. A commercial district and adjacent residential neighborhoods developed around the new railroad depot at Castro Street (located two blocks east of the subject property) and became known as New Mountain View (Figure 25). The two communities later expanded and merged into a shipping center for locally produced wine, grain, fruit, and lumber.[23]

In 1902, Mountain View incorporated, with the subject property located within the official boundary, which extended from the railroad tracks south to El Camino Real and from Calderon and Montgomery streets west to Pettis Avenue. In the decades that followed, the city underwent tremendous growth with the installation of electrical and telephone lines and street signs; the establishment of a library, newspaper, and municipal water system; and the development of new businesses along Castro Street. Its population increased in tandem, with a large influx of residents arriving when the Pacific Press Publishing Association, the publishing arm of the Seventh Day Adventist Church, built a press on Villa Street in 1904. Approximately one hundred Seventh Day Adventist families settled along Pettis and Lantham streets in close proximity to the press. By the late 1920s, Mountain View's boundary had extended north to Jackson Street, east to Calderon Avenue, south to El Camino Real, and west to Chiquita Avenue, and it contained several ethnic neighborhoods, including Chinese and Japanese enclaves near Villa and View streets and a Mexican community north of the railroad tracks.[24]

The California Supply Company pickle plant, which was constructed in 1915 within the subject property, expanded alongside the proliferation of orchards and canneries in Mountain View and broader region in the early twentieth century. Numerous canneries were established in the valley to process the excess of locally grown fruit and to meet the demand for canned fruits and vegetables during World War I and II. Other nearby canneries in Mountain View included the Sanguinetti Cannery (later acquired by the Richmond Chase Canning Company) that employed upward of 400 people at its plant at Bailey Avenue (present-day Shoreline Boulevard) and the railroad tracks. Following World War II, Mountain View and the broader valley underwent prolific growth, with the city's population swelling from 6,500 residents in 1950 to 31,000 residents in 1960. In the postwar era, the city was transformed through the construction of industrial parks, apartments, and large tracts of single-family homes, and its boundary expanded as the city annexed adjacent neighborhoods. During this decade, nearby Moffat Field and Ames Laboratories employed thousands of people and overtook the canneries as the local economic drivers, although the Pacific Press Publishing, Hunt Foods (until the pickle plant closed in 1963), Teasdale Packing Company, and Gemello Winery remained prominent businesses.[26]

Mountain View Police & Fire Departments

Formed shortly after the city incorporated, the Mountain View Police Department, which consisted of two officers, operated from a room inside City Hall for the next four decades. The department grew slowly, acquiring its first police car in 1929 and expanding to four officers serving under Police Chief Art Excel by 1940. It received two-way radios in 1948 and installed police call boxes on Castro Street in 1952. That year Arthur Nielson, the son of the pickle plant manager who joined the force in 1941, was promoted to Police Chief and steered the department through substantial growth over the next two decades before retiring in 1971.[27]

The Mountain View Fire Department followed a similar trajectory as the Police Department. Established in 1874, a volunteer fire department initially protected the community with one single fire engine until a series of destructive fires in the 1920s stressed the need for a fully staffed department with sufficient equipment. In 1924, the Fire Department moved to a repurposed building in the Mountain View Water Works facility on Franklin Street (within the subject property), and it would expand to include five firefighters, assisted by nearly thirty volunteers, and a half dozen fire trucks (Figure 26). The volunteer firefighters eventually disbanded in 1964.[28]

Figure 26. Mountain View Fire Station on Franklin Street (within the subject property), 1950 (Mountain View Public Library).

In 1951, Mountain View voters passed $225,000 in bonds to construct new police and fire stations at the southeast corner of Franklin and Villa streets. The San Jose-based architecture firm Higgins and Root designed the buildings (Figure 27). Completed in 1952, the new police headquarters included offices, police cells, a courtroom, and judge's chambers. When the main fire station was completed the following year, the department moved from the Water Works property to its new station fronting Villa Street.[29]

[30] "Proposed Civic Center Unit," *Daily Palo Alto Times*, May 2, 1951.

By the 1970s, however, the police station at the southeast corner of Villa and Franklin streets was regarded as outdated and cramped, and in 1977, the City of Mountain View announced it would fund an approximate $4 million Mountain View Police Services - Fire Administration Building, in part paid with capital improvement bonds.[31] The design and construction of the police and fire headquarters building, however, would be overshadowed by bitter and protracted labor disputes between the city and the Police and Fire Departments that began in the mid-1970s and continued through the early 1980s.

Beginning in the mid-1970s, the Mountain View Fire Firefighters, represented by its union Firefighters Local 1965, and city officials engaged in a years-long, bitter dispute over the terms of salary increases and an updated retirement plan. Over the next several years, firefighters staged several pickets outside City Hall and a thirty-nine-day strike that lasted from July to August 1980.[32] The labor disputes continued the following year, with a one-year contract finally signed in mid-1981. By mid-1983, both sides withdrew their respective lawsuits and reached an agreement over damages caused during the strike.[33]

The Mountain View Police Department, represented by the Police Officers' Association, also began advocating for increased salaries, arguing that low wages resulted in high turnover and low morale in the department. Police officers obtained a salary increase in late 1977, although they continued to advocate for additional raises and a retirement plan through 1980, staging pickets at City Hall and a sickout but not a strike.[34]

Goodwin B. Steinberg & Associates

In 1977 amidst labor negotiations with the Police and Fire Departments, the City of Mountain View retained the prominent Silicon Valley architecture firm Goodwin B. Steinberg & Associates to design the Mountain View Police Services - Fire Administration Building. Goodwin B. Steinberg served as the principal architect and collaborated with a team of architects, including Pete Dalton and Karl Coombs, on the building's design.[35]

Goodwin (Goody) B. Steinberg (1922-2010) was born in Chicago, Illinois, to Edward P. and Anna Steinberg. He gained his first exposure to architecture helping his father, a Chicago-based architect, design a cemetery as a young boy. After high school, Goodwin Steinberg initially enrolled at Illinois Institute of Technology but felt stifled by the program director Ludwig Mies van der Rohe's trademark

International Style and top-down teaching method. Preferring to design buildings that reflected their site and regional context, Steinberg transferred to the University of Illinois, graduating with an architecture degree.[36]

In 1944, he married Geraldine (Gerry) Tabin (1925-2021), served in the U.S. Air Force during World War II, and visited the San Francisco Bay Area while stationed at Hamilton Air Force Base in Marin County. In 1952, he returned to the San Francisco Bay Area and settled with his wife and two children in Los Alto Hills. The Steinbergs raised three children: Joan Steinberg Laurence, Thomas Steinberg, and Robert (Rob) Steinberg, who became a noted architect and successor to his father's firm.[37]

In 1953, Goodwin Steinberg founded his namesake architecture firm and achieved remarkable success in the wake of the region's significant postwar growth and transformation into Silicon Valley. Over the course of his fifty-year career, he estimated he had designed thousands of projects, ranging from single-residences, apartment buildings, houses of worship, industrial parks, and civic, corporate, and educational buildings. He notably designed upward of 700 custom homes and several hundred tract homes. Architectural critic Dave Weinstein states that Steinberg's signature residential designs include full-height windows and skylights to maximize interior lighting, fireplaces as focal points, extensive use of stone and wood, and long, linear profiles that complement the surrounding site.[38]

A sampling of large-scale projects that Steinberg highlights in his book *From the Ground Up* include:

- Los Altos Chamber of Commerce, ca. 1962
- Congregation Beth Am, ca. 1960, with an expansion in 1999 by his son Rob Steinberg, Los Altos Hills
- Rolm Corporation Campus, early 1980s, San Jose, CA
- Milpitas Civic Center, ca. 1982
- Cupertino Community Center, ca. 1986
- SCI Manufacturing Corporation, date unknown, San Jose, CA
- San Ramon Civic Center, ca. 1988
- Guided Learning Center, Cupertino Unified School District, ca. 1988
- Careny Science Center, Bellarmine College Preparatory, 1988, San Jose, CA
- Tech Museum of Innovation, 1998, San Jose, CA
- Santa Clara County Children's Center (now The Harker School), San Jose, 1999
- Stanford University campus, various buildings
- Los Altos History Museum, 2001[39]

[39] Steinberg and Wolfe, *From the Ground Up*; "Goodwin B. Steinberg (Architect)," *Pacific Coast Architecture Database*, accessed May 15, 2023, https://pcad.lib.washington.edu/person/5940/.

In contrast to prevailing postwar office designs, which typically featured rectangular buildings with rigid interior floorplans, Steinberg preferred to design office and civic buildings with that conveyed openness within campus-like settings. In particular, he highlights his design for the ROLM Corporation campus, completed in the early 1980s in San Jose, as including four buildings nestled within green belts, waterfalls, and ponds that created an indoor-outdoor connection and "an ambiance conducive to interaction, interdependence, and integration" (Figure 28).[40] He placed the parking lots around the perimeter of the buildings, preserving the remainder of the site for landscaping.[41]

Figure 28. Rolm Corporation campus, undated photograph; note the similar use of a large opening with crossbeam supports and soaring shed roof as a focal point (Goodwin Steinberg).[42]

In addition to new designs, Goodwin Steinberg worked on several historic preservation projects, including the incorporation of stained glass windows and other important components when rebuilding the First Presbyterian Church of San Jose in 1972. In the 1980s, he worked on the restoration of the Fremont and Cora Older House, built in 1912 in Saratoga, and the rehabilitation of the 1868 Santa Clara County Courthouse following the 1989 Loma Prieta earthquake. He also played in a key role in the creation of the Guadalupe River Parkway in San Jose.[43]

Throughout his storied career, Goodwin Steinberg honed his design philosophy, which emphasized closely collaborating with clients, landscape architects, and builders to design buildings that reflected the surrounding community. He counted the Mountain View Police Services - Fire Administration Building among his signature projects that reflected this philosophy, stating:

> My work on the Tech Museum, the county courthouse, the Mountain View police and fire administration building, and other civic projects helped me to feel that I was a contributing

> member of my community, bringing my professional expertise to a region in which my family and other families could flourish. I believe that an architect can find greater personal fulfillment and a better quality of life by concentrating his work in a community rather than diluting himself with major projects over great distances.[44]

In 1992, his son Rob Steinberg became the president of the firm, which became known as the Steinberg Group, and he has grown the firm, presently known as Steinberg Hart, to include offices throughout California and in New York, Texas, and Shanghai, China. Prior to his death in 2010, Goodwin Steinberg was elevated to the American Institute of Architects Fellows, the highest honor for exceptional contributions to the architecture field.[45]

Architectural Design

Goodwin Steinberg's design for the Mountain View Police Services - Fire Administration Building incorporated many of his signature elements for large-scale buildings. The building is situated within extensive landscaping at the southeast corner of the parcel. The main façade is one story in height and located at grade with a large entry plaza designed to provide an "open feeling inviting community involvement."[46] The lower story is partially embedded in the sloped terrain of the site, allowing the majority of the parking to be located to the rear and below-grade, thus obscured from view when approaching the main entrance. The site's topography also allows the north façade to expand to two stories in height, with wide expanses of skylights across the main story and day-to-day police and mechanical operations to occur at the lower story.[47]

Functionally, Steinberg located offices, interview rooms, records storage, a library, public reception areas, and a public meeting hall for the police department and offices for the fire department at the main story. The northern section of the lower story was designed to house additional offices, interview rooms, storage for evidence and stolen property, and covered parking for the police department. The majority of fire department operations and equipment remained at the 1952 fire station across the street.[48]

A 1977 newspaper article characterized the building's style as a "mix [of] old Spanish architecture ideas with modern space-age concepts for energy savings."[49] Indeed, Steinberg blended elements of early twentieth century Spanish Colonial Revival architecture with aspects of the popular 1970s Shed architecture. As described previously, the use of white painted concrete slump stone blocks, clay tile roofs, and the soaring clock tower evoke Spanish Colonial Revival architecture that developed in California and spread nationwide from 1915 to 1940 (Figure 29). The steel supports at the north façade were deliberately painted bright blue to add a pop of color against the expanses of white walls.[50]

In comparison, the multi-directional shed roofs, elongated and clerestory windows, and boxed enframement around windows and entrances are characteristic of Shed architecture, a popular style from the mid-1960s to mid-1980s. This architectural style evolved from Sea Ranch, a planned community dating to the early 1960s along the northern coast of California. The first residences constructed at Sea Ranch employed box-like forms, unpainted wood cladding, and multi-directional shed roofs, drawing inspiration from barns and other vernacular structures. The style spread nationwide, emphasizing geometric volumes and forms, asymmetrically located windows as the primary exterior ornamentation, and the extensive use of clerestory windows to provide natural lighting as a form of passive solar design. The primary design features of Shed architecture include:

- One to one-and-one-half story height
- Multi-directional, shed roof forms with no overhang
- Continuous wood cladding (boards or shingles), occasionally with sections of brick veneer
- Window variations as the primary source of exterior detail
- Large plate glass windows set flush with walls
- Clerestory windows located above lower roof forms
- Boxed enframement around windows or window groupings
- Deep box bay windows
- Recessed entrances[52]

Solar Technology

The first wave of experimentation with solar technology in residential architecture began in the late 1930s. It included orienting buildings toward the south, installing extensive glazing to capture sunlight for lighting and heating, and installing prototype solar panels on roofs. The technology proved to be cost prohibitive and would be eclipsed by an increase in the production of oil, coal, and natural gas. By the end of the 1950s, interest in solar powered residential architecture had waned.[53]

[51] Drawing included in Goodwin B. Steinberg Associates, "Mountain View Police & Fire Facility, Job 944," as-built drawing set dated March 30, 1978, revised July 7, 1978, on file at the City of Mountain View.

In 1973, the Organization of Petroleum Exporting Countries (OPEC) imposed an embargo on oil exports to the United States and several other countries in retaliation for their support for Israel during the Arab-Israeli War (or Yom Kippur War). A second oil crisis occurred in 1979 when oil production dropped during the Iranian Revolution. During this decade, the price of oil soared as supplies dwindled, causing rationing, long lines at gas stations, public campaigns to lower thermostats, and reduced hours at schools and offices. The oil crisis also led to renewed experimentation and government funding for solar technology to improve the energy efficiency of buildings of all types.[54]

While designing the Mountain View Police Services - Fire Administration Building, Goodwin Steinberg and his associates studied solar technology installed at the Santa Clara Community Recreation Center and at unspecified buildings in Georgia and Arizona. In 1977, the Santa Clara Community Recreation Center was constructed within the city's 52-acre Central Park (Figure 30). According to newspaper coverage, the building featured new solar cell technology that produced electricity for direct consumption rather than heating hot water. The rooftop solar energy system had been designed by the Lockheed Palo Alto Research Laboratory to provide 80 percent of the building's heating and 30 percent of its cooling needs. The Department of Energy provided two-thirds of the funding for the $1 million solar heating and cooling system as a demonstration project. The custom-designed system was lauded as the "first large solar-heated and cooled buildings in the world and the only one of its kind in the American West."[55] Vice President Walter Mondale and Governor Jerry Brown attended the building's dedication in March 1980. In his remarks, Vice President Mondale emphasized the Carter's administration commitment to developing renewable energy sources to address the nation's energy crisis.[56]

In addition to its distinctive, blended architectural style, Goodwin Steinberg integrated up-to-date technology for active and passive solar heating and cooling in the design for the Mountain View Police Services - Fire Administration Building. He placed approximately 250 three-foot by eight-foot solar collectors on southern-facing roof slopes. A form of active solar technology, solar collectors had air or water pipes enclosed with a piece of glass on the top and with a panel with an opaque black surface on the bottom. The sun heated the air or water pipes inside the collectors. At the Mountain View building, water heated in the rooftop solar collectors was conveyed to a storage tank designed to keep the water warm for several days. It was intended to provide hot water for the building and up to 70 percent of its annual heating needs and 40 percent of its annual cooling needs. The building design initially included a solar cooling system that was eliminated due to budget cuts.[57]

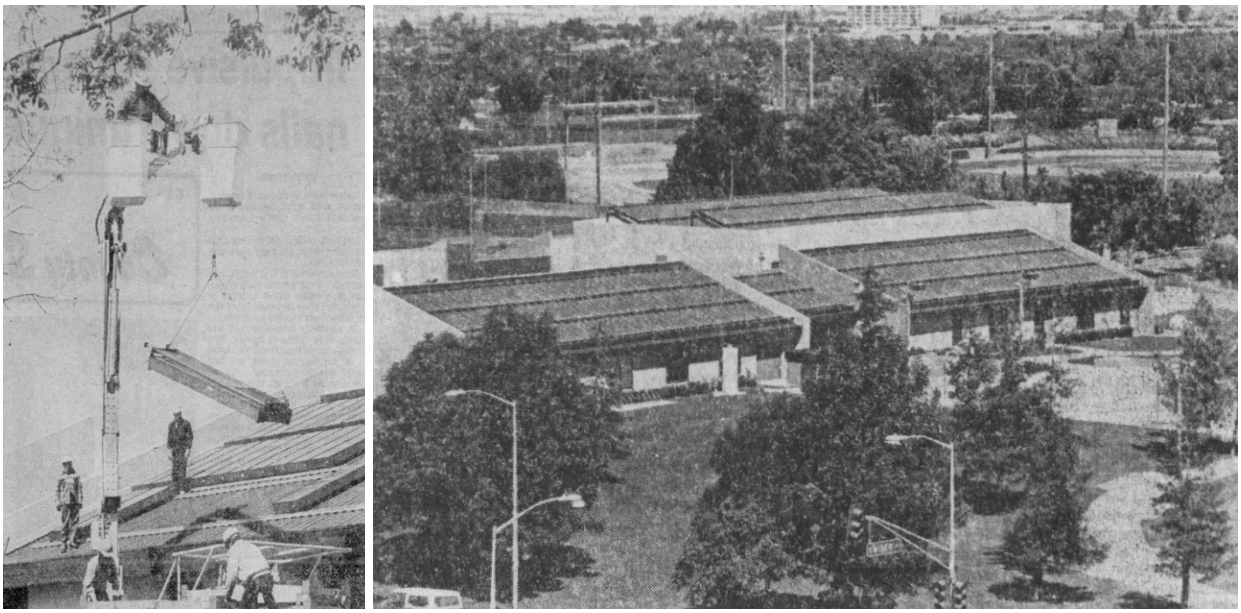

Figure 30. Installation of "solar collectors" installed on the roof of the Santa Clara Community Recreation Center, 1976, left, and photograph of the completed building, 1979, right (Newspapers.com).[58]

By contrast, passive solar systems relied on simple, low-cost design features including building orientation; the size and location of windows and shading to capture heat in the winter and repel it in the summer; the use of brick, stone, or concrete construction material and wall thickness to store heat during the day and release it at night.[59] Passive solar design features at the Mountain View building include large skylights on the roof, clerestory windows at the roofline of north facing walls, and wide expanses of angled skylights set within beveled openings across the north façade that would illuminate interior offices, reducing the number of days that required interior lighting. Narrow windows across the east, south, and west façades were designed to minimize light and heat entering the building.[60]

In 1978, the building's design won an honorable mention in the government building category in the Owens-Corning Fiberglas Corp's prestigious national Energy Conservation Awards Program. It was also highlighted as a notable building in the January 1979 edition of *Architectural Record*.[61]

Building Completion

After receiving initial construction bids that were $1 million overbudget, the City of Mountain View faced public pressure to eliminate the solar heating and cooling technology from the Mountain View Police Services - Fire Administration Building. City staff worked with Goodwin Steinberg to eliminate several features, including exercise rooms with saunas, a pneumatic tube system, a magnetic card key

system, the generator building and fueling station, and ultimately the solar cooling system. Solar heating was retained because the city felt it would recoup the costs within two decades of operation.[62]

The Mountain View Police Services - Fire Administration Building was dedicated in March 1980, with Police Chief Robert K. Schatz and Fire Chief Robert B. Burns in attendance. Burns was promoted to Fire Chief in 1976, after serving for fourteen years with the department, and retired in 1982.[63] Robert K. Schatz became a city police officer in 1950 and served as the Police Chief from 1971 to 1984; he then served for eleven years on the city council. He passed away in 1997, and the building renamed in his honor in 2004.[64]

Over the next decade, the building underwent several modifications. As stated previously, an emergency generator was installed at the northeast corner of the building, and the staircase and lower-story patio were installed at the east end of the south façade. Most notably, the rooftop solar collectors were removed and replaced with clay tiles, signaling the end of the building's experimental solar technology.[65] Despite these alterations, the building remains true to Goodwin Steinberg's late 1970s architectural design.

5. EVALUATION

The following section provides an overview of the California Register of Historical Resources (California Register) and evaluation of the subject property for listing in the California Register.

EVALUATIVE FRAMEWORK

California Register of Historical Resources

The California Register is the authoritative guide to the state's significant historical and archeological resources. The California Register program encourages public recognition and protection of resources of architectural, historical, archeological and cultural significance, identifies historical resources for state and local planning purposes, determines eligibility for state historic preservation grant funding and affords certain protections under CEQA.[66]

[65] Summarized from sets of drawings listed in the bibliography.

[66] Excerpted from California Office of Historic Preservation, "California Register of Historical Resources," accessed April 24, 2023, https://ohp.parks.ca.gov/?page_id=21238; California Office of Historic Preservation, "California Register and National Register: A Comparison (for purposes of determining eligibility for the California Register," Technical Assistance Series #6, 2011, accessed April 24, 2023 https://ohp.parks.ca.gov/pages/1069/files/technical%20assistance%20bulletin%206%202011%20update.pdf; California Office of Historic Preservation, "California Register of Historical Resources: Questions and Answers," Technical Assistance Series #3, 2002, accessed April 24, 2023, https://ohp.parks.ca.gov/pages/1069/files/03%20cal_%20reg_%20q_and_a.pdf.

Criteria
A historical resource must be significant at the local, state, or national level, under one or more of the following four criteria:

- **Criterion 1.** It is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States; or

- **Criterion 2.** It is associated with the lives of persons important to local, California, or national history; or

- **Criterion 3.** It embodies the distinctive characteristics of a type, period, region, or method or construction, or represents the work of a master, or possesses high artistic values; or

- **Criterion 4.** It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

Special Considerations for Historical Resources Achieving Significance within the Past Fifty Years
In order to understand the historic importance of a resource, sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. A resource less than fifty years old may be considered for listing in the California Register if it can be demonstrated that sufficient time has passed to understand its historical importance.[67]

Period of Significance
Period of significance is the length of time when a property was associated with important events, activities, or persons or it attained its principal design characteristics. Period of significance usually begins with the date when significant activities or events began giving the property its historic significance; this is often a date of construction.[68]

Integrity
Integrity is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Historical resources eligible for listing in the California Register must meet one of the criteria of significance described above and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Historical resources that have been rehabilitated or restored may be evaluated for listing. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. It must also be judged with reference to the particular criteria under which a resource is proposed for eligibility. Alterations over time to a resource or historic changes in its use may themselves have historical, cultural, or architectural significance.

It is possible that historical resources may not retain sufficient integrity to meet the criteria for listing in the National Register, but they may still be eligible for listing in the California Register. A resource that

[67] Excerpted from California Office of Historic Preservation, "California Register and National Register: A Comparison."
[68] Excerpted from National Park Service, "How to Complete the National Register Registration Form," National Register Bulletin #16A, 1997, accessed April 24, 2023, https://www.nps.gov/subjects/nationalregister/upload/NRB16A-Complete.pdf.

has lost its historic character or appearance may still have sufficient integrity for the California Register if it maintains the potential to yield significant scientific or historical information or specific data.[69]

The seven aspects of integrity are defined as follows:

- **Location** is the place where the historic property was constructed or the place where the historic event occurred.
- **Design** is the combination of elements that create the form, plan, space, structure, and style of a property.
- **Setting** is the physical environment of a historic property.
- **Materials** are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.
- **Workmanship** is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.
- **Feeling** is a property's expression of the aesthetic or historic sense of a particular period of time.
- **Association** is the direct link between an important historic event or person and a historic property.[70]

Character-defining Features
A character-defining feature is an aspect of a property's design or construction that conveys its architectural style, function, or type. Character-defining features can include building systems, construction material, ornamentation, massing, craftsmanship, site features, and landscaping that date to the period of significance. A historic resource must retain the majority of its character-defining features to convey its significance and to maintain integrity.[71]

CALIFORNIA REGISTER EVALUATION

Based on the evaluation under the four criteria below, the Mountain View Police Services - Fire Administration Building is recommended as eligible for listing in the California Register under Criterion 3 as the work of master architect Goodwin Steinberg.

California Register Criterion 1 (Events)

By the time the Mountain View Police Services - Fire Administration Building was completed in 1980, the block and surrounding neighborhood had already been developed with a mix of residential, commercial, and light industrial buildings for nearly a century. Similarly, the building was the third iteration of Police and Fire Department buildings in the immediate area, including the fire station completed along Franklin Street in 1924, and the police and fire stations constructed at the intersection

[69] California Office of Historic Preservation, "California Register and National Register."
[70] National Park Service, "How to Apply the National Register Criteria for Evaluation," National Register Bulletin #15, 1997, accessed April 24, 2023, https://www.nps.gov/subjects/nationalregister/upload/NRB-15_web508.pdf.
[71] Lee H. Nelson, "Architectural Character: Identifying the Visual Aspects of Historic Buildings as an Aid to Preserving their Character," Preservation Brief #17, accessed April 24, 2023, https://www.nps.gov/orgs/1739/upload/preservation-brief-17-architectural-character.pdf.

of Franklin and Villa streets in the early 1950s. Furthermore, the design and construction of the building from 1977 to 1980 was overshadowed by protracted labor negotiations between the city and Police and Fire Departments, culminating with a contentious thirty-nine-day strike by the Mountain View Fire Department in mid-1980. As such, the Mountain View Police Services - Fire Administration Building did not play a significant role in the history of the Police and Fire Departments and the expansion of municipal facilities in the City of Mountain View in the late twentieth century, and it did not spur new development in the surrounding area. Therefore, the building is recommended as ineligible for listing in the California Register under Criterion 1.

California Register Criterion 2 (People)

A wide array of city staff have worked at the Mountain View Police Services - Fire Administration Building since it opened in 1980. None are known to have made significant contributions to local, state, or national history. While Police Chief Robert K. Schatz and Fire Chief Robert B. Burns held key positions in their respective departments when the building was dedicated, their leadership does not rise to a level of significance under this criteria. Thus, the subject property is recommended as ineligible for listing in the California Register under Criterion 2.

California Register Criterion 3 (Design/Construction)

Architect Goodwin Steinberg is recognized as a master architect, and the Mountain View Police Services - Fire Administration Building is a representative example of the large-scale civic projects that he designed during his fifty-year career with his namesake firm. The building skillfully blends Shed architecture, expressed in the soaring multi-directional shed roofs and varied fenestration, with elements of regional Spanish Colonial Revival architecture, including the white painted slump stone brick walls and clay tile roofing that soften the building's angularity. The prominent clock tower further evokes mission-era bell towers. The incorporation of a broad entry plaza, extensive vegetation, and subtle transitions in the site's topography reflect his intent to create an inviting, open building within a campus-like setting. Furthermore, he integrated experimental active and passive solar technology in the building's design, that, while ultimately not successful, were nationally recognized as critical to addressing the 1970s energy crisis. The building's design would subsequently be featured in *Architectural Record*. Although it is less than fifty years old, the building meets the threshold for special consideration for listing in the California Register because a sufficient amount of time has passed to understand Steinberg's exemplary career and the history and significance of Shed architecture and experimental solar technology of that era. As such, the subject property is recommended as eligible for listing under Criterion 3 as the work of master architect Goodwin Steinberg.

California Register Criterion 4 (Information Potential)

While Criterion 4 is generally applied to archaeological resources, it can be used to identify buildings with significant construction methods and other related physical information. The subject property is recommended as ineligible for listing in the California Register under this criterion because the experimental solar technology was removed from the building in the late 1980s. The majority of the building's construction material, including the concrete slump blocks, fenestration, and clay tile roofing, do not themselves embody important physical information.

PERIOD OF SIGNIFICANCE

The period of significance for the subject property is 1980, corresponding with the year it was constructed, because its significance stems from its association with an architect of distinction and its architectural design.

INTEGRITY ANALYSIS

The Mountain View Police Services - Fire Administration Building retains integrity of location and setting as it remains in its original location and orientation toward the intersection of Franklin and Villa streets. It also remains surrounded by the majority of the single-family residences and commercial buildings in place when the building was completed in 1980. The removal of the solar technology in the late 1980s and other minor exterior alterations, including the replacement of select exterior staircases, the addition of a small room on the west façade, and the removal of the tile at the entry plaza, have not impacted the original design, materials, and workmanship. The subject property displays integrity of feeling and association through its intact Shed architecture and its continued use as the police and fire department headquarters. Thus, it retains integrity of feeling and association.

CHARACTER-DEFINING FEATURES

The character-defining features of the subject property include:

- One- and two-story height accommodating the topography
- Orientation southeast toward the intersection of Franklin and Villa streets
- Irregular footprint formed by wings and projections with varying depths across each façade
- Reinforced concrete slump stone block construction
- Multi-directional shed roofs with varying heights and slopes
- Clay tile roofing
- Entry plaza with main entrance enframed by a shed roof canopy
- Distinctive clock tower on the south façade
- Terraced slump stone block planters
- Fenestration including elongated fixed windows, elongated box bay windows, six-light fixed windows, clerestory windows, and skylights
- Entrances including glazed doors
- Projecting concrete slump stone blocks enframing windows and entrances
- Large openings with steel tube supports and crossbeams and angled skylights across the north façade
- Walkways, balcony, and staircases at the north façade
- Concrete slump stone block sign and flagpole

6. CONCLUSION

Based on the analysis above, the Mountain View Police Services - Fire Administration Building is recommended as eligible for listing in the California Register under Criterion 3 as a significant example of the work of master architect Goodwin Steinberg. The period of significance dates to 1980 when the building was completed, and the property retains its integrity despite the removal of the rooftop solar collectors in the late 1980s. As such, the property qualifies as a historical resource under CEQA.

1. Executive Summary

PlaceWorks has performed a Phase I Environmental Site Assessment (ESA) on behalf of SVA Architects (Client/User) for the Mountain View Public Safety Building Project, located at 1000 Villa Street in the City of Mountain View, Santa Clara County, California (Figures 1 and 2). The project site consists of one developed parcel that is approximately 4.2 acres in size. Currently, the project site consists of one two-story building that houses the City's Police Department, Fire Department administrative staff, Emergency Dispatch (911 call center), and Emergency Operations Center. The site also includes a 42-stall public parking lot, a 100-stall restricted staff parking lot, a pump station, and a K-9 training area. The Phase I ESA was performed in general conformance with the scope and limitations of the ASTM E 1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the "environmental risk" associated with the site, as defined in the ASTM E 1527-21 Standard, and discussed in the Introduction section of this report.

The project site is bounded by W. Evelyn Avenue and the Caltrain Railroad easement to the northeast, Franklin Street to the southeast, Villa Street to the southwest, and Oak Street, residential properties, and S. Shoreline Road to the northwest. (Figure 2 and Figure 3). Figure 1 depicts the regional location of the project site, Figure 2 shows the local vicinity of the project site, and Figure 3 is an aerial photograph showing the current condition of the project site. Regional access to the site is provided by State Route 82, SR-85, and US 101. Local access is provided by W. Evelyn Avenue, Franklin Street, Villa Street, and Oak Street (Figure 3).

The objective of a Phase I ESA is to assess whether "recognized environmental conditions" (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the project site. Our conclusions are intended to help the user evaluate the "business environmental risk" associated with the project site. Our opinion regarding a REC's potential impact on the project site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, and our experience evaluating similar sites.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)

The ASTM E 1527-21 Standard defines a REC as (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a *recognized environmental condition*.

No RECs were identified related to activities on the project site. However, there is the potential for the migration of soil vapors and/or groundwater from the adjacent properties to the east, which were former dry

1. Executive Summary

cleaning facilities, to have impacted the project site, as discussed in detail in Section 4.2.8. Therefore, this is considered a vapor encroachment condition (VEC) on the project site and is also identified as a REC.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)

The ASTM E 1527-21 Standard defines an HREC as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

This Phase I ESA has revealed no evidence of HRECs in connection with the project site.

CONTROLLED RECS ENVIRONMENTAL CONDITIONS

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

"a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous. substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."

This Phase I ESA has revealed no evidence of CRECs in connection with the project site.

VAPOR ENCROACHMENT CONDITION

A vapor encroachment condition (VEC) is defined in ASTM E2600-22 as

"the presence or likely presence of chemicals of concern (COCs) in the vadose zone of the target property caused by the release of vapors from contaminated soil and/or groundwater either on or near the target property."

A VEC was identified due to the possible migration of soil vapors and/or groundwater onto the project site from the adjoining businesses to the east that were formerly occupied by dry cleaning facilities. This represents a REC to the site.

BUSINESS ENVIRONMENTAL RISK

The ASTM E1527-21 Standard include "additional issues" that are non-scope considerations outside of the scope of the ASTM Phase I practice and are defined as "business environmental risk." Issues considered are asbestos-containing materials (ACM), radon, lead-based paint, lead in drinking water, indoor air quality, and mold, among others. Although these items were not included in this Phase I ESA report, some initial observations are made.

1. Executive Summary

Because of the age of the building (1980) and the fact that lead-based paint (LBP) was banned in 1978, the presence of LBP in the building is unlikely. Similarly, results provided in Section 2.3.3 indicate that radon is not likely to be of concern at the project site. Although the use of asbestos in most building materials was banned by 1977, it may be present in some materials, such as drywall joint compound, window glazing, and sheet vinyl flooring up until 1997. Therefore, it is recommended that an asbestos survey be conducted prior to demolition activities.

No business environmental risks were identified at the project site.

SUMMARY

PlaceWorks performed the Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM E 1527-21 for the project site located at 1000 Villa Street in Mountain View, California. In addition, PlaceWorks performed a Vapor Encroachment Screening (VES), as defined by ASTM E2600-22. The following REC was identified:

- The project site may be impacted by soil vapors and/or groundwater due to the migration of dry cleaning chemicals (primarily perchloroethylene – PCE) from the adjacent properties to the east that formerly housed dry cleaning operations.

- Although both off-site facilities have been investigated and remediated to the satisfaction of the Department of Toxic Substances Control (DTSC), the off-site extent of the soil vapor/groundwater plumes to the west (i.e., toward the project site) was never investigated. Subsequent investigation of the adjacent property to the east showed migration of soil vapors onto this property.

Therefore, PlaceWorks recommends that a Phase II ESA be conducted and include a soil vapor survey and groundwater sampling to determine if the project site has been impacted by vapor concentrations and/or groundwater concentrations in excess of DTSC screening levels for commercial land use.

1. Executive Summary

This page intentionally left blank.

2. Introduction

This Phase I Environmental Site Assessment (ESA) was performed in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E 1527-21 Standard for SVA Architects (Client/User) for the Mountain View Public Safety Building Project, located at 1000 Villa Street in the City of Mountain View, Santa Clara County, California (Figures 1, 2, and 3). The Phase I ESA was performed in general conformance with the scope and limitations of the ASTM E 1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and with the EPA "All Appropriate Inquiries" standard. Exceptions to, or deletions from, this practice are described in Section 1 of this report.

The primary purpose for performing a Phase I ESA is to "…permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations (commonly known as landowner liability protections) on Comprehensive Emergency Response Compensation and Liability Act (CERCLA) liability." An environmental site assessment meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition is presumed to be valid under this standard. In order to maintain landowner liability protections, the user also has a "continuing obligation to not interfere with activity and use limitations associated with the property," must take "reasonable steps to prevent releases" and must "comply with legal release reporting obligations." (ASTM 2021)

Our conclusions are intended to help the user evaluate the "environmental risk" associated with the site, as defined in the ASTM E 1527-21 Standard and the United States Environmental Protection Agency (EPA) All Appropriate Inquiry (AAI) standard.

2.1 OBJECTIVE

The primary objective of the Phase I ESA is to evaluate site history, existing observable site conditions, current site use, and current and historic uses of surrounding properties to identify the potential presence of Recognized Environmental Conditions (RECs) in connection with the project site. RECs are defined by ASTM as

> "(1) the presence of any hazardous substances or petroleum products in, on, or at a property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a *recognized environmental condition*."

In addition, the Standard requires the identification of historical RECs (HRECs) and known or suspected environmental conditions in the Phase I report. The standard defines historical RECs as

> "a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by a regulatory authority or authorities, without subjecting the property to any controls (for example, activity and use limitations, or other property use limitations)."

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

> "a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of controls (for example, activity and use limitations, or other property use limitations)."

Although not necessarily required as part of the Phase I ESA, the business environmental risk was also evaluated for the project site. "Business environmental risk" is defined by ASTM as "a risk which can have a material environmental or environmentally-driven financial impact on the business associated with the current or planned use of a parcel of commercial real estate and is not necessarily an issue required to be investigated under ASTM E 1527-21 practice. Consideration of environmental risk issues may involve addressing one or more non-scope considerations."

ASTM Standard D2600-22, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions)* is a guidance document that may be used in conjunction with E1527-21 to assess vapor concerns. A vapor encroachment condition (VEC) is defined as the presence or likely presence of vapors from chemicals of concern (COCs) in the subsurface of a property caused by the release of vapors from contaminated soil and/or groundwater on or near the property. This is addressed in Section 4.2.8 of this Phase I ESA document.

2.2 SITE IDENTIFICATION

The project site is an approximately 4.2-acre site located at 1000 Villa Street in the City of Mountain View, Santa Clara County, California (Figure 1). The project site consists of Assessor Parcel Number (APN) 158-150-027. The project site is currently developed with a two-story building that houses the City's Police Department, Fire Department administrative staff, Emergency Dispatch (911 call center), and Emergency Operations Center. The site also includes a 42-stall public parking lot, a 100-stall restricted staff parking lots, a pump station, and a K-9 training area Figure 2 is a map showing the local vicinity around the project site and Figure 3 is an aerial photograph showing current site conditions.

2.3 DETAILED SCOPE OF SERVICES

PlaceWorks performed the following detailed scope of services to complete our Phase I ESA assessment:

1. Visual observations of site conditions, and of adjoining property use, to evaluate the nature and type of activities that have been or are being conducted at and adjacent to the site, in terms of the potential for release or threat of release of hazardous substances or petroleum products.

2. Review of federal and state environmental database information within the ASTM- specified radii from the project site using a database service to access records. Use of 7.5-minute topographic maps to evaluate the site's physical setting.
3. Review of federal and state environmental files, as necessary, pertaining to the project site and nearby sites with the potential to impact the project site.
4. Review of previous reports (if any) prepared for the project site.
5. Review of historical aerial photographs and topographic maps.
6. Contacts with state and local agencies, as necessary, regarding the site and surrounding properties and structures.
7. Interviews with the Key Site Manager and property tenant representatives (if any).

2.4 NON-SCOPE CONSIDERATIONS

The ASTM E 1527-21 Standard includes the following list of "additional issues" that are non-scope considerations outside of the scope of the ASTM Phase I ESA practice: Asbestos-Containing Materials, Biological Agents, Radon, Lead-Based Paint, Lead in Drinking Water, Wetlands, Regulatory Compliance, Cultural and Historic Risks, Industrial Hygiene, Health and Safety, Ecological Resources, Endangered Species, Indoor Air Quality unrelated to releases of hazardous substances or petroleum products in the environment, and mold.

A limited assessment of the presence of polychlorinated biphenyls (PCBs) is included in the ASTM work scope. Accordingly, the assessment of the presence of PCBs is limited to those potential sources specified in the ASTM E 1527-21 Standard as "electrical or hydraulic equipment known or likely to contain PCBs" to the extent visually and or physically observed or identified from the interview or records review.

2.5 EXCEPTIONS AND DEVIATIONS

PlaceWorks has completed this assessment in substantial conformance with ASTM E 1527-21. In our opinion, there were no exceptions, addition, deviations, or deletions made to the ASTM work scope.

2.6 LIMITATIONS

Our work for this project was performed generally consistent with the ASTM E 1527-21 Standard for Phase I Environmental Site Assessments. Several organizations other than ASTM, such as professional associations (e.g., ASFE and AGWSE) have also developed "guidelines" or "standards" for environmental site assessments. The Phase I ESA presented herein is consistent with the ASTM E 1527-21 Standard, which may vary from the specific "guidelines" or "standards" required by other organizations.

This Report was prepared pursuant to an Agreement between the Client and PlaceWorks. All uses of this Report are subject to, and deemed acceptance of, the conditions and restrictions contained in the Agreement. The observations and conclusions described in this Report are based solely on the Scope of Services provided

2. Introduction

pursuant to the Agreement. PlaceWorks has not performed any additional observations, investigations, studies, or other testing not specified in the Agreement. PlaceWorks shall not be liable for the existence of any condition the discovery of which would have required the performance of services not authorized under the Agreement.

This Report is prepared for the exclusive use of the Client/User in connection with the project site. There are no intended beneficiaries other than the Client/User. PlaceWorks shall owe no duty whatsoever to any other person or entity on account of the Agreement or the Report. Use of this Report by any person or entity other than the Client/User for any purpose whatsoever is expressly forbidden unless such other person or entity obtains written authorization from the Client and from PlaceWorks. Use of this Report by such other person or entity without the written authorization of the Client/User, and PlaceWorks shall be at such other person's or entity's sole risk and shall be without legal exposure or liability to PlaceWorks.

Use of this Report by any person or entity, including by the Client/User, for a purpose other than the site, is expressly prohibited unless such person or entity obtains written authorization from PlaceWorks indicating that the Report is adequate for such other use. Use of this Report by any person or entity for such other purpose without written authorization by PlaceWorks shall be at such person's or entity's sole risk and shall be without legal exposure or liability to PlaceWorks.

This Report reflects site conditions observed and described by records available to PlaceWorks as of the date of report preparation. The passage of time may result in significant changes in site conditions, technology, or economic conditions, which could alter the findings and/or recommendations of the report. Accordingly, the Client/User, and any other party to whom the report is provided recognize and agree that PlaceWorks shall bear no liability for deviations from observed conditions or available records after the time of report preparation. No investigation is thorough enough to absolutely rule out the presence of hazardous materials at a given site. If hazardous conditions have not been identified during the assessment, such a finding should not be construed as a guarantee of the absence of such materials on the Site, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

The findings, conclusions, and recommendations contained in this report are based on site conditions as they existed at the time of our investigation. Our review of documents, lists, databases, and public agency files have been conducted with due diligence. However, our conclusions are based on available information and are subject to constraints imposed by public agencies on review procedures and information retrieval. As a result, PlaceWorks may have been unable to identify potential concerns. PlaceWorks assumes no responsibility for conditions that did not come to our attention despite reasonable care, or for conditions that were not generally recognizable as environmentally unacceptable at the time of this report. Opinions and judgments expressed are based on our understanding and interpretations of currently available regulatory standards and should not be construed as legal opinions or advice.

Use of this Report by any person or entity in violation of the restrictions expressed in this Report shall be deemed and accepted by the user as conclusive evidence that such use and the reliance placed on this Report, or any portions thereof, is unreasonable, and that the user accepts full and exclusive responsibility and liability for any losses, damages or other liability which may result.

3. Site Description

This section describes the site location and ownership of the site as well as other pertinent details.

3.1 NAME OF SITE OWNER

The project site is owned by the City of Mountain View.

3.2 SITE LOCATION MAP

The United States Geological Survey (USGS) topographic map for the site is the Mountain View, California Quadrangle. The USGS topographic map was used as the source for site setting information. The project site is in Santa Clara County at approximately 37.395576 north latitude and -122.081344 west longitude. The project site is in Section 21 of Township 6 South, Range 2 West of the Mount Diablo Base Line and Meridian. Figures 1 through 3 show the location of the project site.

3.3 SITE AND VICINITY DESCRIPTION

The project site is approximately 4.2-acres in the City of Mountain View. Figure 3 is an aerial photograph showing the current site conditions. The site includes one two-story building that houses the City's Police Department, Fire Department administrative staff, Emergency Dispatch (911 call center), and Emergency Operations Center. The site also includes a 42-stall public parking lot, a 100-stall restricted staff parking lot, a pump station, and a K-9 training area. The project site is in an area with residential, commercial, and institutional land uses.

3.4 PHYSICAL SETTING

Subsurface explorations were not performed for this evaluation; therefore, site geology and hydrology were evaluated on the basis of readily available public information or references, and/or based upon our experience and understanding of subsurface conditions in the project site property area.

3.4.1 Topography

Topographically, the property slopes slightly to the northwest. Based on a review of the USGS 7.5-minute Topographic Series, Mountain View, California Quadrangle Map (USGS 2021), surface elevation of the project site is approximately 70-feet above mean sea level.

3.4.2 Geologic Information

The project site is within the Coast Range Geomorphic Province of Northern California. This geomorphic province is characterized by northwest-southeast trending ranges of low mountains and valleys. The region's

northwest tending folds and faults are a result of colliding plate boundaries making the region seismically active. The regional basins now occupied by San Pablo and San Francisco Bays, and the Santa Clara Valley, were formed by related tectonic processes during Pleistocene time.

The predominant structural feature in the California Coast Ranges is the San Andreas fault zone, which is the structural boundary between two tectonic plates: the Pacific Plate west of the San Andreas fault zone and the North American Plate east of the fault zone. The Hayward and Calaveras faults, located on the east side of the San Francisco Bay and the west side of the Mt. Hamilton-Mt. Diablo Range, respectively, are interpreted to be part of the San Andreas fault system. No active faults are known to have been mapped within a half mile radius of the project site. Based on a review of the California Department of Conservation Earthquake Zones of Required Investigation map, the project site parcels are not within an Earthquake Fault Zone (DOC 2024).

The United States Department of Agriculture (USDA), Natural Resources Conservation Services' Web Soil Survey maps the soil beneath the project site as Urbanland-Campbell complex. The upper layer of soil is classified as a silt loam that is moderately well drained and is classified as Hydrologic Soil Group C (USDA, 2024). Soil borings advanced at the adjacent property to the east encountered silty sand to a depth of 10 feet below ground surface (bgs), which would be conducive to soil vapor migration (Trinity Consultants, 2019).

3.4.3 Naturally Occurring Asbestos Containing Minerals and Radon Gas

Based on a review of A General Location Guide for Ultramafic Rocks in California – Areas More Likely to Contain Naturally Occurring Asbestos (Department of Conservation, Division of Mines and Geology 2000) Van Gosen and Clinkenbeard (2011),and the Geologic Map of the Palo Alto and Mountain View Quadrangle (Santa Barbara Museum of Natural History, 2007), the site is located about 9.3 miles southeast from an area mapped as containing serpentine rock, which typically contains veins of naturally occurring asbestos (NOA).

The Indoor Radon Abatement Act of 1988 directs the United States Environmental Protection Agency to identify and lists areas of the United States with the potential for elevated indoor radon levels. The U.S. EPA's Map of Radon Zones assigns one of three zones based on radon potential:

- **Zone 1** counties have a predicted average indoor radon screening level greater than 4 pico curies per liter (pCi/L)
- **Zone 2** counties with a predicted average indoor radon screening level between 2 and 4 pCi/L
- **Zone 3** counties with a predicted average indoor radon screening level less than 2 pCi/L

The EDR GeoCheck report indicates that the site is within Zone 2, which is below the level of concern (Appendix C). The California Department of Health Services (CDHS) recommends action to be taken to reduce radon levels inside buildings if they are 4 pCi/L or greater. In addition, the CDHS states that there were 14 tests reported to CDHS in zip code 94041 with a maximum concentration of 1.6 pCi/L and no results $\geq$ 4 pCi/L (CDHS, 2024).

3.4.4 Groundwater and Surface Water Information

Based on the California Department of Water Resources (2024), the project site is situated in the Santa Clara subbasin of the Santa Clara Valley Groundwater Basin. The Santa Clara subbasin consists of alluvial materials that underlie the Santa Clara Valley in northern Santa Clara County. The Santa Clara subbasin occupies a structural trough parallel to the northwest trending Coast Ranges. The Diablo Range forms the eastern boundary and the Santa Cruz Mountains form the western boundary. It extends from the northern border of Santa Clara County to the groundwater divide near the town of Morgan Hill (Department of Water Resources, 2006). Hydrogeological investigations were not performed on the site for this investigation; therefore, it is unknown to what extent localized variations in groundwater direction and flow occur on the site. However, subsurface investigations at the adjacent property to the east indicate that groundwater in the uppermost aquifer in the vicinity of the site is at approximately 20 feet bgs.

According to the Flood Insurance Rate Map (FIRM), the project site is in Zone X, an area of reduced flood risk due to levee protection (FEMA, 2024).

The project site is serviced by the City of Mountain View's Water Service. The majority of the potable water is surface water purchased from San Francisco Public Utilities Commission (SFPUC). Some water is purchased from Valley Water or is groundwater pumped from City-owned wells. Wastewater from the project site is conveyed by the City's sanitary sewer system to the wastewater treatment plant in Palo Alto, California. There is no recycled water distribution system at or in the vicinity of the project site.

3. Site Description

This page intentionally left blank.

4. Site History and Background Information

4.1 PREVIOUS REPORTS

No previous reports were reviewed by PlaceWorks for the preparation of this Phase I ESA report.

4.2 PAST USAGE OF THE SITE

Past usage of the site was assessed through review of historical aerial photographs, topographic maps, city directories and Sanborn maps. Copies of historical information reviewed are included in Appendix A.

Based on a review of historical information, the project site appears to have been vacant land prior to 1897. The site was developed with residential dwellings from about 1897 to about 1980, and the Mountain View Water Works was located on the site from at least 1907 to about 1956. A building which started as a grain warehouse in 1897 on the northeastern portion of the site was expanded into the Mountain View Fruit Exchange in 1904 until around 1921. The Cal Supply Tomato and Pickle Products warehouses were located on the northeast portion of the site from at least 1921 until about 1956. The current building first appears in the 1982 aerial photograph.

4.2.1 Historical Aerial Photographs

Aerial photographs for the project site obtained from EDR for the years 1939, 1948, 1950, 1956, 1963, 1968, 1974, 1982, 1991, 1998, 2006, 2009, 2012, 2016, and 2020 were reviewed for the project site. Copies of the aerial photographs are included in Appendix A.

- 1939 – The project site and surrounding area are developed with a mix of commercial and residential structures. A large warehouse straddles the northern boundary of the project site.
- 1948 – The project site and surrounding area appear relatively unchanged in comparison to the 1939 aerial photograph.
- 1950 – The project site and surrounding area appear relatively unchanged in comparison to the 1948 aerial photograph.
- 1956 – The project site and surrounding area appear relatively unchanged in comparison to the 1950 aerial photograph.
- 1963 – The commercial structures on the project site are no longer apparent, replaced by vacant land. The remaining areas of the project site and surrounding area appear relatively unchanged in comparison to the 1956 aerial photograph.

- 1968 – The project site and surrounding areas appear relatively unchanged in comparison to the 1963 aerial photograph.
- 1974 – The project site has less structures than before, and only the residential dwellings along the southeast side of Oak Street remain. Some of the commercial buildings east of the project site are redeveloped as parking lots. Shoreline Boulevard to the northwest appears similar to the modern-day configuration. The remainder of the surrounding areas appear relatively unchanged in comparison to the 1968 aerial photograph.
- 1982 – The project site is completely redeveloped. A large building is apparent in the center of the project site, with parking lots located to the north and south of it. It has the same configuration as the current building on the project site. The surrounding area appears relatively unchanged in comparison to the 1974 aerial photograph.
- 1991 – The project site and surrounding area appear relatively unchanged in comparison to the 1982 aerial photograph.
- 1998 – The project site and surrounding area appear relatively unchanged in comparison to the 1991 aerial photograph.
- 2006 – The project site and surrounding area appear relatively unchanged in comparison to the 1998 aerial photograph.
- 2009 – The project site and surrounding area appear relatively unchanged in comparison to the 2006 aerial photograph.
- 2012 – The project site and surrounding area appear relatively unchanged in comparison to the 2009 aerial photograph.
- 2016 – There appears to be a condominium building southeast of the project site. The project site and remainder of the surrounding area appear relatively unchanged in comparison to the 2012 aerial photograph.
- 2020 – The project site and surrounding area appear relatively unchanged in comparison to the 2016 aerial photograph.

4.2.2 Historical Topographic Maps

Historical Topographic Maps obtained from EDR for the years 1899, 1902, 1943, 1947, 1953, 1961, 1968, 1973, 1995, 1997, 2012, 2015, and 2018 were reviewed for the project site. Copies of the topographic maps are included in Appendix A.

- 1899 – The project site appears to be developed with five structures. A railroad is depicted to the northeast. Additional structures are depicted in the surrounding area.

- 1902 – The project site and surrounding area appear relatively unchanged in comparison to the 1899 topographic map.
- 1943 – The project site and surrounding area are depicted with omission tint.
- 1947 – The project site and surrounding area appear relatively unchanged in comparison to the 1943 topographic map.
- 1948 – The project site is depicted with two large structures. The surrounding area appears relatively unchanged in comparison to the 1947 topographic map.
- 1953 – The project site is depicted with omission tint, one large structure, and a water tank. The surrounding area appears relatively unchanged in comparison to the 1948 topographic map.
- 1961 – The large structure is no longer depicted on the project site. The remainder of the project site and surrounding area appear relatively unchanged in comparison to the 1953 topographic map.
- 1968 – The water tank is no longer depicted on the project site. The remainder of the project site and surrounding area appear relatively unchanged in comparison to the 1961 topographic map.
- 1973 – The project site and surrounding area appear relatively unchanged in comparison to the 1968 topographic map.
- 1995 – The project site is depicted with a large building in the center. This is the same configuration as the current building on the project site. The remainder of the site and surrounding area appear relatively unchanged in comparison to the 1973 topographic map.
- 1997 – The project site and surrounding area appear relatively unchanged in comparison to the 1995 topographic map.
- 2012 – Only roads and contours are depicted on the topographic map.
- 2015 – Only roads and contours are depicted on the topographic map.
- 2018 – Only roads and contours are depicted on the topographic map.

4.2.3 Sanborn Maps

Sanborn maps for the years 1888, 1891, 1897, 1904, 1908, 1921, 1943, and 1956 were provided for the project site. A copy of the Certified Sanborn Map Report is included in Appendix A.

- 1888 – Franklin Avenue is depicted southeast of the site, but no discerning features are depicted on the project site. Two dwellings are depicted to the southeast, opposite Franklin Avenue.

4. Site History and Background Information

- 1891 – The project site and surrounding area appear relatively unchanged in comparison to the 1888 map. An additional stable associated with one of the two dwellings is depicted to the southeast.

- 1897 – Two dwellings, three stables, two sheds, a water tank, and assorted outbuildings are depicted on the project site. Oak Street is depicted on the northern portion of the project site. A grain warehouse and a corral are depicted northeast of the project site adjacent to a railroad track siding, which parallels the main railroad track. Villa Street is depicted to the southwest of the project site, and additional dwellings are depicted to the south and west.

- 1904 – The project site appears relatively unchanged in comparison to the 1897 map. The former grain warehouse to the northeast is now depicted as Mountain View Fruit Exchange. The corral to the northeast is no longer depicted. An additional parallel main railroad track is depicted northeast of the main track depicted in the 1897 map. The remaining surrounding area appears to be relatively unchanged in comparison to the 1897 map.

- 1908 – Mountain View Water Works is depicted on the northeast portion of the project site. A steel water tank with an 85-foot-tall trestle is depicted along with a structure with two water pumps presumed to be for water wells. The remaining area of the project site and surrounding areas appear relatively unchanged in comparison to the 1904 map.

- 1921 – An additional shed is depicted on the Mountain View Water Works portion of the property. The northeast portion of the site is depicted as the Cal Supply Co. Tomato & Pickle Products warehouses. Sheds with rooms for grain, wood and coal storage are adjacent to the pickle warehouse. A guard shack is depicted on the northern portion of the project site associated with the former Mountain View Fruit Exchange warehouse to the northeast, which is now labeled as Growers Packing & Warehousing Assn. Inc. The dwelling formerly depicted south of the project site across the intersection of Villa Street and Franklin Street is no longer depicted. The remaining surrounding area appears relatively unchanged in comparison to the 1908 map.

- 1943 – A large warehouse and factory is depicted on the northeastern boundary of the project site, labeled as Mountain View Supply Co. pickle and catsup factory. Mountain View Fire Department is depicted adjacent to the Mountain View Water Works buildings. A warehouse is depicted southwest of the Mountain View Water Works, which is labeled as belonging to Mountain View Supply Co. The western portion of the site is depicted with dozens of pickle vats, along with an additional warehouse west of Oak Street. An additional dwelling is depicted at the northeast corner of Oak Street and Villa Street. A building for storage of feed and grain is depicted east of this dwelling. An additional Mountain View Supply Co. warehouse is depicted to the southeast, across Franklin Street. The remaining surrounding area appears relatively unchanged in comparison to the 1921 map.

- 1956 – The Mountain View Fire Department is no longer labeled as one of the buildings on the Mountain View Water Works portion of the project site. The remaining areas of the project site and surrounding area appear relatively unchanged in comparison to the 1943 map.

4.2.4 City Directory

PlaceWorks reviewed the EDR-City Directory for the project site, which is provided in Appendix A. City Directory data was searched for the years spanning 1926 through 2020. The project site is identified in the EDR-City Directory between 1975 and 2020.

- 1975 – Listings for 1000 Villa Street include Schatmeier Eric, Perez Mary Trini, Martin Don W, Duffey Francis J, and Asakura Chas M.
- 1980 – Listings for 1000 Villa Street include Trejos Guillermo and Sanchez D.
- 1982 – Listings for 1000 Villa Street include Mountain View and Police Department.
- 1986 – Listings for 1000 Villa Street include Mountain View and Police Department.
- 1991 – Listing for 1000 Villa Street is Mt View Police Officers Association.
- 1992 – Listings for 1000 Villa Street include Fire Dept Mountain View, Mountain View Police Association, Mountain View Chief Fire Administration, Police Department, and Tesfazion Elsa.
- 1995 – Listings for 1000 Villa Street include Mountain View Fire Dept, Mountain View Police Dept, and Mt View Police Officers Assn.
- 2000 – Listings for 1000 Villa Street include Chasity Zamora, Mountain View Fire Department, Mountain View City Fire Department, Mountain View City Police Department, Mountain View Fire Department, and Mt View Police Officers Association.
- 2005 – Listings for 1000 Villa Street include City of Mountain View Fire Department, Mountain View City Police Department, Mountain View Police Officers Association, and Mountain View Police Department.
- 2010 – Listings for 1000 Villa Street include Mountain View Fire Dept, Mountain View Police Dept, Mountain View Weed Abatement, and Mt View Police Officers Assn.
- 2014 – Listing for 1000 Villa Street is Volunteer Services Office.
- 2017 – Listings for 1000 Villa Street include City of Mountain View, Fire Department, and Mountain View City of Police Department.
- 2020 – Listings for 1000 Villa Street include D'Souza Peter A MD, Mountain View Fire Dept, and Mountain View Police Dept.

4.2.5 Building Permits

PlaceWorks reviewed the EDR Building Permit report, which is generated by searching municipal building permit records and is used to find indicators of environmental conditions. Building permit data can be used to

identify current and/or former operations and structures/features of environmental concern, such as the presence of underground storage tanks, pump islands, sumps, drywells, etc. A copy of the EDR Building Permit Report is provided in Appendix A.

The building permit records for the project site issued between 1999 and 2014 were primarily for interior renovations and tenant improvements, such as fire suppression system upgrades, parking improvements, electrical and mechanical work, etc. The building permits for surrounding properties were for new construction of condo units, apartment buildings, and office buildings, and tenant improvements or remodels for nearby single-family residences.

4.2.6 Environmental Lien and Activity and Use Limitations (AULs)

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls. A copy of the EDR-Environmental Lien and AUL Report is provided in Appendix A. EDR searched the Santa Clara County Recorder's Office, the California Environmental Protection Agency, and the United States Environmental Protection Agency. There were no environmental liens or AULs identified for the project site.

4.2.7 Prior Agricultural Use

Based on the review of historical aerial photographs, topographic maps and the site visit, the site has been developed since at least 1897. No previous agricultural fields or farming activities were noted on the project other than historical packaging and warehousing facilities for agricultural products.

4.2.8 Mines

Based on the review of historical aerial photographs and topographic maps, the project site was not used as a site for mining operations.

4.2.9 Illegal Drug Manufacturing

The project site was not identified by the California Hazardous Material Incident Report System (CHMIRS) which is maintained by the California Office of Emergency Services and contains information regarding hazardous material incidents such as accidental releases or spills. Clandestine Drug Laboratory Locations (CDL) database maintained by the U.S. Department of Justice was also reviewed for the presence of drug laboratories or dumpsites. No evidence of drug-related waste was observed during the site inspection.

4.2.10 Prior U.S. Government Ownership

Based on the review of the EDR database, historical aerial photographs, and topographic maps, there are no indications that the project site was owned by the U.S. Government or devoted to military use or operations.

4.3 SURROUNDING PROPERTY LAND USES

Based on the review of the EDR report, historical aerial photographs, and topographic maps, the properties surrounding the project site are predominantly residential, commercial, and institutional land uses. The site is bordered by multi-family residences and commercial properties to the east, single-family residences to the south, and Khan Lab Upper School across S. Shoreline Boulevard to the west. Historically the surrounding land use was residential and light industrial (warehouses for the storage of agricultural products) starting around 1897.

4. Site History and Background Information

This page intentionally left blank.

5. Environmental Records Review

5.1 STANDARD ENVIRONMENTAL RECORDS REVIEW

PlaceWorks utilized the electronic database service EDR to complete the environmental records review. To determine if the project site has or had any documented environmental concerns, or if other sites with documented environmental concerns exist within the search radii of the site as prescribed by ASTM 1527-21 and All Appropriate Inquiries, PlaceWorks reviewed a summary of the regulatory agency database listings prepared by EDR. In addition, where appropriate, PlaceWorks reviewed local regulatory agency files for additional specific information regarding sites identified in the EDR report judged to be of potential concern to the project site. The EDR report provides a summary of the agency databases reviewed and a map showing the location of the identified sites. This is provided as Appendix B (EDR, 2024). The results of the database search and follow-up agency file review are summarized below:

Database	Approximate Search Distance	Project site Listed?	Number of Sites within Search Area
Federal NPL (Superfund) sites	1 mile	No	2
Federal Delisted NPL sites	1 mile	No	1
Federal sites subject to CERCLA removals & CERCLA orders	0.5 mile	No	2
Federal CERCLA sites with NFRAP	0.5 mile	No	2
Federal RCRA facilities undergoing Corrective Action	1 mile	No	2
Federal RCRA TSD facilities	0.5 mile	No	0
Federal RCRA generators	0.25 mile	No	7
Federal institutional controls / engineering controls registries	0.5 mile	No	1
Federal ERNS list	Site & Adjoining	No	0
State- and tribal (Superfund) equivalent sites	1 mile	No	2
State- and tribal hazardous waste facilities	1 mile	No	17
State and tribal landfills and solid waste disposal facilities	0.5 mile	No	0
State and tribal leaking storage tanks	0.5 mile	No	21
State cleanup program sites, formerly known as SLIC	0.5 mile	No	11
State and tribal registered storage tanks	0.25 mile	Yes	1
State and tribal voluntary cleanup sites	0.5 mile	No	3
State and tribal brownfield sites	0.5 mile	No	0
Orphans	Site & Adjoining	No	5
HAZNET	Site & Adjoining	Yes	1

A review of selected regulatory agency databases for documented environmental concerns on the site, or in close proximity to the site, was conducted by EDR. A copy of the radius report, dated April 17, 2024, is included in Appendix B. The project site is listed on the CA SWEEPS UST, CA HIST UST, CA FID UST, CA UST, CA EMI, HAZNET, CA CERS, CA HWTS and FINDS databases.

5. Environmental Records Review

5.1.1 Federal NPL (Superfund) sites

The National Priorities List (NPL) is a list of contaminated sites that are considered the highest priority for clean-up by the EPA.

- The project site is not listed on the NPL List.
- The database identified two NPL sites within a mile radius of the project site.
- Spectra-Physics, Inc., at 1250 W Middlefield Road, about 0.74 miles north-northeast of the project site is listed on the NPL for trichloroethane, chloroform, 1,2-trans-dichloroethylene, and tetrachloroethene in groundwater. This facility is topographically downgradient of the project site.
- Teledyne Semiconductor, at 1300 Terra Bella Avenue, about 0.94 miles north of the project site is listed on the NPL for 1,1,2-trichloro-1,2,2-trifluoroethane, 1,3-dichlorobenzene, 1,2-trans-dichloroethylene, tetrachloroethene, and trichloroethylene in groundwater. This facility is topographically downgradient of the project site.

5.1.2 Federal Delisted NPL Sites

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425. (e), sites may be deleted from the NPL where no further response is appropriate.

- The project site is not listed on the delisted NPL List.
- The database identified one delisted NPL site within a mile radius of the project site.
- Jasco Chemical Corp. at 1710 Villa Street about 0.41 miles west-northwest of the project site is on the delisted NPL for impacts to groundwater. The site was deleted from the NPL in 2012 and is considered topographically downgradient of the project site.

5.1.3 Federal sites subject to CERCLA removals & CERCLA orders

The Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) list identifies sites which are suspected to have contamination and require additional investigation to assess if they should be considered for inclusion on the NPL.

- The project site is not listed on the CERCLIS List.
- The database search identified two CERCLIS listings within a half mile radius of the project site.
- Fremont Laundry at 990 Villa Street about 95 feet southeast of the project site is listed on the SEMS database. The facility did not qualify to be listed on the NPL.

- Jasco Chemical Corp. at 1710 Villa Street about 0.41 miles west-northwest of the project site is listed on the SEMS database. As mentioned in Section 4.1.2, the facility was delisted from the NPL in 2012.

5.1.4 Federal CERCLIS sites with NFRAP

CERCLIS-NFRAP status indicates that a site was once on the CERCLIS List but has No Further Response Actions Planned (NFRAP). Sites on the CERCLIS-NFRAP List were removed from the CERCLIS List in February 1995 because, after an initial investigation was performed, no contamination was found, contamination was removed quickly, or the contamination was not significant enough to warrant NPL status.

- The project site is not listed on the CERCLIS-NFRAP List.
- The database search identified two CERCLIS-NFRAP sites within a half mile radius of the project site.
- Camellia Park at 333 Stierlen Road about 0.25 miles northeast of the project site, is listed on the SEMS-ARCHIVE list. The last activity for this facility on the database is from 1993.
- Innerconn Technologies at 327 Moffett Boulevard about 0.32 miles east-northeast of the project site, is listed on the SEMS-ARCHIVE list. The last activity for this facility on the database is from 1992.

5.1.5 Federal RCRA facilities undergoing Corrective Action

The RCRA CORRACTS Facilities list catalogues facilities that treat, store, or dispose of hazardous waste and have been associated with corrective action activity.

- The project site is not listed as a RCRA CORRACTS TSD facility.
- The database search identified two RCRA CORRACTS TSD facilities within a one-mile radius of the project site.
- Spectra-Physics, Inc. at 1250 W Middlefield Road about 0.74 miles north-northeast of the project site is listed on the CORRACTS list. Additional information on this facility is provided in Section 4.1.1.
- Teledyne Semiconductors at 1300 Terra Bella Avenue about 0.94 miles north of the project site is listed on the CORRACTS list. Additional information on this facility is provided in Section 4.1.1.

5.1.6 Federal RCRA TSD facilities

The Resource Conservation and Recovery Act (RCRA) non-CORRACTS TSD Facilities List tracks facilities which treat, store, or dispose of hazardous waste and are not associated with corrective action activity.

- The project site is not listed as a RCRA non-CORRACTS TSD facility.
- The database search did not identify any RCRA non-CORRACTS TSD facilities within a half mile radius of the project site.

5. Environmental Records Review

5.1.7 Federal RCRA Generators

The RCRA Generator list is maintained by the EPA to track facilities that generate hazardous waste.

- The project site is not on the RCRA Generators list.

- The database search identified seven RCRA Generators within a quarter mile radius of the project site.
  - **West Dana LLC at 939 W Dana Street,** approximately 0.13 miles south of the project site, is listed as a small quantity generator of hazardous waste. The hazardous waste summary lists ignitable waste, lead and benzene. No violations are listed for the facility on the EPA Enforcement and Compliance History database. This site is not expected to have impacted the project site.

  - **Datapoint Corp at 241 Polaris Avenue,** approximately 0.18 miles north-northwest of the project site, is listed as a small quantity generator of hazardous waste. The database does not list what types of wastes the facility generates. No violations are listed for the facility on the EPA Enforcement and Compliance History database. This site is not expected to have impacted the project site.

  - **CVS Pharmacy #7774 at 850 California Street,** approximately 0.19 miles south of the project site, is listed as a large quantity generator of hazardous waste. The hazardous waste summary lists ignitable waste, corrosive waste, reactive waste, metal wastes, and various chemicals associated with pharmaceuticals. Violations are listed for the facility on the EPA Enforcement and Compliance History database. This site is not expected to have impacted the project site.

  - **C&C Body Shop at 243 Moffett Boulevard,** approximately 0.21 miles east-northeast of the project site, is listed as a small quantity generator of hazardous waste. The database does not list what types of wastes the facility generates. No violations are listed for the facility on the EPA Enforcement and Compliance History database. This site is not expected to have impacted the project site.

  - **Mountain View Family Physicians at 280 Hope Street,** approximately 0.22 miles southeast of the project site, is listed as a small quantity generator of hazardous waste. The database does not list what types of wastes the facility generates. No violations are listed for the facility on the EPA Enforcement and Compliance History database. This site is not expected to have impacted the project site.

  - **All Car Auto Painting at 903 California Drive,** approximately 0.22 miles south of the project site, is listed as a small quantity generator of hazardous waste. The database does not list what types of wastes the facility generates. No violations are listed for the facility on the EPA Enforcement and Compliance History database. This site is not expected to have impacted the project site.

  - **Dunns Automotive Serv Inc at 1447 West Dana Street,** approximately 0.23 miles west of the project site, is listed as a small quantity generator of hazardous waste. The database does not list what types of wastes the facility generates. No violations are listed for the facility on the EPA Enforcement and Compliance History database. This site is not expected to have impacted the project site.

5.1.8 Federal Institutional Control / Engineering Controls

A listing of sites with institutional and or engineering controls in place is maintained by the EPA. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of institutional controls.

- The project site is not listed as having institutional or engineering controls.
- The database identified one site with federal institutional controls within a 0.5-mile radius of the site.
    - Jasco Chemical Corporation at 1710 Villa Street, approximately 0.4 mile west-northwest of the project site, is listed as having engineering and institutional controls in place.

5.1.9 Federal ERNS List

The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The list is maintained by the National Response Center United States Coast Guard.

- The project site is not listed on the ERNS List.
- There are no adjoining properties on the ERNS List.

5.1.10 State-and Tribal (Superfund) equivalent sites

The database identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and have high potential risk.

- The project site is not listed on state- and tribal-equivalent NPL.

- The database search identified two state-and tribal equivalent NPL sites within a one-mile radius of the project site. Both facilities are downgradient and sufficiently far from the project site that they would not have impacted the site.

- Innerconn Tech & Union Bk at 327 Moffatt approximately 0.32 miles east-northeast of the project site, is identified on the RESPONSE list. The facility was referred to the Regional Water Quality Control Board. The site was taken over by Union Bank when Innerconn (formerly Raytheon) filed for bankruptcy. The case was closed by the RWQCB in 2013 with deed restrictions in place.

- LGM Manufacturing at 723 Stierlin Road approximately 0.60 miles north-northeast of the project site, is identified on the RESPONSE list. The site cleanup was certified in 1984.

5. Environmental Records Review

5.1.11 State- and Tribal Hazardous Waste Facilities

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

- The project site is not listed on state- and tribal- equivalent CERCLIS.

- The database search identified seventeen state- and tribal- equivalent CERCLIS sites within a mile radius of the project site.

- Fremont Laundry at 990 Villa Street, approximately 95 feet southeast of the project site, is listed on DTSC's EnviroStor for a voluntary cleanup. The site was certified in 2021 that all response actions, other than continued monitoring of compliance with land use restrictions and ongoing maintenance and operation of the active sub-slab depressurization system, have been completed. The dry cleaner has not operated at the site since 1985 and the property is now developed as a two-story commercial building. Annual O&M reports indicate that the sub-slab depressurization system is working in accordance with permit requirements. Since this facility is upgradient from the project site, this is considered to be a REC due to the possibility of vapor migration onto the project site, as discussed further in Section 4.2.8.

- Evelyn Avenue Parking Lot at the southeast corner of Evelyn Street and Franklin Street, approximately 148 feet east-southeast of the project site, is listed on DTSC's EnviroStor for a voluntary cleanup. The contaminant of concern was perchloroethylene (PCE) in soil vapor and groundwater from the upgradient Fremont Laundry site. DTSC issued a no further action letter in 2009 based on the construction of the multi-story apartment building and ventilation of the below grade garage in accordance with the plans presented in the *Subsurface Investigation and Vapor Intrusion Risk Evaluation Report*. However, because the property is upgradient from the project site and there is contamination of groundwater beneath the property with potential vapor migration onto the project site, this is considered to be a REC, as discussed further in Section 2.4.8.

- 954 Villa Street, approximately 171 feet southeast of the project site, is listed on DTSC's EnviroStor for a voluntary cleanup. The status is listed as active as of 2017. The property was a former dry cleaner that subsequently moved next door to 990 Villa Street. The property was formerly occupied by Tied House Café and Brewery but is currently vacant with plans to convert it to a commercial office building. A Removal Action Workplan (RAW) is being prepared with plans to install a sub-slab depressurization system with ongoing operation and maintenance under the direction of DTSC. Although this property is upgradient from the project site and there is the potential for vapor migration onto the project site, this facility is east

of the Fremont Laundry site, which is discussed above. Any soil vapors from this property would be comingled with the Fremont Laundry plume, which is considered to be a REC for the project site.

- Camellia Park Development at 333 Stierlin Road, approximately 0.25 miles northeast of the project site, is listed on DTSC's EnviroStor but was referred to another agency in 1988. It is listed as a historical site with soil contaminated with low levels of pesticides from prior greenhouse operations. The contaminated soils were capped beneath asphalt roads with deed restrictions tied to the property. This property is downgradient from the project site and the chemicals are not volatile. Therefore, there would be no impact to the project site.

- Innerconn Tech & Union Bk at 327 Moffett, approximately 0.32 miles east-northeast of the project site, is listed on DTSC's EnviroStor for a state response but was referred to the Regional Water Quality Control Board in 1987. The EnviroStor website states that a removal action completion report was submitted in August 1989. Contamination of groundwater from chemicals used in the manufacture of semiconductors was reported in groundwater. However, the site was closed and certified by the RWQCB in 2013 with deed restrictions in place. In addition, this facility is downgradient and far enough from the project site that there would be no impact to the project site.

- Jasco Chemical Corp. at 1710 Villa Street, approximately 0.41 miles west-northwest of the project site, is listed on DTSC's EnviroStor with USEPA as the lead agency. The EnviroStor website states that DTSC reviewed the Final Close Out Report for the Superfund site and concurs with USEPA in deleting the site from the NPL. This facility is downgradient from the project site and would not impact the project site.

- Eleven additional facilities were identified on DTSC's EnviroStor database which were greater than a half mile from the project site and are listed in the EDR report in Appendix B.

5.1.12 State and Tribal- equivalent Landfill and/or Solid Waste Disposal Sites

The database search did not identify any State Landfills or Solid Waste Disposal Sites within a one-half mile radius of the project site.

- The project site is not listed on state- and tribal- equivalent landfill and/or solid waste disposal site lists.

- The database search did not identify any state-and tribal equivalent landfill and/or solid waste disposal sites within a half mile radius of the project site.

5.1.13 State and Tribal Leaking Storage Tanks

The State Water Resources Control Board Leaking Underground Storage Tank Information System contains an inventory of Leaking Underground Storage Tank (LUST) Incident Reports.

- The project site is not listed on the State and Tribal LUST list.

5. Environmental Records Review

- The database search identified 21 LUST facilities within a half-mile radius of the project site. However, many of the facilities are listed more than once as noted below.

  - **Mountain View Fire Station #1 at 997 Villa Street,** approximately 0.042-mile south-southeast of the project site, is listed because of a leak of gasoline that impacted soil in 1985. Currently the cleanup status of the case is listed as completed – case closed as of 1995. Based on the current regulatory status of the case, it is not expected to have had an impact on the project site. This facility was listed three times in the EDR report.

  - **Economy Motors at 997 W Dana Street,** approximately 0.11 miles south of the project site, is listed because of a leak of gasoline into groundwater reported in 1988. Currently the cleanup status of the case is listed as completed – case closed as of 1998. Based on the current regulatory status of the case, it is not expected to have had an impact on the project site.

  - **Courtyard Business Park at 1200-1390 Villa Street,** approximately 0.12 miles west-northwest of the project site, is listed because of a release of chlorinated hydrocarbons into soil and groundwater reported in 1998. Currently, the status of the facility is listed as completed – case closed as of 2011. Based on the regulatory status and downgradient topography, this facility is not expected to impact the project site.

  - **Lee's Auto Service at 705 W Dana Street,** approximately 0.23 miles south-southeast of the project site, is listed because of a release of gasoline in 1989. Currently, the status of the facility is listed as case closed as of 1998. This facility is listed twice in the databases. Based on the regulatory status and downgradient topography, this facility is not expected to impact the project site.

  - **Chevron #9-0476 at 396 Castro Street,** approximately 0.23 miles south of the project site, is listed because of a release of gasoline into groundwater reported in 1990. Currently, the status of the facility is listed as completed – case closed as of 1998. The facility is listed three times in the databases. Based on the regulatory status and downgradient topography, this facility is not expected to impact the project site.

  - **Young's Automotive at 890 Central Avenue,** approximately 0.23 miles northeast of the project site, is listed because of a leak discovered in 1987 during a tank closure. No further investigation is reported and it does not appear on the RWQCB's GeoTracker website. Based on the downgradient location and distance of this facility, it is not expected to have impacted the project site.

  - The remaining seven LUST facilities (many facilities were listed more than once) are located greater than a quarter mile from the project site and are not expected to impact the project site. These facilities are provided in the EDR report in Appendix B.

5.1.14 State Cleanup Program Sites

The State Cleanup Program Sites (CPS), also known as Site Cleanups (SC) and formerly known as Spills, Leaks, Investigations, and Cleanup (SLIC) sites, are found on the GeoTracker website. This is the Water Boards data management system for sites that have impacted, or have the potential to impact, water quality, with emphasis on groundwater.

- The project site is not on the CPS list.
- The database search identified nine CPS facilities within a half-mile radius of the project site.
    - **Classic Communities at Bryant & West Evelyn Street,** approximately 0.073 miles east of the project site, is listed because of tetrachloroethylene (PCE) and trichloroethylene (TCE) in soil vapor and groundwater beneath the site. As of 2017, the RWQCB is no longer involved in the site and has closed the case because DTSC is overseeing this investigation of impacts to soil vapor and groundwater from the former dry cleaning facilities. New apartment buildings were constructed on the site and were designed to minimize vapor impacts to residents with a below grade parking garage that has enhanced ventilation. This site is known as the Evelyn Avenue Parking Lot on DTSC's EnviroStor website. Because this facility is adjacent to the project site and there is the potential for the migration of vapors and groundwater prior to the construction activities, this is considered to be a REC and is discussed further in Section 4.2.8.
    - **Bryant Street Property at 240-284 Bryant Street,** approximately 0.075 miles south-southeast of the project site, is listed because of pesticides and lead in soil. Impacted soil was removed for a subsurface parking garage and the cleanup status of the case is listed as completed – case closed as of 2014. Based on the current regulatory status of the case and the non-volatile chemicals found in soil, it is not expected to have an impact on the project site.
    - **Careful Cleaners at 860 Villa Street,** approximately 0.10 miles southeast of the project site, is listed because of a release of tetrachloroethylene and trichloroethylene in soil and soil vapor. Currently the cleanup status of the case is listed as completed – case closed as of 2016. Based on the current regulatory status of the case and the distance from the project site, it is not expected to have impacted the project site.
    - **Former Redstone Motors,** approximately 0.18 miles east-southeast of the project site, is listed due to releases of petroleum products to soil. Impacted soil was removed and residual contamination does not pose a risk to human health. The case was closed and a no further action letter was issued in August 2012. Based on the regulatory status of the case and the containment of petroleum products at the facility, it is not expected to have impacted the project site.
    - There are five additional sites in the EDR database. However, they are all downgradient and 0.3 miles or more from the project site. Therefore, these sites are not expected to have impacted the project site.

5. Environmental Records Review

5.1.15 State and Tribal Registered Underground Storage Tanks

The State Water Resources Control Board's Hazardous Substance Storage Container Database maintains a list of USTs regulated by the Resource Conservation and Recovery Act.

- The project site is listed on the registered UST list.
- City of Mountain View – Police/Fire Administration at 1000 Villa Street is listed on the registered UST list. However, according to the City of Mountain View, no UST was ever installed at the site (City of Mountain View, 2024).
- The database search did not identify any other registered UST facilities within a quarter mile radius of the project site under this category.

5.1.16 State and Tribal Voluntary Cleanup Sites

The DTSC maintains a list of low threat level properties with either confirmed or unconfirmed releases and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

- The project site is not listed on the state and tribal voluntary cleanup program.
- The database search identified three state and tribal voluntary cleanup program sites within a half mile radius of the project site.
- Fremont Laundry at 990 Villa Street, about 95 feet southeast of the project site, is identified on the VCP list. The facility has a land use covenant and has been certified by DTSC as having completed all response actions. However, there are ongoing maintenance and operation activities associated with the active sub-slab depressurization system. Additional details regarding this facility are provided in Section 4.1.11 above. This is a potential vapor encroachment issue and is considered to be a REC, as discussed further in Section 4.2.8.
- Evelyn Avenue Parking Lot located at the southeast corner of Evelyn Avenue and Franklin Street, approximately 148 feet east-southeast of the project site, was identified on the VCP list. Although the facility received a no further action determination in 2009 by DTSC, the contaminants at the site include PCE and TCE vapors, which pose a potential vapor encroachment issue for the project site. See Section 4.1.11 above for additional details and Section 4.2.8 for a discussion of vapor encroachment issues.
- 954 Villa Street, approximately 171 feet southeast of the project site, was identified on the VCP list. The facility is listed as active since 2017 by DTSC. The facility was a former dry cleaning facility and is currently vacant with plans to convert it to a commercial office building. A Removal Action Workplan (RAW) is being prepared with plans to install a sub-slab depressurization system with ongoing operation and maintenance under the direction of DTSC. Because this property is upgradient from the project site and the contaminants of concern are PCE and TCE vapors, there is the potential for a vapor encroachment

issue at the project site. See section 4.1.11 above for additional details. Because this facility is east and upgradient of the Fremont Laundry site, any migration of soil vapor and/or groundwater would be comingled with the Fremont Laundry site plumes, as discussed further in Section 4.2.8.

5.1.17 Orphan Sites

The EDR database identified five facilities that were indicated as being potentially in the area and were not mapped due to incomplete address information. None of the orphan sites appear to be in close proximity (i.e., within 0.5 mile of the project site). Additional information can be found in the EDR report included in Appendix B.

5.2 ADDITIONAL ENVIRONMENTAL RECORDS REVIEW

In conformance with ASTM, records from the additional agencies described below were also reviewed.

5.2.1 Local Brownfield Lists

The DTSC's Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further.

- The project site is not listed on the SMBRP database.
  - The database search identified 17 SMBRP sites within a 0.5 mile radius of the project site.
    - **Fremont Laundry at 990 Villa Street,** about 95 feet southeast of the project site, is identified on the SMBRP list. The facility has a land use covenant and has been certified by DTSC as having completed all response actions. However, there are ongoing maintenance and operation activities associated with the active sub-slab depressurization system. Additional details regarding this facility are provided in Section 4.1.11 above and a detailed discussion is provided in Section 4.2.8. Soil vapor and groundwater migration from this facility prior to the remediation efforts are considered to be a REC for the project site.

    - **Evelyn Avenue Parking Lot** located at the southeast corner of Evelyn Avenue and Franklin Street, approximately 148 feet east-southeast of the project site, was identified on the SMBRP list. Although the facility received a no further action determination in 2009 by DTSC, the contaminants at the site include PCE and TCE vapors, which pose a potential vapor encroachment issue for the project site. See Section 4.1.11 above for additional details and Section 4.2.8 for more information regarding vapor encroachment. Potential soil vapor and groundwater migration from this facility prior to its construction as apartment buildings constitutes a REC for the project site.

    - **954 Villa Street,** approximately 171 feet southeast of the project site, was identified on the SMBRP list. The facility is listed as active since 2017 by DTSC. The facility was a former dry cleaning facility and is currently vacant with plans to convert it to a commercial office building. A Removal Action Workplan (RAW) is being prepared with plans to install a sub-slab depressurization system with ongoing operation and maintenance under the direction of DTSC. Because this property is upgradient from the project site and the contaminants of concern are PCE and TCE vapors, there is the potential for a vapor encroachment issue at the project site. See section 4.1.11 above for additional details. However, since this facility is east and upgradient of the Fremont Laundry site,

any soil vapors or groundwater from this facility would have comingled with the plumes from the Fremont Laundry site, which is considered to be a vapor encroachment issue for the project site.

- The other 14 sites are either downgradient or more than 0.5 mile from the project site. A review of these facilities indicate that they are not expected to have impacted the project site.

5.2.2 Local Lists of Hazardous Waste Sites

A record search was done on the following databases: HIST Cal-Sites and CalEPA's Regulated Site Portal, which includes hazardous chemical and waste generator programs.

- The project site is not listed as a known or potential hazardous substance site (HIST Cal-Sites) and is not listed as a hazardous waste generator.
- The database search identified six hazardous waste generators within a quarter mile search radius.
- **CVS Pharmacy #7774 at 850 California Street,** approximately 0.19 miles south of the project site, is listed as a hazardous waste generator. The site ID is listed as 109438 and the CERS ID is listed as 10356082. Additional information on this facility is provided in Section 4.1.7. This site is not expected to have impacted the project site.
- **Google LLC-CYD1 at 1300 Villa Street,** approximately 0.12 miles west-northwest of the project site, is listed as a hazardous waste generator. The site ID is listed as 394024 and the CERS ID is listed as 10631752. This site is downgradient and is not expected to have impacted the project site.
- **Squaglia Mfg. at 275 Polaris Avenue,** approximately 0.20 miles north-northwest of the project site, is listed as a hazardous waste generator with hazardous waste onsite treatment. The site ID is listed as 156531 and the CERS ID is listed as 10351042. This facility is downgradient from the project site and is not expected to have impacted the project site.
- **Pan American Collision Center at 243 Moffett Boulevard,** approximately 0.21 miles east-northeast of the project site, is listed as a hazardous waste generator. The site ID is listed as 141459 and the CERS ID is listed as 10350265. This site is also downgradient and not expected to have impacted the project site.
- **C.K. Tool Company, Inc. at 1033 Wright Avenue, a**pproximately 0.23 miles north of the project site, is listed as a hazardous waste generator. The site ID is listed as 100993 and the CERS ID is listed as 10344049. This site is also downgradient and not expected to have impacted the project site.
- **Young's Automotive at 890 Central Avenue,** approximately 0.23 miles northeast of the project site, is listed as a hazardous waste generator. The site ID is listed as 86952 and the CERS ID is listed as 10356253. This site is also downgradient and not expected to have impacted the project site.

5.2.3 Local Lists of Registered Storage Tanks

A record search was done of the local lists of registered storage tanks within a 0.25-mile radius of the project site.

- The database search identified the project site on three separate local UST databases.
- The project site at 1000 Villa Street was listed on the SWEEPS UST database for a 1,000-gallon diesel fuel UST, the HIST UST and CA FID UST databases. However, the UST was never installed at the site. The diesel emergency generator is fueled by a 950-gallon aboveground storage tank housed at the City's Well #22 location.
- The database search identified eight registered storage tank facilities within a quarter mile search radius that are either on the SWEEPS List, the HIST UST list, or the FID UST list.
- **Fire Station No. 1 at 997 Villa Street,** approximately 224 feet south-southeast of the project site, is listed as having a 550-gallon premium gasoline UST and a 1,000 gallon unleaded gasoline UST on the HIST UST database. The facility is also listed on the SWEEPS UST for the 550-gallon unleaded gasoline UST, and on the CA FID UST database for an inactive permit.
- **Safeguard Transmission at 190 Stierlin Road,** about 0.12 miles east-northeast of the project site, is listed on the SWEEPS UST database for a 550-gallon waste oil UST installed in 1988, a 1,000-gallon leaded gasoline UST, and a 1,000-gallon waste oil UST. The facility is listed on the CA FID UST database for an active permit.
- **Crowley Co. at 855 Jackson Street,** about 0.16 miles northeast of the project site is listed on the SWEEPS UST database for a 10,000-gallon regular unleaded gasoline UST installed in 1985 and a 10,000-gallon leaded gasoline UST. The facility is listed on the HIST UST database for a 10,000-gallon regular gasoline UST installed in 1955 and a 10,000-gallon unleaded gasoline UST installed in 1966. The facility is also listed on the CA FID UST database for an active permit.
- **Disk Works at 241 Polaris Avenue,** about 0.18 miles north-northwest of the project site, is listed on the HIST UST database for a 26-gallon waste UST installed in 1969, a 40-gallon waste UST installed in 1983, a 45-gallon waste UST installed in 1983, a 360-gallon waste UST installed in 1969, and a 50-gallon waste UST installed in 1969. This facility does not appear on the SWEEPS list or the FID UST list and this facility is no longer in business.
- **Lee's Auto Service at 705 W Dana Street,** about 0.23 miles south-southeast of the project site, is listed on the SWEEPS UST database for a 2,000-gallon unleaded gasoline UST, a 3,000-gallon leaded gasoline UST, and a 7,000-gallon unleaded UST. The facility is listed on the HIST UST database with a 3,000-gallon waste UST, a 7,500-gallon unleaded gasoline UST, a 200-gallon waste oil UST, and a 2,000-gallon premium gasoline UST. The facility is also listed on the CA FID UST database for an inactive permit.

- **Oku Inc. at 1015 Wright Avenue,** about 0.23 miles north of the project site, is listed on the SWEEPS UST database for a 550-gallon unleaded gasoline UST and a 550-gallon leaded gasoline UST. The facility is also listed on the HIST UST database for the same USTs.

- **Chevron 90476 at 396 Castro Avenue,** about 0.23 miles south of the project site, is listed on the SWEEPS UST database for an 8,000-gallon product UST, a 3,900-gallon product UST, a 6,900-gallon product UST, and a 550-gallon waste UST. The facility is also listed on the CA FID UST database for an inactive permit. The USTs were removed in 1986 and this former gasoline station has been redeveloped as office buildings. The case has been closed as of 1998.

- **Wolfsburg Corp. at 261 Moffett Boulevard** about 0.24 miles east-northeast of the project site is listed on the SWEEPS UST database for a 1,000-gallon leaded gasoline UST, a 1,000-gallon unleaded gasoline UST, and a 500-gallon waste oil UST. The facility is also listed on the HIST UST database twice, and the CA FID UST database for an inactive permit. This facility was a former auto repair shop but is no longer located at this address. The property is currently a retail building for sale, and it is likely that the USTs are no longer present.

5.2.4 HAZNET

HAZNET is the Hazardous Waste Information System. The project site is listed as a HAZNET site.

- **The City of Mountain View at 1000 Villa Street** had 0.5 tons of "other empty containers 30 gallons or more" and 0.153 tons of "unspecified organic liquid mixture" removed in 2010. No other records of hazardous waste disposal were reported.

5.2.5 High Risk Historical Records

EDR searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and service stations. There was one identified high-risk historical site within 0.125 mile of the project site.

- **Guerrero Shell Service at 178 Stierlin Road,** approximately 0.12-mile east-northeast of the project site, is listed as a gasoline service station from 1969 to 1971, an automotive repair shop from 1974 to 1999, and an automotive transmission repair shop from 2012 to 2013. The previous businesses are no longer present and the property is currently vacant. Given that the site is downgradient and across the Central Expressway and railroad easement from the project site, it is unlikely to have impacted the project site.

5.2.6 State of California Geologic Energy Management Division

A review of California Division of Geologic Energy Management (CalGEM) Well Finder indicates that there are no oil wells or oil fields in the vicinity of the project site. The closest oil well is located approximately 8.3-

miles southwest of the project site. The well is identified as a plugged dry hole that was advanced by Arco Western Energy Co. (CalGEM 2024).

5.2.7 San Francisco Bay Air Quality Management District

The San Francisco Bay Area Air Quality Management District (BAAQMD) Facility Information Detail (FIND) database was searched for the project site. One permit was listed for the site. The City of Mountain View Fleet Services has a permit renewal application pending for an emergency standby diesel generator.

5.2.8 Vapor Migration

Vapor encroachment is a concern associated with the potential for volatile chemicals, such as petroleum fuels and/or chlorinated solvents, to migrate through the subsurface in the gas phase from contaminated soil and/or groundwater plumes. Vapor intrusion can occur if subsurface volatile contaminants migrate into occupied buildings through cracks and penetrations in the building slab.

The ASTM E1527-21 states that for purposes of this practice, "migrate" or "migration" refers to the movement of hazardous substances or petroleum products in any form, including, for example, soil and liquid at the surface or subsurface, and vapor in the subsurface." Although the ASTM E1627-21 standard does not specifically state the methods that must be used to evaluate vapor migration, ASTM has developed a separate *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (*ASTM E2600-22). This ASTM Standard describes a methodology to conduct vapor encroachment screening to determine if the project site has been impacted. The goal of the vapor encroachment screening is to determine whether there is a vapor encroachment condition (VEC) on the subject property and whether the VEC represents evidence of a REC under the context of the ASTM ESA Standard Practice. It should be noted that the identification of a VEC on the project site does not necessarily indicate that the migration of vapors into existing or proposed structures has occurred but does indicate whether the potential for vapor migration is likely. The ASTM E2600-22 Standard is a two tier approach for screening sites for potential vapor encroachment.

The Tier 1 screening process involves identifying all facilities within the search radii, which are:

- Off-site properties that are within one-third of a mile of the subject property for chemicals of concern, including chlorinated organic compounds,
- Off-site properties that are within one tenth of a mile for petroleum hydrocarbons.

No off-site properties within a 0.1 mile were identified with petroleum hydrocarbon impacts. Five off-site properties with chlorinated organic compounds, primarily PCE, were identified within the search radius. Two of the properties warranted Tier 2 screening. The following properties were screened out as not having a potential impact on the project site:

- **Careful Cleaners,** which is located approximately 0.10 mile southeast of the project site at 860 Villa Street, was a former dry cleaning facility with concentrations of PCE in soil, soil vapor, and groundwater. Based on the results of two Phase II site investigations and a site conceptual model, the case was closed by the

5. Environmental Records Review

Santa Clara County Department of Environmental Health in December 2016. Therefore, this property would not result in an impact to the project site.

- **954 Villa Street,** approximately 171 feet southeast of the project site, is listed as active since 2017 by DTSC. The facility was the site of a former dry cleaning facility (Fremont Laundry), which subsequently moved to the west at 990 Villa Street. The property is currently vacant with plans to convert it to a commercial office building. Approximately 35 cubic yards of PCE-contaminated soil was removed in 2020. However, indoor air concentrations of PCE were detected above screening levels for commercial occupancy. A Removal Action Workplan (RAW) is being prepared with plans to install a sub-slab depressurization system with ongoing operation and maintenance under the direction of DTSC. Because this property is adjacent and east of the former Fremont Laundry, which is carried forward in the Tier 2 screening, any soil vapors migrating from this facility would be analyzed and accounted for by the adjacent Fremont Laundry site to the west, which is discussed below.

- **Classic Communities at Bryant & West Evelyn Street,** approximately 0.073 miles east of the project site, was originally listed by the RWQCB because of tetrachloroethylene (PCE) and trichloroethylene (TCE) in soil vapor and groundwater beneath the site. However, as of 2017, the RWQCB is no longer involved in the site and has closed the case because DTSC is overseeing the investigation, which is known on DTSC's EnviroStor website as the Evelyn Avenue Parking Lot. This is the same site that was carried forward for Tier 2 screening, as discussed below.

Under Tier 2 screening, available reported from the regulatory agencies were reviewed to determine the status of assessment/remediation, size and migration pathways, geologic conditions, and other available information. This information is used to determine the distance between the plume and the project site boundary. If the distance from the edge of a plume in a downgradient direction is greater than 100 feet for VOCs or 30 feet for dissolved petroleum hydrocarbons, then the site may be screened out and a VEC does not exist.

No off-site properties with hydrocarbon plumes were identified within 30 feet of the project site. Two adjacent off-site properties were identified with potential PCE plumes within 100 feet of the project site, as follows:

- **Former Fremont Laundry at 990 Villa Street,** adjacent across Franklin Street to the east of the project site, had indoor air concentrations in excess of DTSC commercial/industrial carcinogenic screening levels, groundwater concentrations above maximum contaminant levels (MCLs), and maximum concentrations in soil vapor of 200,000 ug/m^3. The site has a land use restriction and is being regulated by DTSC, with ongoing maintenance and operation of an active sub-slab depressurization system for the commercial building that now occupies the site Annual O&M reports indicate that the sub-slab depressurization system is working in accordance with permit requirements. However, it is not known if soil vapors migrated onto the project site prior to the installation of the sub-slab depressurization system. No off-site investigation of soil vapors or groundwater concentrations to the west was conducted. Given that soil vapor concentrations along the western edge of the property, within 100 feet of the project site, had PCE concentrations of 12,000 ug/m^3, this is considered to be a VEC.

- **The Evelyn Avenue Parking Lot,** adjacent to the project site across Franklin Street, had PCE groundwater concentrations up to 230 ug/l and soil vapor concentrations up to 13,000 ug/m^3 at locations along the western portion of the site. The site was subsequently converted to a multi-story apartment building. DTSC issued a no further action letter in 2009 based on the enhanced ventilation of the below grade garage in accordance with the plans presented in the *Subsurface Investigation and Vapor Intrusion Risk Evaluation Report*. However, no off-site investigation was conducted at this property and it is not known whether soil vapors and/or groundwater may have migrated to the west onto the project site.

The soil borings advanced at 990 Villa Street consisted of silty sand to depths of approximately 10 feet bgs. Groundwater was encountered at about 20 feet bgs. Although the report stated that based on limited data, it appeared that the groundwater direction may be to the northeast, the flat gradient of 0.005 ft/ft and the fact that the project site is downgradient from this location indicate that groundwater may have migrated onto the project site. It is also likely that soil vapors may have migrated off-site from the adjacent properties, due to the sandy nature of the subsurface soils. Based on the fact that the project site boundary is less than 100 feet from the edge of the off-site plumes and there are currently buildings on the project site within 100 feet of the edge of soil vapor and/or groundwater plumes from the adjacent properties, this is considered to be a VEC and additional investigation is recommended.

5.2.9 User-Provided Information

The ASTM Standard requires disclosure in the Phase I ESA report whether the user of the report has specialized knowledge about previous ownership or uses of the property that may be material to identifying RECs or HRECs, or whether the user has determined that the property's Title contains environmental liens or other information related to environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations, as defined by ASTM. In addition, we are required by the ASTM Standard to inquire whether the user of the report has prior knowledge that the price of the property has been reduced for environmentally related reasons.

PlaceWorks was informed by the user that to their knowledge there are no liens or other information about the environmental condition of the property in the Title. In addition, the user was not aware of specialized knowledge about previous ownership or uses of the property that may be material to identifying RECs with the exception of the information provided above and has not indicated that the price of the property has been reduced for environmentally related reasons. There were no liens or AULs identified in the EDR Environmental Lien and AUL Search Report, which is included in Appendix A.

5. Environmental Records Review

This page intentionally left blank.

6. Site Reconnaissance and Key Personnel Interview(s)

Two site inspections were conducted by PlaceWorks to observe site conditions. The first site visit was conducted by PlaceWorks on March 17, 2023. Since this site visit was conducted more than a year ago and the ASTM E1527-21 standard requires site inspections to be conducted within 180 days of the date of the Phase I ESA, a second site reconnaissance was conducted on April 29, 2024. No weather-related conditions or other conditions that would limit our ability to observe the site occurred during our site inspections. PlaceWorks personnel observed the exterior portions of the property, including the property boundaries. PlaceWorks was accompanied by Emergency Services Officer Bob Maitland, with support from Naveen Govind, Senior Project Manager with City of Mountain View Public Works Department during the first site visit. PlaceWorks was accompanied by Naveen Govind, Senior Project Manager with the City of Mountain View and Billy Sourji, City of Mountain View Police Department, during the second site inspection. Site photographs from the reconnaissance are included in Appendix C.

ASTM requires that the current site owner or Key Site Manager and user, if different from the current owner or Key Site Manager, be asked if there are any helpful documents or information that can be made available for review. These consist of environmental site assessment reports, audits, permits, tank registrations, Material Safety Data Sheets, Community Right-to-Know plans, safety plans, hydrogeologic or geotechnical reports, or hazardous waste generator reports.

6.1 CURRENT USE OF THE PROPERTY

The site is currently comprised of one two-story office building, which houses the City's Police Department, Fire Department administrative staff, Emergency Dispatch (911 call center), and Emergency Operations Center. The site also includes a 42-stall public parking lot, a 100-stall restricted staff parking lots, a pump station for one of the City's groundwater wells, and a K-9 training area.

6.2 SITE VISIT OBSERVATIONS

6.2.1 General Description of Structures

The site features a single two-story building constructed in 1980. In the front, a publicly accessible plaza is surrounded by two wings of the building. In the rear of the building two terraces lead down to the back parking lot. Landscaping and visitor parking are located west and south of the building. North and east of the building are parking areas for employee and service vehicles. Three shipping containers, used for storage and for old evidence, are located in the northwest portion of the site, and an emergency diesel generator is also located in the north parking lot.

6. Site Reconnaissance and Key Personnel Interview(s)

6.2.2 Heating and Cooling System

The site features a heating and cooling system with the primary equipment located on the north side of the building adjacent to the parking lot. Additional fans are located near the front of the building on the southeast side. Heating and cooling are fueled by electricity and natural gas. No indication of heating oil usage or tanks was noted.

6.2.3 Potable Water Supply and Sewage Disposal System or Septic Systems

The project is currently connected to and will continue to obtain potable water from the City of Mountain View's water distribution system and convey wastewater to the City's sanitary sewer system.

6.2.4 Use and Storage of Petroleum Products and Hazardous Materials

Limited amounts of cleaning supplies were noted in the janitor's room inside the building. Also, chemicals used to maintain the HVAC system were present near the heating and cooling system. These materials generally were in containers of five gallons or less and were adequately stored. No significant staining or indications of releases were noted.

Within the evidence room inside the building, ammunition is stored. Also, there is an armory on the first floor of the building where munitions such as tear gas and pepper spray are stored. The door to the armory is locked and appropriately labeled as containing flammable and explosive materials.

Outside the north side of the building, there are fire safes that are appropriately labeled as containing flammable and explosive materials. Within the fire safes are black powder, lighter fluid, fireworks, and ammunition.

The emergency generator, located away from the main building on the north side of the rear parking lot, is powered by diesel fuel contained in a 950-gallon aboveground storage tank, which is located at the Well #22 building. No fueling of vehicles or vehicle maintenance activities are conducted on site.

6.2.5 Vehicle Maintenance Lifts

No vehicle maintenance lifts were observed at the project site. All vehicle maintenance is conducted off-site.

6.2.6 Emergency Generators and Sprinkler System Pumps

As described in Section 5.2.4, *Use and Storage of Petroleum Products and Hazardous Materials,* an emergency generator is located away from the main building on the north side of the rear parking lot.

6.2.7 Polychlorinated Biphenyls (PCBs) Associated with Electrical or Hydraulic Equipment

No hydraulic equipment was observed on the project site. A pad-mounted transformer was observed on the west side of the main building. No staining was observed on the concrete surrounding the transformer. No

pole mounted transformers are located on or adjacent to the site. No stickers indicating the presence of PCBs were noted. The manufacture of PCBs was banned in 1979. Based on the construction date of the facility (1980), it is unlikely that PCB-containing electrical equipment is present.

6.2.8 Floor Drain and Sumps

Standard interior sanitary drains are present inside the building that connect to the City's sanitary sewer system. No staining or indications of illegal discharges were noted.

6.2.9 Catch Basins

Catch basins were observed throughout the parking lot in the rear of the building that collect stormwater and are connected to the City's storm drain system.

6.2.10 Dry Wells

No dry wells were observed at the project site.

6.2.11 Pits, Ponds, Lagoons, and Pools of Liquid

No ponds, lagoons, or pools of liquid were observed at the project site.

6.2.12 Odors

No odors were observed at the project site.

6.2.13 Stains or Corrosion on Floors, Walls, or Ceilings

No stains or corrosion were observed within the interior of the project site.

6.2.14 Stained Soil or Pavement

De minimis staining was observed in the parking areas and in the outside covered concrete area, consistent with routine leakage from vehicles. The staining appeared to be superficial and limited in extent.

6.2.15 Stressed Vegetation

No stressed vegetation was observed at the project site.

6.2.16 Solid Waste and Evidence of Waste Filling

No solid waste or evidence of waste filling was observed on site.

6.2.17 Wastewater and Stormwater Discharge

No wastewater discharge was observed on the project site other than the presence of internal drains associated with the plumbing system. Stormwater is collected in catch basins on the project site and conveyed to the City's storm drain system.

6.2.18 Monitoring, Water Supply, or Irrigation Wells

The City of Mountain View Well No. 22 was observed in the northwest corner of the project site, which is used to supply groundwater to the City's water distribution system. No monitoring or irrigation wells were observed at the project site.

6.3 INTERVIEWS

The first site visit was conducted with Emergency Services Officer Bob Maitland, with support from Naveen Govind, Senior Project Manager with City of Mountain View Public Works Department. The second site visit was conducted with Naveen Govind, Senior Project Manager with City of Mountain View Public Works Department and Billy Sourji with the City of Mountain View Police Department.

7. Data Gap Identification

Adjacent landowners were not interviewed for this Phase I Environmental Site Assessment. However, other landowners include residential and commercial properties. As such, this is not considered a significant data gap.

Two adjacent sites of concern were identified based on a review of the EDR databases and additional review of sites under investigation and/or remediation by DTSC. These sites have the potential for creating a vapor encroachment condition on the subject property due to vapor and groundwater releases from former dry cleaning operations.

The database search contained in Appendix A indicates that the project site is not on the Recorded Environmental Cleanup Liens database which is maintained by the DTSC and contains a listing of liens placed upon real properties. The project site is also not listed on the DTSC's Deed Restriction database which lists sites with DTSC with restricted land use. The project site is not listed on NPL Liens, a database the EPA maintains on real property, in order to recover remedial action expenditures when the property owner has received notification of potential liability.

7. Data Gap Identification

This page intentionally left blank.

8. Findings and Conclusions

PlaceWorks has performed a Phase I Environmental Site Assessment (ESA) on behalf of SVA Architects (Client/User) for the Mountain View Public Safety Building Project, located at 1000 Villa Street in the City of Mountain View, Santa Clara County, California (Figures 1 and 2). The project site consists of one developed parcel that totals 4.2 acres in size. Currently, the project consists of one two-story building that houses the City's Police Department, Fire Department administrative staff, Emergency Dispatch (911 call center), and Emergency Operations Control. The site also includes a 42-stall public parking lot, a 100-stall restricted staff parking lot, the City's pump station for Groundwater Well #22, and a K-9 training area.

The Phase I ESA was performed in general conformance with the scope and limitations of the ASTM E 1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the "environmental risk" associated with the site, as defined in the ASTM E 1527-21 Standard, and discussed in the Introduction section of this report.

The project site is bounded by W. Evelyn Avenue and the Caltrain Railroad easement to the northeast, Franking Street to the southeast, Villa Street to the southwest and Oak Street, residential properties, and S. Shoreline Road to the northwest (Figure 2 and Figure 3). Figure 1 depicts the regional location of the project site, Figure 2 is an aerial photograph that shows the local vicinity of the project site, and Figure 3 is an aerial photograph showing the current conditions of the project site. Regional access to the site is provided by State Route 82, SR-85, and US 101. Local access is from W. Evelyn Avenue, Frankin Street, Villa Street, and Oak Street (Figure 2 and 3).

The objective of a Phase I ESA is to assess whether "recognized environmental conditions" (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the project site. Our conclusions are intended to help the user evaluate the "business environmental risk" associated with the project site. Our opinion regarding a REC's potential impact on the project site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, and our experience evaluating similar sites.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)

The ASTM E 1527-21 Standard defines an REC in part (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, or, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the subject property under conditions that pose a material threat of a future release to the environment."

8. Findings and Conclusions

No RECs were identified related to activities on the project site. However, there is the potential for the migration of soil vapors and/or groundwater from the adjacent properties to the east to have impacted the project site, as discussed in detail in Section 4.2.8. Therefore, this is considered a vapor encroachment condition (VEC) on the project site and is also identified as a REC.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)

The ASTM E 1527-21 Standard defines an HREC as "a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the property to any required controls (for example, activity and use limitations or other property use limitations)."

No HREC were identified for the project site.

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS (CRECS)

The ASTM Standard defines A CREC as "a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."

This assessment has revealed no evidence of CRECs in connection with the project site.

BUSINESS ENVIRONMENTAL RISK (BER)

The ASTM E1527-21 Standard include "additional issues" that are non-scope considerations outside of the scope of the ASTM Phase I practice and are defined as "business environmental risk." Issues considered are asbestos-containing materials (ACM), radon, lead-based paint, lead in drinking water, indoor air quality, and mold, among others. Although these items were not included in this Phase I ESA report, some initial observations are made.

Because of the age of the building (1980) and the fact that lead-based paint (LBP) was banned in 1978, the presence of LBP in the building is unlikely. Similarly, results provided in Section 2.3.3 indicate that radon is not likely to be of concern at the project site. Although the use of asbestos in most building materials was banned by 1977, it may be present in some materials, such as drywall joint compound, window glazing, and sheet vinyl flooring up until 1997. According to NESHAP regulations, sampling for potential ACM is required prior to any renovation or demolition activities, regardless of the date of construction. Therefore, it is recommended that an asbestos survey be conducted prior to demolition activities.

SUMMARY AND RECOMMENDATIONS

Based on the results of this Phase I ESA, PlaceWorks concludes that there is a REC at the project site due to the potential for vapor encroachment from the adjacent properties to the east. Therefore, it is recommended that a Phase II ESA investigation be conducted to determine if soil vapor, groundwater concentrations, and/or indoor air concentrations at the subject site exceed the DTSC screening criteria for commercial use.

9. Credentials

We declare to the best of our professional knowledge and belief that we meet the definition of Environmental Professional as defined in the ASTM Standard. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the project site property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Qualification information for the project personnel is provided in Appendix E.

Cathleen Fitzgerald, PE
Senior Engineer, PlaceWorks

May 11, 2024

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PlaceWorks were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1926 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 02/29/2024 has revealed that there are 2 NPL sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal Delisted NPL sites

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 02/29/2024 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 01/29/2024 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a

given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/29/2024 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 02/13/2024 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 01/22/2024 has revealed that there are 17 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 7 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there are 25 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CA CUPA Listings list, as provided by EDR, has revealed that there are 32 CA CUPA Listings sites within approximately 0.25 miles of the target property.

CA DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the CA DRYCLEANERS list, as provided by EDR, has revealed that there is 1 CA DRYCLEANERS site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 12 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Pathway: GROUND WATER PATHWAY
Scoring: 2

Summary Details:

Conditions at proposal October 15, 1984): Teledyne Semiconductor has manufactured semiconductors on a 1-acre site in Mountain View, Santa Clara County, California, since 1962. In December l982, Teledyne reported to the California Regional Water Quality Control Board CRWQCB) that soil and ground water near an underground storage tank were contaminated with solvents, including trichloroethylene. An investigation in June 1984 revealed that the contaminants had migrated to the northand affected approximately 50 private domestic wells. Local agencies and the company have provided alternative sources of drinking water for the affected residences. About 116,000 people depend on wells within 3 miles of the site as a source of drinking water. The company is working with CRWQCB to determine the extent of the contamination and to develop interim hydraulic controls to prevent further migration of the contaminants. The facility received Interim Status underSubtitle C of the Resource Conservation and Recovery Act RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxicchemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status February 1986): CRWQCB, in conjunction with EPA and the California Department of Health Services, is considering various response actions at the site. This site remains in proposed status until EPA implements the appropriate elements of its final policy for placing RCRA-related sites on the NPL and then applies the policy to this site. Status July 22, 1987): Subsequent investigation revealed that this site is not subject to the Subtitle C permitting requirements of RCRA. Its score on the Ha ard Ranking System, which EPA uses to evaluate sites for the NPL, is above the cutoff point of 28.50, and EPA received no information that prevents placing the site on the NPL. Therefore, it is being placed on the NPL. Teledyne is planning on pumping the contaminated ground water in the upper aquifer to the surface for subsequent treatment.

Historic Generators:
Receive Date: 19960901
Handler Name: MICROCHIP TECHNOLOGY INC
Federal Waste Generator Description: Large Quantity Generator
State District Owner: Not reported
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: No
Non Storage Recycler Activity: Not reported
Electronic Manifest Broker: Not reported

Receive Date: 20010403
Handler Name: MICROCHIP TECHNOLOGY INC
Federal Waste Generator Description: Not a generator, verified
State District Owner: Not reported
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: Yes
Non Storage Recycler Activity: Not reported
Electronic Manifest Broker: Not reported

Receive Date: 19900330
Handler Name: TELEDYNE COMPONENTS
Federal Waste Generator Description: Large Quantity Generator
State District Owner: Not reported
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: No
Non Storage Recycler Activity: Not reported
Electronic Manifest Broker: Not reported

Receive Date: 19920221
Handler Name: TELEDYNE COMPONENTS
Federal Waste Generator Description: Small Quantity Generator

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

Summary Details:

Conditions at proposal June 24, 1988): Spectra-Physics, Inc. SP) has manufactured electronic equipment and gas lasers on Terra Bella Boulevard and Middlefield Roads in Mountain View, Santa Clara County, California, since 1961. The 11.5-acre site consists of nine buildings in a light industrial complex. SP uses a variety of cleansers, degreasers, and lubricants in its manufacturing processes, including isopropyl alcohol, acetone, methyl alcohol, trichloroethylene TCE), Freon, 1,1,1-trichloroethane TCA), and Solvasol Solvent 360. In an inspection conducted in 1981, the California Regional Water Quality Control Board CRWQCB) found that areas where ha ardous wastes were stored had no dikes or systems to collect leachate; rusty barrels were also found on-site. Ground water investigations began at the SP facility in September 1984 after tests at Teledyne Semiconductor adjacent and downgradient of SP) indicated possible upgradient sources of contamination. The Teledyne site was placed on the NPL in July 1987.) Soil and ground water collected at SP contained TCE, TCA, and 1,2-dichloroethylene. SP s plume of contaminated ground water has merged with

SPECTRA-PHYSICS, INC. (Continued) **1000181197**

Teledyne s and migrated off-site. More than 200 private drinking water wells had been drilled into the 1-square-mile plume. Most wells have been closed; 47 were found contaminated above State Action Levels. The owners now obtain water from municipal water supplies. An estimated 189,000 people obtain drinking water from public and private wells within 3 miles of the site. Teledyne is operating two extraction wells on-site -- one in the shallow one and one in the intermediate one. The wells pump the water to the surface and discharge it to the sanitary sewer; the ground water is not treated before discharge. SP will evaluate the effectiveness of this system in preventing its on-site plume from migrating off-site. Both companies are jointly designing an off-site extraction system. San Francisco Bay 2.5 miles downstream of the site) is used for recreational activities. Permanente Creek is tidally influenced within 1 mile of the site. Several species of birds designated as endangered species by the U.S. Fish and Wildlife Service are found within the area of tidal influence. Status February 11, 1991):
In February 1990, SP installed a vapor extraction system to reduce concentrations of contaminants in soil. Underan order issued by CRWQCB, SP conducted a remedial investigation/feasibility study RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. The RI/FS was completed in December 1990. In February 1991, CRWQCB will adopt a final cleanup and abatement order requiring SP to implement the best remedial alternative evaluated in the RI/FS. This alternative will include expanding the existing soil vapor extraction system and the ground water extraction system. In April 1991, EPA will complete a Record of Decision describing the selected remedy.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 06/11/2015
Comments: The Results of Sub-Slab Soil Vapor Assessment report presents the findings of a sub-slab soil vapor assessment that was performed by the Site owner to determine whether former operations by Austin's Fremont Laundry impacted the Site. Sub-slab sampling of soil vapor was performed at six locations in the building that occupies the Site. Elevated concentrations of tetrachloroethene (PCE) were detected in the soil vapor samples. The highest PCE concentrations were detected on the eastern side of the building and were about an order of magnitude lower on the western side of the building.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Soils Management Plan
Completed Date: 10/15/2020
Comments: The SMP provides administrative and work protocols to protect human health and the environment during potential future redevelopment activities and post occupancy sub-slab activities such as utility repairs and concrete replacement for on site construction workers.

Discharge Source:	Other
Discharge Cause:	Unknown
Stop Method:	Change Operating Procedures
Stop Description:	Removal of dry cleaning equipment (facility closure)
No Further Action Date:	12/21/2016
CA Water Watershed Name:	Santa Clara - Palo Alto (205.50)
Dwr Groundwater Subbasin Name:	Santa Clara Valley - Santa Clara (2-009.02)
Disadvantaged Community:	Not reported
CA Enviroscreen 3 Score:	1-5% (lowest scores)
CA Enviroscreen 4 Score:	15-20%
Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	The suite 860 Villa Street was previously operated as dry cleaning operations from at least 1960 until approximately 1998 until being vacated by the most recent tenant, Careful Cleaners. It has been reported that the dry cleaner closed and vacated the facility without formal inspection by the City of Mountain View Fire Department. A Phase I Site assessment was conducted in September, 2014. Additional investigations at the site were conducted in November, 2014 and March, 2016. A Site Conceptual Model (SCM) for the site was drafted on October, 2016. The data collected at the site indicates the following conditions were reported at the site at the time of closure: - Soil: 0.60 parts per million (ppm) tetrachloroethene (PCE). - Groundwater: 12 parts per billion (ppb) PCE, 3.4 ppb trichloroethene (TCE), and 0.99 ppb Cis 1,2-Dichloroethene. - Soil Vapor: 1,300 micrograms per cubic meter (g/m3) PCE, 4.4 g/m3 dichlorodifluoromethane (DCFM), 4.4 g/m3 chloroethane, and 10 g/m3 chloroform.

Eval Notes: On-site to conduct a hazardous waste generator inspection. This inspection commenced on 2/22/2022 and concluded on 2/25/2022 with the issuance of this report. Facility is a staging facility for Google Store displays. Facility has an electrical workshop area with one soldering station, and a model shop which utilizes various machines such as laser cutters, 3D printers, and sand blasters. Per Mr. Eng, sand blasters are not used with metals, and are utilized to sand blast cured 3D printer products. Observed the following hazardous wastes accumulating during this inspection: Electrical Workshop: 1 x 5 gal step can containing solder/IPA contaminated debris Model Shop: 2 x 5 gal step cans containing Debris contaminated with 3D printer resin 1 x 5 gal carboy containing IPA/Acetone & 3D printer resin NOTES: Waste ID number CAL000404918 is ACTIVE Fire extinguishers maintained as of March 2021 Spill Kits and Eye wash available on-site in electrical workshop and model [Truncated]

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	Site History: - Courtyards, is an 11.92 acre business park that was developed with three stand-alone buildings and a series of connected buildings surrounding multiple courtyards. The property was originally developed as a cannery in 1887. A major site redevelopment was undertaken in 1985 and completed in 1987, which included the demolition of several on-site buildings including homes and the large former cannery, the complete renovation of all remaining buildings, and the construction of the present-day building at 1200 Villa Street. A total of eight USTs may have been located on the property (Tanks A through H). Tank A - The capacity of Tank A was approximately 10,000 gallons (some documents note a capacity of 35,000 gallons) and was used to store bunker fuel oil. The UST was located in the north central portion of the site. 1985 In approximately March 1985 two soil samples were collected from holes which had been cut through the base of the tank. The soil samples were collected from the backfill material immediately beneath the UST. The maximum detections in soil were 10,000 ppm oil, 2,000 ppm diesel fuel, 34 ppm xylenes, 9 ppm toluene and 350 ppm volatile hydrocarbons. 1987 - Tank A was likely removed in approximately 1987. 1998 - On April 28, 1998 a soil and groundwater sample was collected from Geoprobe boring SB-5 located in the center of the former UST excavation. The soil sample was collected at 14.5 feet bgs and was ND

COURTYARD BUSINESS PARK (Continued) **S109517574**

for all constituents. The groundwater sample detected TPH-diesel at 870 ppb and TPH-motor oil at 890 ppb. In addition 1,1 Dichloroethene, Tetra-chlorethene, and 1,1,1-Trichloethane was detected at 2, 1, and 3.2 ppb, respectively. 2008 - On January 18, 2008 a soil and groundwater sample was collected from boring SB-03-05. The soil sample detected 25 ppm TRPH and 0.022 ppm toluene. Several metals were detected, but none were above their respective Environmental Screening Levels (ESLs). The groundwater sample detected 35 ppb TRPH and 0.84 ppb toluene. Several VOCs were analyzed and determined to be below the detection limit. On October 18 2008 five soil borings were installed to depths of 20 to 24 feet bgs. Soil and groundwater samples were collected from each of the borings. All of the soil samples were ND except for the samples collected from boring B-2 which detected up to 8.4, ppm TPH-g, 4,400 ppm TPH-d, and 230 ppm motor oil. BTEX constituents were ND. Groundwater samples were all ND except for the sample collected from boring B-2 which detected 10,000 ppb TPH-d and 1,100 ppb motor oil. BTEX and TPH-g constituents were ND. 2009 During July and August 2009 three groundwater monitoring wells were installed and sampled, and grab groundwater samples were collected from borings GW-B-1 and GW-B-2. All samples were ND for all petroleum compounds with the exception of MW-2 which detected 53 ppb TPH-d and 100 ppb TPH-motor oil. There were several VOC detections, but none were reported above ESLs. 2009 to 2010 Three groundwater monitoring events took place between the third quarter of 2009 through the first quarter of 2010. The highest detected petroleum compound concentrations were 84 ppb TPH-d, 120 ppb TPH-motor oil. Several VOCs including chloroform, tetrachloroethene (PCE), 1,1,1 trichloroethane, and naphthalene were detected at concentrations below ESLs. Tanks B and C - Tanks B and C may have been located to the northeast of building 1200. Tank C is shown on some file documents as located next to the southeast corner of building 1200. One of the tanks was described as a 10,000 gallon fuel UST. The exact location and a determination that the USTs were removed cannot be made. In 2008, a geophysical survey was conducted in this area of the property with the focus on locating USTs and no anomalies that could be interpreted as a possible UST or similar buried feature were identified. 1998 - Two soil borings were constructed near the southeast corner of building 1200. The report stated that the precise location of the UST was not found and that it was not known if the UST had been removed. The soil samples detected up to 100 ppm TPH-motor oil and 18 ppm TPH-d. The groundwater sample from SB-4 640 ppb TPH-d, but was ND for all other constituents. 2008 - On January 18, 2008 two borings (SB-06-05 and SB-07-05) were constructed and soil and groundwater samples were collected near the location of the USTs (northeast of building 1200). The soil sample detected 11 ppm TRPH. The groundwater sample detected up to 15 ppb TRPH, 1.1 ppb toluene, and 0.93 ppb xylenes. Several VOCs were analyzed and determined to be below the detection limit. All detected analytes were below the associated ESLs. 2009 - In July 2009, to evaluate groundwater quality in the northeastern area of the property near Tank A, three monitoring wells were installed. These wells are down-gradient from the inferred locations of Tanks B and C. Results from four consecutive sampling events at these wells are described above under Tank A . It should be noted that the location of Tanks B and C was shown in different locations by documents in the project file. It should also be noted that there is not evidence demonstrating that there was a release from the USTs. Tanks D-G and

COURTYARD BUSINESS PARK (Continued) **S109517574**

Grease Pit - Tanks D through G were reportedly located in the southwestern portion of the site and used to store alcohol. Due to the lack of documentation, the volume, exact location and a determination that the USTs were removed cannot be made. 1985 - Tanks D and E were reportedly removed in 1985. Soil samples were collected in approximately April 1985 at the base of both UST excavations. The samples were composited and analyzed for VOCs. None of the samples detected VOCs above their respective ESLs. 1998 - Two soil borings were constructed in the approximate location of the former UST locations. The soil samples did not detect petroleum hydrocarbons or VOCs. The groundwater sample collected from SB-2 was ND for all analytes. The groundwater sample from SB-1 detected 0.71 ppb chloroform, but was ND for all other constituents. The ESL for chloroform is 70 ppb. Historic records indicate that a grease pit may have existed to the north of the USTs within the footprint of the existing building. Tanks F and G may still be situated in the ground in the vicinity of building 1350. 2009 - A groundwater sample was collected immediately adjacent to the building near the inferred location of the grease pit. The groundwater sample GW-B-1 was ND for all constituents with the exception of 1.1 ppb 1,1,1-TCA and 2.1 ppb PCE, both of these detections are below their respective ESLs. Tank H - Tank H was presumably located near the southwest corner of building 1380. However, a report prepared in 1998 states that the UST is located on the adjacent property. Due to the lack of documentation, the volume, exact location and a determination that the UST was removed cannot be made. 2008 Two soil borings were installed (SB-01-05 and SB-02-05) near the northwestern corner of building 1350. The soil samples detected up to 34 ppm TRPH and 0.013 ppm toluene. All other constituents were ND. Groundwater samples detected up to 19 ppb TRPH, 1.7 ppb toluene, 0.98 xtlenes, and 1.2 ppb 1,1,1-Trichloroethane. 2009 - A groundwater sample (GW-B-2) was collected near former Tank H. The results show that it was ND for all constituents. Summary Tanks B-H - The reports in the file do not present information that can be used to conclusively determine the exact location, description, and status of all potential USTs. In addition, there is not information in the file providing eye witness accounts regarding the condition of the USTs at the time they were removed. Consequently, the DEH cannot state that the USTs did not have a release. The DEH can state that based on the information in the file there is not information that demonstrates that the USTs had a release.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	22 CCR 12 66262.23(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)
Violation Description:	Failure to properly complete the Uniform Hazardous Waste Manifest.
Violation Notes:	Returned to compliance on 04/03/2017. Observed numerous manifests indicating that facility shipped a non-RCRA hazardous waste which does not have a U.S. DOT description but failed to provide a generic name following the phrase Non-RCRA Hazardous Waste, Solid or Non-RCRA Hazardous Waste, Liquid . [CCR 66262.23]. For examples see the following manifests: 008626782FLE Shipped on 8-15-16. 008628531FLE Shipped on 5-26-16. 008666842FLE Shipped on 11-1-16. Send in correction letters for all manifests that were incomplete due to failure to include a generic description.

Violation Program:	HWLQG
Violation Source:	CERS,

Site ID:	109438
Site Name:	CVS Pharmacy #7774
Violation Date:	03-03-2017
Citation:	22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description:	Failure to provide employees with hazardous waste training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at

CVS PHARMACY #7774 (Continued) **S121738731**

	least three years from the date the employee last worked at the facility.
Violation Notes:	Returned to compliance on 04/03/2017. Newly hired assistant store operations is not sufficiently trained on management of hazardous waste. Since last store manager left approximately 1 month ago, no sorting of the unwanted/damaged/expired items has been performed due to her not being familiar with how to operate the waste determination/ scanning system.

Violation Date:	03-03-2017
Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description:	Failure to determine if the waste generated is a hazardous waste.
Violation Notes:	Returned to compliance on 04/03/2017. Facility has failed to perform hazardous waste determinations on items sitting in boxes labeled as damaged or leaking items. Per assistant store operations, items have been there at least 2 weeks but possibly up to a month, since last manager left. Additionally observed other areas and unmarked boxes that appear to be collecting damaged or unwanted items that would meet hazardous waste criteria at point of disposal.

Eval Type: Routine done by local agency
Eval Notes: Stand-alone store and pharmacy. Store generates various hazardous wastes. Store inventory includes many hazardous materials that, if and when they become wastes, would be state or federal hazardous wastes. Examples include: Aerosols (sunscreen, pesticide, muscle rub, skin protectants), insecticides, Cleaning (eg corrosive CLR, Lime away), beauty products containing hydrogen peroxide, zinc based skin protectants, metal containing vitamins, phenol containing throat spray, rubbing alcohol, etc. The pharmacy generates waste pharmaceuticals and examples of potential RCRA hazardous wastes include: insulin (cresol), Warfarin, Selenium. CVS has a barcode

CVS PHARMACY #7774 (Continued) **S121738731**

scanning system directing pharmacy staff where to place unwanted pharmaceuticals. Pharmacy utilizes Genco for return distribution of pharmaceuticals. Pharmacist, Anant Shanbhag, indicated that all expired pharmaceuticals are sent to reverse distributor and there are no restrictions. Liquids and aerosols are also sent to [Truncated]

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-04-2023
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site with Karly Becker of HMCD, to conduct routine hazardous waste inspection with general manager, Dave Ikeda. Inspection began on 5/3/2023 and concluded today with delivery of this report. Facility is a machine shop that works mostly with aluminum, copper and stainless steel. There are 14 CNC machines and 4 milling

SQUAGLIA MFG. (Continued) **S121747496**

machines/lathes. Observed the following wastes on site: 4 x 55 gallon drums of oily water EPA ID# CAL000156841 is active Fire extinguishers have been serviced Spill control is available on site Rags are serviced by Aramark Scrap metal is collected and recycled Bead blaster on site is no longer in use Facility has a evaporator unit that evaporates water from used coolants and mop water. At the end of the process, the remaining waste is picked up by a registered waste hauler. This treatment of hazardous waste is permitted with Mountain View Fire Department. Manifests were reviewed on site

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site ID: 100993
Site Name: C.K. Tool Company, Inc.
Violation Date: 09-17-2020
Citation: Un-Specified
Violation Description: Business Plan Program - Administration/Documentation - General Local Ordinance
Violation Notes: Location: This facility is currently operating without a hazardous materials permit which expired on 5/1/2020. In order to return to compliance you must complete the following objective: 1. Pay the hazardous materials permit fees for the 2020/2021 permit cycle. Please contact me if you need a copy of the invoice. 2. Update and certify the hazardous materials business plan in CERS. Please contact my office if you need assistance with this step.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-31-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Onsite for routine inspection, noted the following: -Machine shop works with aluminum, plastics and some stainless parts -Waste oil is generated from machine operations -Floor Sweep absorbent materials is used for small spills around equipment -2 x 55 gallon drums are stored closed in back of shop with label details available -Provided Emergency Procedure poster today; it was filled out today -Manifests available for waste oil pick-up; Maximum oil service Note: Discussed dry and wet operations with metals; Kevin and empoloyee stated that 90% of all jobs are aluminum, the remainder being plastic and stainless steel which are tumbled in the shed in back of the shop. Please make sure to review in detail the waste metals that may be present in the slurry from tumbling operations. A separate email with california metal criteria for hazardous waste will be send to Kevin Dean, Director of Operations. No violations were noted today, thank you. Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tons: 0.18765

Year: 2013
Gepaid: CAD981172109
TSD EPA ID: CAD008252405
CA Waste Code: 221 - Waste oil and mixed oil
Disposal Method: H061 - Fuel Blending Prior To Energy Recovery At Another Site
Tons: 0.114

Year: 2012
Gepaid: CAD981172109
TSD EPA ID: CAD008252405
CA Waste Code: 133 - Aqueous solution with total organic residues 10 percent or more
Disposal Method: H061 - Fuel Blending Prior To Energy Recovery At Another Site
Tons: 0.45036

Year: 2011
Gepaid: CAD981172109
TSD EPA ID: CAD008252405
CA Waste Code: 133 - Aqueous solution with total organic residues 10 percent or more
Disposal Method: H061 - Fuel Blending Prior To Energy Recovery At Another Site
Tons: 0.3753

Year: 2010
Gepaid: CAD981172109
TSD EPA ID: CAD008252405
CA Waste Code: 133 - Aqueous solution with total organic residues 10 percent or more
Disposal Method: H061 - Fuel Blending Prior To Energy Recovery At Another Site
Tons: 0.47955

Year: 2010
Gepaid: CAD981172109
TSD EPA ID: CAD008252405
CA Waste Code: 221 - Waste oil and mixed oil
Disposal Method: H061 - Fuel Blending Prior To Energy Recovery At Another Site
Tons: 0.209

Year: 2009
Gepaid: CAD981172109
TSD EPA ID: CAD008252405
CA Waste Code: 133 - Aqueous solution with total organic residues 10 percent or more
Disposal Method: H061 - Fuel Blending Prior To Energy Recovery At Another Site
Tons: 0.22935

Year: 2008
Gepaid: CAD981172109
TSD EPA ID: CAD980887418
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.04

DUNNS AUTOMOTIVE SERV INC (Continued) **1000318940**

Year: 2005
Gepaid: CAD981172109
TSD EPA ID: NVD980895338
CA Waste Code: 352 - Other organic solids
Disposal Method: T03 - Treatment, Incineration
Tons: 0.1

Year: 2002
Gepaid: CAD981172109
TSD EPA ID: CAD008252405
CA Waste Code: 214 - Unspecified solvent mixture
Disposal Method: R01 - Recycler
Tons: 0.0792

Violations:
Site ID: 86952
Site Name: Young s Automotive Service
Violation Date: 03-11-2020
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 03/24/2020. According to the Hazardous Waste Tracking System (HWTS), facility's State ID number CAL000029608 is INACTIVE. Hazardous waste generators must maintain an active ID number. Submit form 1358 to DTSC and follow all instructions regarding the electronic Verification Questionnaire to submit required information online. Form 1358 was provided during this inspection.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 86952
Site Name: Young s Automotive Service
Violation Date: 03-11-2020
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 04/22/2021. During consolidated manifest review, Mr. Young stated that he will request pickups for the used oil as necessary. According to the consolidated manifests, the facility will receive a pickup of used oil approximately once a year. Additionally, observed 1 x 55 gal poly drum of brake fluid waste in the hazardous waste storage area with no markings. When asked about this container, Mr. Young stated that he accumulates brake fluid very slowly and has never had to have a pick up of the waste brake fluid. Consolidated manifest review confirms no pick up of any waste brake fluid occurring since 2017. Ensure that hazardous wastes are not held

YOUNG'S AUTOMOTIVE (Continued) **S101309023**

	on-site for longer than 180 days.
Violation Division:	Santa Clara County Environmental Health

Violation Date:	03-11-2020
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 12/29/2020. Observed 1 x 30 gal drum containing paper filter waste that was open. No waste was being added or removed at the time of this inspection. No lid could be observed that would fit the container. Ensure that all containers that contain a hazardous waste are kept closed while not adding or removing waste.

Violation Date:	03-11-2020
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste",

YOUNG'S AUTOMOTIVE (Continued) **S101309023**

	name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 12/29/2020. Observed the following containers holding a hazardous waste were missing all required markings: 7 x 55 gal steel drums of used oil in the hazardous waste storage area with blank hazardous waste labels 2 x 30 gal steel drums of paper filter waste in the hazardous waste storage area with no labels 1 x 55 gal poly drum of waste brake fluid in the hazardous waste storage area with no label Ensure that all containers that hold a hazardous wastes are marked with all required markings, including the words "HAZARDOUS WASTE", accumulation start date, name and address of the generator, contents, physical state, and hazardous properties of the waste. Labels were provided at the time of this inspection.
Violation Division:	Santa Clara County Environmental Health

Violation Date:	03-11-2020
Citation:	HSC 6.5 25189.5(a),25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a),25201(a)
Violation Description:	Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to HSC 6.5.
Violation Notes:	Returned to compliance on 12/08/2020. According to Mr. Young, scrap metal is typically thrown out as municipal garbage. Scrap metal generated from automotive repair activities has the potential to contain regulated metals at concentrations that would meet the definition of a characteristic toxic hazardous waste. As per 66261.6 (a)(3)(B), scrap metal that is recycled is not subject to hazardous waste regulation. Cease the practice of disposing of scrap metals generated from automotive repair activities as municipal wastes and begin sending scrap metal to a scrap metal recycler.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	86952
Site Name:	Young s Automotive Service
Violation Date:	02-09-2016
Citation:	22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Description:	Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.
Violation Notes:	Returned to compliance on 04/28/2016. Bead blasting material used to blast parts was observed on-site and Mr. Young states that this material is usually thrown away. Determine if media is hazardous waste due to the presence of toxic metals before disposal.

YOUNG'S AUTOMOTIVE (Continued) **S101309023**

Citation: 22 CCR 16 66266.81(a)(4)(B) - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.81(a)(4)(B)
Violation Description: Failure to retain for at least three years a legible copy of each manifest or bill of lading which identifies spent lead-acid storage batteries shipped to a person who stores the batteries or who uses, reuses, recycles or reclaims the batteries or their components.
Violation Notes: Returned to compliance on 04/22/2021. Facility currently stores more than 10 lead-acid battery cores on-site. According to Mr. Young, he will accumulate the battery cores on-site until they are exchanged with Interstate, however, Mr. Young was unable to provide 3 years of shipping records or bills of lading detailing the exchange of the battery cores. Begin maintaining shipping records for lead-acid batteries on-site for three years from the date of shipment.

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 04/28/2016. Observed 6x55 gallon containers of used oil with blank hazardous waste labels.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-11-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a routine hazardous waste generator inspection. Facility is an auto repair shop that provides various auto repair services, including oil changes and coolant flushes. Facility collects waste antifreeze in 1 x 110 gal tank and filters the antifreeze on-site and collects the filtered antifreeze in 1 x 55 gal drum for reuse in older vehicles. The tank collecting the waste antifreeze and the drum that collects the filtered antifreeze are labeled and marked as Excluded Recyclable Material. Facility has a bead blaster on-site, according to Mr. Young, the bead blaster is rarely used and if the blast media is degraded he will add fresh bead blast media. According to Mr. Young, due to the rarity of use, he does not have to change out the blast media and has not had to dispose of it. Facility generates the following hazardous waste streams: Used Oil Antifreeze (Excluded recyclable material) Used oil filters Paper filters Brake fluid Battery [Truncated]

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Inspection conducted with Jeff Higbee. Rags are commercially laundered, absorbent was on site but floor shows little to no evidence of spills and no used absorbent was noted on-site at the time of inspection. Batteries are exchanged with Interstate and fire extinguishers are annually serviced. The following violations were corrected at the time of inspection: 1.) No emergency posting was available on-site. Mr. Young created and posted this emergency posting at the time of inspection. 2.) Labels for Excluded Recyclable Materials of antifreeze (70 gallon container and 110 gallon container) did not have generator information. Mr. Young corrected labels at the time of inspection.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Facility Project Subtype: Not reported
RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)
Site History: In 1983, Union Bank of California took over ownership of the site when Innerconn Technologies, the owner and operator of the site at the time, went bankrupt and defaulted on their loan. Trichloroethylene (or TCE) was discovered in the groundwater at about this time. TCE was a common solvent used and stored by the electronics manufacturing industry. Union Bank conducted a site investigation shortly after inheriting the site. The Board issued Site Cleanup Requirements in 1989 naming Union Bank and Innerconn Technologies as responsible parties. In 1989, the former manufacturing building was razed and a strip mall was built in approximately the same footprint. The strip mall continues to operate today. In 1992, Union Bank installed a pump and treat system to reduce TCE levels and to control off-site migration. In 2001, we allowed Union Bank to turn off the pump and treat system because TCE concentrations had declined and operating the system was no longer necessary. We expect that TCE concentrations will continue to decline over time due to natural degradation processes. While TCE concentrations are still above the drinking water cleanup goals, the residual contamination does not present an immediate threat to human health or the environment because the concentrations are relatively low, the groundwater plume is not migrating, and the shallow groundwater aquifer in this area is not currently used for any purpose.

Name:	ENGELHARD
Address:	333 MOFFETT BLVD
City,State,Zip:	MOUNTAIN VIEW, CA 94043
Region:	STATE
Facility Status:	**Completed - Case Closed**
Status Date:	07/21/2011
Global Id:	SL18395815
Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number:	Not reported
Latitude:	37.3979996855448
Longitude:	-122.075164318085
Case Type:	Cleanup Program Site
Case Worker:	AVC
Local Agency:	Not reported
RB Case Number:	43S0285
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
EPA Region:	9
Coordinate Source:	Manual Entry on Screens
Cuf Case:	NO
Quantity Released Gallons:	Not reported
Begin Date:	07/01/1996
Leak Reported Date:	01/02/1965
How Discovered:	* UNK, Site Assessment/Site Investigation
How Discovered Description:	Not reported
Discharge Source:	Other
Discharge Cause:	Other
Stop Method:	Not reported
Stop Description:	Not reported
No Further Action Date:	07/21/2011
CA Water Watershed Name:	Santa Clara - Palo Alto (205.50)
Dwr Groundwater Subbasin Name:	Santa Clara Valley - Santa Clara (2-009.02)
Disadvantaged Community:	Not reported
CA Enviroscreen 3 Score:	31-35%
CA Enviroscreen 4 Score:	15-20%
Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	This site became involved in a soil and groundwater investigation during an assessment of the adjacent upgradient property at 327 Moffett Boulevard in 1986. That property is now owned by Union Bank of California. Solvent was found in groundwater monitoring wells

ENGELHARD (Continued) **S105025095**

constructed on the site during this adjacent site investigation. A Remedial Action Plan report was prepared, submitted to and approved by the Regional Board in 1998. This report concluded that no physical remediation was required for this site and that what solvent impacted soil and groundwater could be remediated using Natural Attenuation. Remediation progress is confirmed by periodic groundwater monitoring. A groundwater monitoring program has been in place at this site since 1996.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	Jasco Chemical Company began production at the Site in 1976. The production process involved repackaging bulk chemicals into small containers and blending compounds to produce proprietary products. Bulk solvents were received and stored on site before and after processing. A preliminary groundwater investigation conducted in June 1984 revealed the presence of chemicals in soil and groundwater of the same type as those used and stored at the Jasco facility. These chemicals included 1,1,1-trichloroethane, acetone, creosote, denatured alcohol, kerosene, lacquer thinner, methanol, methylene chloride and paint thinner. In September 1992, EPA issued a Record of Decision (ROD) to define the necessary action to: Address contaminated soils and groundwater, Prevent any further migration of contaminants into the groundwater, Prevent possible future exposure to the public to contaminated groundwater, Prevent contamination of the drinking water aquifer, and Provide long term protection to human health and the environment. The remedy for the Jasco Chemical Company Superfund Site in Mountain View, California included groundwater extraction and treatment in accordance with the requirements of the ROD (1992) as modified by the Explanation of Significant Difference (ESD) (2002). Soil contamination on the Site was remediated using both excavation with on-site bio-treatment and dual vacuum extraction/soil vapor extraction. The Site was also subject to institutional controls to prevent exposure to future site construction workers and potential future residents. The Site reached construction completion in September 2002. The remedy is functioning as intended by the ROD, as modified by the 2002 and 2012 ESDs, and is considered to be complete. Contaminants remain in Site groundwater as a result of a documented offsite source. The EPA has delisted the site and the Water Board is the lead agency as of 12-2015. Their is a plan to redevelop the property for a residential land use. The Water Board will over see the implementation of the soil management plan and installation of vapor barriers as required.

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	This site has been proposed for listing on the NPL. It is expected that the RP will remediate this site with oversight by EPA. DHS will perform a limited role of oversight and monitoring of the remedial activities at this site. DHS has budgeted $50,000 for oversight and monitoring costs. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project.
Site Description:	The Jasco Chemical Corporation has formulated chemical products at this

JASCO CHEMICAL CORPORATION (Continued) **S105960435**

2.05-acre site in Mountain View since 1976. The site is bordered on the northeast by the Central Expressway and Southern Pacific Railroad, and on the remaining sides by residential units. The facility handles and stores numerous chemicals onsite in underground tanks and 55 gallon drums.

Hazardous Waste Desc: The contaminants detected in the soil and ground water onsite include trichloroethane (TCA), dichloroethane (DCA), dichloroethylene (DCE), phenol and methylene chloride (MCL).

Threat To Public Health & Env: Within a 3-mile radius of the site there are approximately 199,000 people who depend on ground water as a source of drinking water. Contaminants have migrated at least 10 feet beyond the property boundary, as evidenced by the detection of DCA and TCA in an offsite well. Mountain View wells #17 and #10 are located within 1,500 feet and 3,100 feet of the site, respectively.

Site Activity Status: Investigations at the site were initiated in 1984. Both soil and ground water contamination has been detected onsite. Discharges of surface runoff from the rear of the facility appear to be a major source of contaminants. Up to 11,000 parts per million (ppm) paint thinner was detected in soil samples taken near a runoff outfall. Jasco Chemical has been extracting contaminated ground water from one well since February, 1987.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	Case was reopened because site was to be re-developed residentially. The redevelopment would allow for excavation of contaminated soil that remains under the building. Due to lack of notification that redevelopment is moving forward the case was closed again with no activity on 4/20/09. The closure is the same as the previously granted closure. Work plan received and case re-opened 8/17/10.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	01/06/1984
Comments:	In February of 1983, DHS directed LGM to remove the contaminated soil from on and off its property. Several months later, LGM declared bankruptcy and went out of business. In the latter part of 1983 and early 1984, chemicals and contaminated soil were removed from the LGM storage area and an adjacent condominium complex. Post-excavation confirmation samples were taken for fluoride and copper. Detected levels were below health-based risk goals considered safe for residential use.

Completed Date: 10/01/2015
Comments: The Response Plan selects installation of a vapor mitigation system, which includes a passive venting system and a vapor barrier, as the response action for the site. The planned development project is expected to include excavation of soil to 13 feet below the entire footprint of the building that is to be constructed to accommodate a subterranean parking lot.

YIELDUP INTERNATIONAL, INC. (Continued) **S103996492**

not completing a Phase I Checklist. However, the available documentation found by DTSC while performing this site screening did not indicate any releases of hazardous substances have occurred on the Site. This finding is corroborated by the Phase I ESA, which was conducted by ERAS in June 2014 and found no indication of spills or improper storage of hazardous materials. The Church of Scientology currently occupies the Site. Based on the documentation found and reviewed during this site screening, DTSC recommends No Further Action for the Site.

Project Manager Lead:	Not reported
Supervisor:	Not reported
Facility Size:	Not reported
Facility Status:	CLOSED
Activity Type:	Closure Administrative
Final Date:	Not reported
Type:	RCRA
Title Description:	Closure of a Non TSDF Facility
Due Date:	Not reported
Comments:	There were no files or information in any of the databases indicating that this facility ever had TSDF status or applied for a permit. No paper files were found. Project information in cleanup envirostor states that this site was sold in 1994 and is currently occupied by a church. This facility is being administrative closed due to no information indicating TSDF status.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/30/1993
Comments: Former 100 by 300 foot orchard developed with commercial offices under City permit which conditioned approval on preparation of a PEA Report. PEA that was prepared indicated 1-3 ppm DDT in top 6 inches of soil. Subsequently, City of Mountain View oversaw soil removal by developer.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 06/29/1990
Comments: Completed Site Screening. The property is presently a residential parcel in an area of mixed land use. The site was an orchard with a home, other buildings, and a storage shed. Sample results showed DDT, DDD, and DDE. in surface soil exceeding the TTLC. The developer proposed to excavate soil, encapsulate under a soil cap, and asphalt concrete paving. Residual soil sampled to confirm decontamination.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	04/11/2001
Comments:	DTSC completed a Site Inspection Re-Assessment for the U.S. Environmental Protection Agency. As the lead regulatory agency for the Site, DTSC had approved a Removal Action Workplan for the Site on October 30, 1998. It was noted in the Site Inspection Re-Assessment that implementation of the Removal Action Workplan had been significantly delayed due to the City of Mountain View's building permit process and the Site owner's funding problem for construction of the multifamily residential buildings. Based on the Site Inspection Re-Assesment it was determined the Site did not qualify for further remedial site assessment under the Comprehensive Environmental Response, Compensation, and Liability Act.

Completed Area Name:	PROJECT WIDE

Comments: The Department of Toxic Substance Control (DTSC) has reviewed the Cal West Properties (Sierra Vista) Inspection Report (Report). The Report documented that a cap inspection was performed on July 2, 2020. The property was found to be in compliance with the restrictions and requirements of the Land Use Covenant (LUC) and that the cap is in good condition. Therefore, DTSC approves the report. In order to return to the schedule previously established for annual inspections, the next inspection report is due February 3, 2021. -EC, 10/2/2020

Completed Document Type: Site Screening
Completed Date: 04/11/2001
Comments: DTSC completed a Site Inspection Re-Assessment for the U.S. Environmental Protection Agency. As the lead regulatory agency for the Site, DTSC had approved a Removal Action Workplan for the Site on October 30, 1998. It was noted in the Site Inspection Re-Assessment that implementation of the Removal Action Workplan had been significantly delayed due to the City of Mountain View's building permit process and the Site owner's funding problem for construction of the multifamily residential buildings. Based on the Site Inspection Re-Assesment it was determined the Site did not qualify for further remedial site assessment under the Comprehensive Environmental Response, Compensation, and Liability Act.

Quarterly Update:	Teledyne, Inc. originally operated their facility under Tiered Permitting but submitted a Part A application on 11/19/1980 and received an ISD on 4/6/1981. Over the years Teledyne applied for many permits including variance requests, a Part B, and Permit by Rule. They have also gone through many name changes which include Teledyne Inc, Teledyne Components, Telcom, and finally Teledyne Semiconductor Inc (TSI). By 1994 TSI began looking into closing their Interim Status units and operate as a generator. Microchip Technology Inc. purchased all of TSI's permits in 2001 and now operates the site.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	The Teledyne property is part of a two-property Superfund site along with the adjacent Spectra-Physics property. The responsible parties (RPs) for the Teledyne/Spectra-Physics site completed a Monitored Natural Attenuation (MNA) study in the off-property area north of and downgradient of the site. The MNA study concluded that natural breakdown of the chlorinated volatile organic compounds of concern is occuring naturally and at the same rate as groundwater extraction. As a result, only a few of the off-property downgradient extraction wells were operating mainly to maintain hydraulic control of the plume. The RPs completed a pilot study to test the feasibility of enhanced reductive dechlorination (ERD) and concluded that ERD is feasible with bioaugmentation of the Shallow Zone. Within the last ten years, the RPs detected elevated source areas at the Teledyne property using high resolution technology and continuously logged and screened ERD injection well boreholes. Implementing a full-scale ERD treatability study, they have been and are currently remediating the property with groundwater-CVOC levels dropping from as much as over 80,000 ug/l to low multiples of MCLs. Several rounds of ERD injections successfully cleaned up most of the Shallow Zone at the Teledyne property and the adjacent Spring Street residential area to drinking water standards and the treatability study was even more successful in the underlying Upper and Lower Intermediate Zones. More recently, the RPs also assertively evaluated potential IA VI in the off-property commercial North Bayshore and residential Spring Street areas to conclude that IA VI is not occurring in most of the commercial area and is occasionally occurring in several homes in the residential area. The RPs installed sub-slab depressurization systems in the impacted on-property commercial buildings and offered the affected off-property residents crawl space fans to address the issue.

Background Info:	Teledyne Semiconductor has operated a semiconductor manufacturing facility at this one-acre site since 1962. Chemicals used in the manufacturing process and wastes generated by the process are handled and stored onsite. In 1982, Teledyne notified the RWQCB that soil and groundwater near underground solvent storage tanks was contaminated. Further study revealed that a groundwater contaminant plume had migrated northward and contaminated forty private domestic wells. The contaminants identified in soil and groundwater include trichloroethylene (TCE), dichloroethylene (DCE), Freon-113, dichlorobenzene (DCB), perchloroethylene (PCE), and xylene. About 270,000 people residing within three miles of the site depend on groundwater as a source of drinking water. The groundwater contamination represents a potential threat to municipal and other wells.

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Teledyne, the responsible party, has been conducting remedial activities under and order issued by the RWQCB. DHS has budgeted $50,000 for development, review and approval of a RAP and will seek to recover all actual costs from the responsible parties.
Site Description:	Teledyne Semiconductor has operated a semiconductor manufacturing facility at this one-acre site since 1962. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite.
Hazardous Waste Desc:	In 1982, Teledyne notified the RWQCB that soil and ground water near underground solvent storage tanks was contaminated. Further study revealed that a ground water contaminant plume and migrated northward and contaminated 40 private domestic wells. The contaminants identified in soil and ground water are trichloroethylene (TCE), dichloroethylene (DCE), Freon-113, dichlorobenzene (DCB), perchloroethylene (PCE) and xylene.
Threat To Public Health & Env:	About 270,000 people residing within 3 miles of the site depend on ground water as a source of drinking water. The ground water contamination represents a potential threat to municipal and other wells.
Site Activity Status:	An investigation conducted in June, 1984, revealed that solvents had contaminated private wells to the north of the site. Contaminated wells were closed and an alternate drinking water supply was provided to affected residents. A ground water extraction system was installed onsite and began operating in October, 1986. Characterization of soil and ground water contamination is continuing.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	The site is currently an active Shell-branded service station located on the northwest corner at the intersection of North Rengstorff and Central Expressway. The station facilities consist of a small kiosk, a car wash, three fuel dispenser islands and four underground storage tanks (USTs). Remediation has been conducted since 1991 to address contamination associated with leaking USTs. Remediation activities

SHELL SERVICE STATION (Continued) **1000288537**

included excavation of 1,800 cubic yards of soil, soil vapor extraction, and groundwater extraction. Case closure was previously issued by the County of Santa Clara DEH on April 11, 2005, and fifteen of the twenty existing monitoring wells were destroyed. Remaining wells were maintained by Shell as part of an ongoing groundwater assessment program. The case was re-opened in August 2006 and groundwater extraction resumed until June 2008.

Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	12/28/2007
Comments:	Site characterization completed. VOC groundwater contamination was determined to be form an offsite source. Remediation of the groundwater contamination will not be included as part of the Removal Action Workplan (RAW). The RAW will focus on the mitigation of residual soil VOC and TPH contamination associated with the Catch Basin. The results of the Site groundwater investigation indicates that the source(s) of the VOC groundwater contamination is from off-site and conveyed through the utility corridor.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/06/2023
Date Data Arrived at EDR: 11/07/2023
Date Made Active in Reports: 01/31/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

MOUNTAIN VIEW PUBLIC SAFETY BUILDING
1000 VILLA ST
MOUNTAIN VIEW, CA 94041

TARGET PROPERTY COORDINATES

Latitude (North):	37.395675 - 37° 23' 44.43''
Longitude (West):	122.081509 - 122° 4' 53.43''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	581301.2
UTM Y (Meters):	4138959.0
Elevation:	72 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50005371 MOUNTAIN VIEW, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

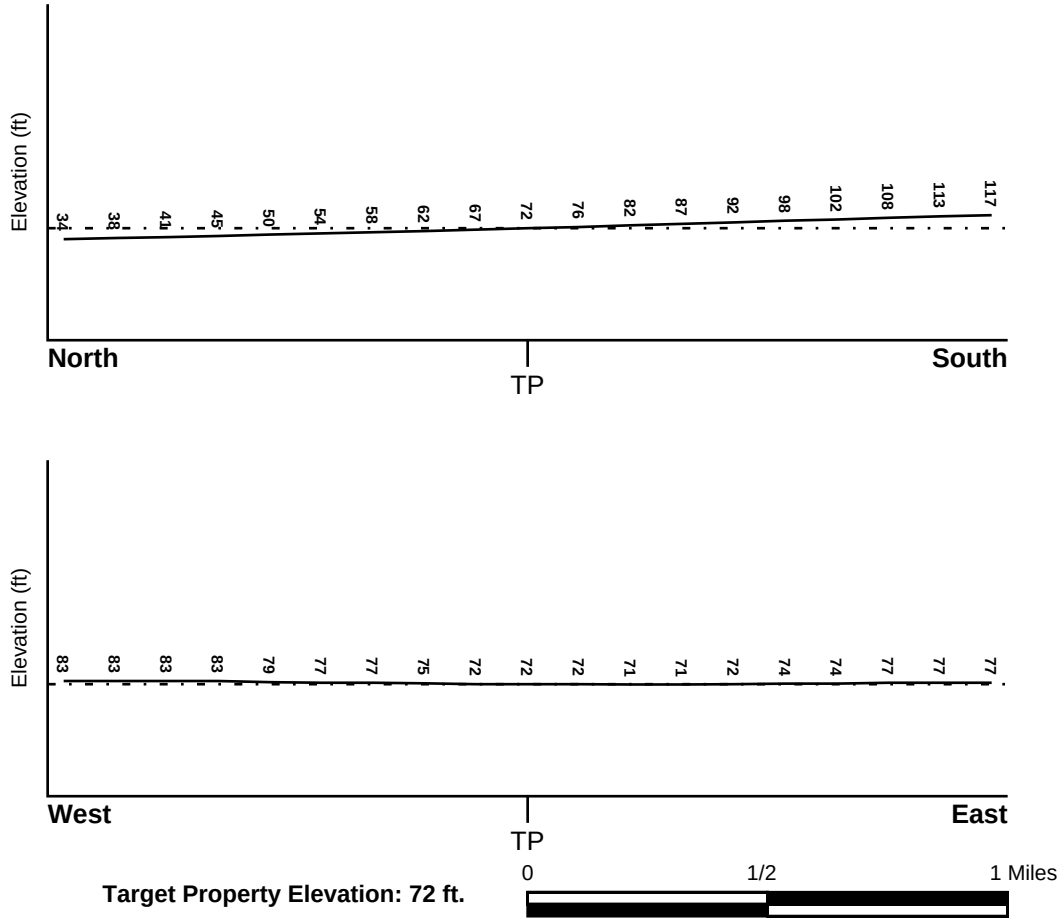
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 72 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06085C0039H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06085C0036H	FEMA FIRM Flood data
06085C0037H	FEMA FIRM Flood data
06085C0038H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNTAIN VIEW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile NNE
Site Name:	JASCO CHEMICAL CO
Site EPA ID Number:	CAD981677107
Groundwater Flow Direction:	North-Northeast
Measured Depth to Water:	13.5 to 15 feet, 20 to 23.5 feet, and 26 to 29 feet in three discrete perched zones at the site.
Hydraulic Connection:	The upper perched aquifers and lower aquifer at the site are separated by a dense blue clay aquitard, although aquifer interconnections exist in the site vicinity.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Guidance Messages

- **Warning:**
  1. Hazardous Material Inventory - Data Element "Federal Hazard Category = Fire" for material "Pump Oil", location "3" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  2. Hazardous Material Inventory - Data Element "Federal Hazard Category = Fire" for material "Bromacide Tablets", location "1" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  3. Hazardous Material Inventory - Data Element "Federal Hazard Category = Acute Health" for material "Antifoulant B-52", location "1" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  4. Hazardous Material Inventory - Data Element "Federal Hazard Category = Reactive" for material "Primers", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  5. Hazardous Material Inventory - Data Element "Federal Hazard Category = Fire" for material "Hydraulic Fluid", location "5" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  6. Hazardous Material Inventory - Data Element "Federal Hazard Category = Acute Health" for material "SweetÕs 7.62 Solvent", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  7. Hazardous Material Inventory - Data Element "Federal Hazard Category = Fire" for material "ShooterÕs Choice LR004 Lead Remover", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  8. Hazardous Material Inventory - Data Element "Federal Hazard Category = Acute Health" for material "ShooterÕs Choice Quick Scrub III -", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  9. Hazardous Material Inventory - Data Element "Federal Hazard Category = Fire" for material "ShooterÕs Choice Copper Remover", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  10. Hazardous Material Inventory - Data Element "Federal Hazard Category = Fire" for material "ShooterÕs Choice MC#7 Bore Cleaner", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  11. Hazardous Material Inventory - Data Element "Federal Hazard Category = Chronic Health" for material "FP-10 Lubricant Elite", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  12. Hazardous Material Inventory - Data Element "Federal Hazard Category = Acute Health" for material "Gunscrubber-Aerosol", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  13. Hazardous Material Inventory - Data Element "Federal Hazard Category = Acute Health" for material "Gun Scrubber", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  14. Hazardous Material Inventory - Data Element "Federal Hazard Category = Fire" for material "Break-Free CLP Liquid (Non-Chlorina", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  15. Hazardous Material Inventory - Data Element "Federal Hazard Category = Chronic Health" for material "Break-Free Lubricant/Preservative", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  16. Hazardous Material Inventory - Data Element "Federal Hazard Category = Fire" for material "Assorted Flammable & Combustible Li", location "2" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  17. Hazardous Material Inventory - Data Element "Federal Hazard Category = Chronic Health" for material "Safety Ultrasonic Weapon Cleaning S", location "6" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  18. Hazardous Material Inventory - Data Element "Federal Hazard Category = Fire" for material "Safety Ultrasonic Weapon Lubricatin", location "6" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  19. Hazardous Material Inventory - Data Element "Federal Hazard Category = Reactive" for material "Detonating Cord", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  20. Hazardous Material Inventory - Data Element "Federal Hazard Category = Reactive" for material "Non-metallic Boosters", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  21. Hazardous Material Inventory - Data Element "Federal Hazard Category = Reactive" for material "Detonators", location "4" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.
  22. Hazardous Material Inventory - Data Element "Federal Hazard Category = Fire" for material "Highway Fuses", location "6" is obsolete. Obsolete Data Elements should be updated and/or replaced with valid Data Elements before submitting your inventory.

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**No**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**No**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month greater than 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**No**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**

Aboveground Petroleum Storage

Does your facility own or operate aboveground petroleum storage tanks or containers AND: * have a total aboveground petroleum storage capacity of 1,320 gallons or more, OR * have one or more petroleum tanks in an underground area?	**No**

Regulated Substances

Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

No additional comments provided.

ENVIRONMENTAL COMPLIANCE PLAN
Emergency Response (Contingency Plan) I
Emergency Procedures

Facility ID:	1056
Updated:	9/20/2013

Business Name
CMV - Police/Fire Administration

Facility Street Address
1000 Villa Street

Emergency response to hazardous materials spills or releases is the responsibility of the ***business owner.*** The role of the Fire Department is to provide ***assistance*** to your primary response actions. This site-specific Emergency Response (Contingency) Plan describes your facility's plan for dealing with reportable discharges and shall be implemented immediately whenever they occur. Employees must understand their roles and responsibilities during such an emergency through on-going training and drills. For larger facilities, a more detailed plan may be substituted, but it must include all the items listed here. ***This plan shall be maintained on site for use in the event of an emergency and for inspection by the Fire Department.***

1. Evacuation Plan:

a. The following alarm signal(s) will be used to begin evacuation of this facility:
☐ Bells ☐ Horns/Sirens ☐ Verbal (i.e. Shouting) ☐ Other (specify) P.A. System

b. ☒ Evacuation map is displayed throughout the facility inc. entrances to hazmat locations.

2. a. Emergency Contacts:

Fire/Police/Ambulance	Phone No. **911**
California Emergency Management Agency	Phone No. **(800) 852-7550**

b. Post-Incident Contacts:

Fire Department Fire and Environmental Protection Division	Phone No. **(650) 903-6378**
California Department of Toxic Substance Control (DTSC)	Phone No. **(800) 728-6942**
Santa Clara County Department of Environmental Health	Phone No. **(408) 918-3400**
Cal-OSHA Division of Occupational Safety and Health	Phone No. **(650) 573-3812**
Bay Area Air Quality Management District	Phone No. **(415) 771-6000**
Regional Water Quality Control Board	Phone No. **(510) 622-2300**

c. Emergency Resources:

Poison Control Center	Phone No. **(800) 222-1222**
Nearest Hospital: El Camino Hospital	Phone No. 650-940-7000
Address: 2500 Grant Road	City: Mountain View
Hazwaste Cleanup Contractor:	Phone No.
Contact Name:	EPA ID#:

3. Arrangements With Emergency Responders:
If you have made arrangements with any police department, fire department, hospital, cleanup contractor, or State or local emergency response team to provide specific emergency services, describe them below:

4. Emergency Procedures:

Emergency Coordinator (EC) Responsibilities:

a. Whenever there is a reportable hazardous materials spill or release emergency, the EC (or his/her designee) whose name is and job title is shall:
   i. Identify the character, source, amount, and aerial extent of any released hazardous materials.
   ii. Assess possible hazards to human health or the environment that may result from the emergency. This assessment must consider both direct and indirect effects.
   iii. Activate internal facility alarms or communication systems, where applicable, to notify all facility personnel.

Emergency Response (Contingency Plan) I
Emergency Procedures (Con't)

Facility ID:	1056
Updated:	9/20/2013

Business Name
CMV - Police/Fire Administration

Facility Street Address
1000 Villa Street

Emergency Coordinator (EC) Responsibilities (Continued):

iv. Notify appropriate local authorities *(i.e. call 911)*.
v. Notify the California Emergency Management Agency at (800) 852-7550.
vi. Monitor for leaks, pressure build up, gas generation, or ruptures in valves, pipes, or other equipment shut down in response to the emergency.
vii. Take all reasonable measures necessary to ensure that the emergency does not occur, reoccur, or spread to other hazardous materials at the facility.

b. Before facility operations are resumed in areas of the facility affected by the emergency, the EC shall:
i. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from the emergency at the facility.
ii. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the emergency until cleanup procedures are completed.
iii. Ensure that all emergency equipment is cleaned, fit for use, available for use, or properly disposed of.
iv. Notify the applicable "Post-Incident Contacts" listed in item 2.b on the previous page.

Responsibilities of Personnel **Other** Than the EC:

Function:	*Name and Job Title:*
Shutdown of Operations/Systems:	
Evacuation of Building Personnel:	
Oversight of Outside Assembly Areas:	
Medical Treatment For Injuries (First Aid, CPR, etc.):	

5. Post-Incident Reporting/Recording:

The time, date, and details of any hazardous materials emergency that requires implementation of this plan shall be noted in the facility's operating record.

Within 15 days of any emergency situation which triggers implementation of this plan, a written Emergency Incident Report must be submitted to the California Department of Toxic Substances Control and the Fire and Environmental Protection Division of the Mountain View Fire Department. The report shall include:

a. Name, address, and telephone number of the facility's owner/operator;
b. Name, address, and telephone number of the facility;
c. Date, time, and complete description of the emergency;
d. Name and quantity of the hazardous material(s) involved;
e. The extent of personal injuries, if any;
f. An assessment of actual or potential hazards to human health or the environment, where applicable;
g. The estimated quantity and disposition of recovered material that resulted from the emergency;
h. The cause(s) of the emergency;
i. The actions taken in response to the emergency; and
j. Administrative or engineering controls installed to prevent such emergencies in the future.

6. Earthquake Vulnerability: [19 CCR 2731(e)]

a. **Identification** of areas of the facility and mechanical or other systems that require immediate inspection or isolation because of their vulnerability to seismic activity.
b. **Inspection** of all vulnerable hazardous waste/materials areas, including any or all compressed gases and storage tank/containers. All braces, chains and supporting anchors that secure hazardous waste/materials will be inspected for integrity breach.
c. **Isolation** of compressed gases that are incompatible will be segregated to prevent hazard of commingling other chemicals of a hazard category or incompatibility will be segregated as necessary.

7. Hazard Mitigation/Prevention/Abatement [19 CCR 2731(c)]

Describe your procedures that provide for mitigation, prevention or abatement of hazards to persons, property or the environment below:

CITY OF MOUNTAIN VIEW

Facility Street Address

1000 Villa Street

Indicate below the training provided for all new and existing (annual refresher) employees (check all that apply):
[Note: Items marked with an asterisk(*) are required]

1. Personnel are trained in the following procedures:

- ☒ Internal alarm and notification *
- ☒ Evacuation/re-entry procedures & assembly point locations *
- ☒ Emergency incident reporting
- ☒ External emergency response organization notification
- ☒ Location(s) and contents of this Emergency Response/Contingency Plan *
- ☒ Facility evacuation drills, which are conducted at least (specify)

2. Chemical Handlers are additionally trained in the following:

- ☒ Safe methods for handling and storage of hazardous materials *
- ☒ Location(s) and proper use of fire and spill control equipment *
- ☐ Spill procedures/emergency procedures
- ☒ Proper use of personal protective equipment *
- ☒ Specific hazard(s) of each chemical to which they may be exposed, inc. routes of exposure *
- ☐ Hazwaste Handlers/Managers are trained in all aspects of hazardous waste management specific to their job duties (e.g. container accumulation time requirements, labeling requirements, storage area inspection requirements, manifesting requirements, etc.

3. Emergency Response Team Members are capable of and engaged in the following:

- ☐ Personnel rescue procedures
- ☐ Shutdown of operations
- ☐ Liaison with responding agencies
- ☐ Use, maintenance and replacement of emergency response equipment
- ☐ Refresher training, which is provided at least annually
- ☐ Emergency response drills, which are conducted at least (specify)

4. The following **records** are maintained by this facility:

- ☒ Current employees' training records (retained until closure of the facility) *
- ☒ Former employees' training records (retained at least 3 years after employee termination) *
- ☒ Training program(s) (i.e. written description of introductory and continuing training) *
- ☒ Current copy of this Emergency Response/Contingency Plan *
- ☒ Written record of recordable/reportable hazardous material/waste releases *
- ☒ Written record of hazardous material/waste storage area inspections *
- ☒ Written record of hazardous waste tank daily inspections *
- ☐ Description and documentation of facility emergency response drills

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**No**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**No**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month greater than 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**No**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**

Aboveground Petroleum Storage

Does your facility own or operate aboveground petroleum storage tanks or containers AND: * have a total aboveground petroleum storage capacity of 1,320 gallons or more, OR * have one or more petroleum tanks in an underground area?	**No**

Regulated Substances

Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

No additional comments provided.

Emergency Coordinator (EC) Responsibilities (Continued):

iv. Notify appropriate local authorities *(i.e. call 911).*
v. Notify the California Emergency Management Agency at (800) 852-7550.
vi. Monitor for leaks, pressure build up, gas generation, or ruptures in valves, pipes, or other equipment shut down in response to the emergency.
vii. Take all reasonable measures necessary to ensure that the emergency does not occur, reoccur, or spread to other hazardous materials at the facility.

b. Before facility operations are resumed in areas of the facility affected by the emergency, the EC shall:
i. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from the emergency at the facility.
ii. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the emergency until cleanup procedures are completed.
iii. Ensure that all emergency equipment is cleaned, fit for use, available for use, or properly disposed of.
iv. Notify the applicable "Post-Incident Contacts" listed in item 2.b on the previous page.

Responsibilities of Personnel **Other** Than the EC:

Function:	*Name and Job Title:*
Shutdown of Operations/Systems:	Duty Person / Water Treatment
Evacuation of Building Personnel:	On site personnel
Oversight of Outside Assembly Areas:	On site personnel
Medical Treatment For Injuries (First Aid, CPR, etc.):	911 paramedics and on site personnel

5. Post-Incident Reporting/Recording:

The time, date, and details of any hazardous materials emergency that requires implementation of this plan shall be noted in the facility's operating record.

Within 15 days of any emergency situation which triggers implementation of this plan, a written Emergency Incident Report must be submitted to the California Department of Toxic Substances Control and the Fire and Environmental Protection Division of the Mountain View Fire Department. The report shall include:

a. Name, address, and telephone number of the facility's owner/operator;
b. Name, address, and telephone number of the facility;
c. Date, time, and complete description of the emergency;
d. Name and quantity of the hazardous material(s) involved;
e. The extent of personal injuries, if any;
f. An assessment of actual or potential hazards to human health or the environment, where applicable;
g. The estimated quantity and disposition of recovered material that resulted from the emergency;
h. The cause(s) of the emergency;
i. The actions taken in response to the emergency; and
j. Administrative or engineering controls installed to prevent such emergencies in the future.

6. Earthquake Vulnerability: [19 CCR 2731(e)]

a. **Identification** of areas of the facility and mechanical or other systems that require immediate inspection or isolation because of their vulnerability to seismic activity.
b. **Inspection** of all vulnerable hazardous waste/materials areas, including any or all compressed gases and storage tank/containers. All braces, chains and supporting anchors that secure hazardous waste/materials will be inspected for integrity breach.
c. **Isolation** of compressed gases that are incompatible will be segregated to prevent hazard of commingling other chemicals of a hazard category or incompatibility will be segregated as necessary.

7. Hazard Mitigation/Prevention/Abatement [19 CCR 2731(c)]

Describe your procedures that provide for mitigation, prevention or abatement of hazards to persons, property or the environment below:

List the emergency equipment you have on site (check all that apply):

	EQUIPMENT TYPE	LOCATION*	DESCRIPTION**
PERSONAL PROTECTION EQUIPMENT, SAFETY EQUIPMENT AND FIRST AID EQUIPMENT	☐ Cartridge Respirators		
	☐ Chemical Monitoring Equipment		
	☐ Chemical Protective Aprons/Coats		
	☐ Chemical Protective Boots		
	☒ Chemical Protective Gloves		Box: Tyvek Chem. Resistant
	☒ Chemical Protective Suits		
	☒ Face Shields		2 ea.
	☒ First Aid Kits/Stations		Meets Title 8, Section 1512
	☐ Hard Hats		
	☒ Plumbed Eye Wash Stations		
	☐ Portable Eye Wash Kits (bottle)		
	☐ Respirator Cartridges		
	☐ Safety Glasses/Splash Goggles		
	☒ Safety Showers		
	☐ Self-Contained Breathing Apparatus		
FIRE EXTING. SYSTEMS	☐ Automatic Fire Sprinkler Systems		
	☐ Fire Alarm Boxes/Stations		
	☒ Fire Extinguishers		1 ea. 2AB 10BC
SPILL CONTROL AND DECON. EQUIPMENT	☒ Absorbents		On fuel truck
	☐ Berms/Dikes		
	☐ Decontamination Equipment		
	☐ Emergency Tanks		
	☐ Exhaust Hoods		
	☐ Gas Cylinder Leak Repair Kits		
	☐ Neutralizers		
	☐ Overpack Drums		
	☐ Sumps		
COMMUN. AND ALARM SYSTEMS	☒ Chemical Leak Alarms		
	☐ Intercoms/PA Systems		
	☒ Portable Radios		
	☐ Telephones		
	☐ Underground Tank Leak Detectors		
ADDITIONAL EQUIPMENT			

*If appropriate, use the location codes from your Facility Map(s).
**Describe this equipment and its capabilities. Specify the frequency and procedures for equipment testing and maintenance.

ENVIRONMENTAL COMPLIANCE PLAN
Emergency Response (Contingency Plan) III: Emergency Training/Recordkeeping

Business Name
CMV - Well #22

Facility ID:	**1630**
Updated:	**5/23/2013**

Facility Street Address
1000 Villa Street

Indicate below the training provided for all new and existing (annual refresher) employees (check all that apply):
[Note: Items marked with an asterisk(*) are required]

1. Personnel are trained in the following procedures:

- ☒ Internal alarm and notification *
- ☒ Evacuation/re-entry procedures & assembly point locations *
- ☒ Emergency incident reporting
- ☒ External emergency response organization notification
- ☒ Location(s) and contents of this Emergency Response/Contingency Plan *
- ☐ Facility evacuation drills, which are conducted at least (specify)

2. Chemical Handlers are additionally trained in the following:

- ☒ Safe methods for handling and storage of hazardous materials *
- ☒ Location(s) and proper use of fire and spill control equipment *
- ☒ Spill procedures/emergency procedures
- ☒ Proper use of personal protective equipment *
- ☒ Specific hazard(s) of each chemical to which they may be exposed, inc. routes of exposure *
- ☒ Hazwaste Handlers/Managers are trained in all aspects of hazardous waste management specific to their job duties (e.g. container accumulation time requirements, labeling requirements, storage area inspection requirements, manifesting requirements, etc.

3. Emergency Response Team Members are capable of and engaged in the following:

- ☒ Personnel rescue procedures
- ☒ Shutdown of operations
- ☒ Liaison with responding agencies
- ☒ Use, maintenance and replacement of emergency response equipment
- ☒ Refresher training, which is provided at least annually
- ☐ Emergency response drills, which are conducted at least (specify)

4. The following **records** are maintained by this facility:

- ☒ Current employees' training records (retained until closure of the facility) *
- ☒ Former employees' training records (retained at least 3 years after employee termination) *
- ☒ Training program(s) (i.e. written description of introductory and continuing training) *
- ☒ Current copy of this Emergency Response/Contingency Plan *
- ☒ Written record of recordable/reportable hazardous material/waste releases *
- ☒ Written record of hazardous material/waste storage area inspections *
- ☒ Written record of hazardous waste tank daily inspections *
- ☐ Description and documentation of facility emergency response drills

Environmental Site Assessment Questionnaire for Owner

The following information is requested to evaluate the potential for environmentally-related impacts and property contamination. This questionnaire is to be completed by the owner of the property, or its authorized representative.

PART I

1.	Project description: The Client requested the preparation of a Phase I Environmental Site Assessment (ESA) as part of the environmental scope of work for the proposed project.
2.	Property address(es) and Assessor Parcel Number(s) (APN): The project site is 1000 Villa Street in the City of Mountain View. The APN for the property is 158-150-27.
3.	Current property owner (name, address, telephone number): City of Mountain View
4.	Current property development/improvements: The project site is currently developed with a two-story building which is home to the City of Mountain View Fire Department and City of Mountain View Police Department administration offices.
5.	Date(s) of current property development/improvements: Based on a review of aerial photographs and topographic maps, the current two-story building has been located on the site since at least 1982.
6.	Past property use, development/improvements: Based on aerial photographs, topographic maps and Sanborn maps, The site was developed with residential dwellings from about 1897 to about 1974, and the Mountain View Water Works was located on the site from at least 1907 to about 1956. A building which started as a grain warehouse in 1897 on the northeastern portion of the site was expanded into the Mountain View Fruit Exchange in 1904 until around 1921. The Cal Supply Tomato and Pickle Products warehouses were located on the northeast portion of the site from at least 1921 until about 1956.
7.	Neighboring property uses: The property is in a mixed residential and commercial area. There are railroad tracks to the northeast, multi-family residential and commercial buildings to the southeast, single-family dwellings to the southwest, and Shoreline Boulevard to the northwest.

PART II

1.	Are you aware of any environmental cleanup liens against the property that are filed under federal, tribal, local or state law?	**Yes**	**No**
2.	Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law?	**Yes**	**No**
3.	Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the *property* or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	**Yes**	**No**
4.	Are you aware of any commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, (a) do you know of specific chemicals that are present at the *property?* (b) do you know of spills or other chemical releases that have taken place at the *property?* (c) do you know of any environmental cleanups that have taken place at the *property?*	**Yes**	**No**
5.	Based on your knowledge and experience related to the *property*, are there any obvious indicators that point to the presence or likely presence of contamination at the *property?*	**Yes**	**No**
6.	If a property transaction is occurring in conjunction with this environmental assessment, does the purchase price of this *property* reasonably reflect the fair market value of the *property?* If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property?*	**Yes**	**No**
7.	Are you aware of any past or present above ground or underground storage tanks on the *property*? To your knowledge, has there ever been any hazardous substances or wastes stored on the *property?*	**Yes**	**No**

If a "Yes" response was provided to Questions 1 – 5 or a "No" response was provided to Question 6, please provide details below:

I certify that the information provided herein is true and correct to the best of my knowledge as of the date signed below.

Name (Printed/Typed): Naveen Govind

Signature: Naveen Govind Date: 5/20/24

CATHLEEN M. FITZGERALD, DEnv, PE

Principal Engineer

Cathy has over 30 years of academic and professional experience in the areas of hydrology studies, health risk assessments, safety hazard assessments, air quality studies, hazardous waste investigations, remedial action plans, and installation of groundwater and soil vapor extraction systems. She has worked with various public- and private sector clients in the United States, Japan, Taiwan, and Korea on licensing and environmental assessments for nuclear and fossil fuel power plants, hazards associated with solar thermal power projects, and the development of alternative energy sources. In addition, she has worked on numerous water projects in Africa, South America, and Central America.

Cathy conducts Phase I ESAs, Preliminary Endangerment Assessemnt reports, baseline health risk assessments, develops site-specific soil cleanup levels, uses vadose zone modeling to evaluate the potential threat to groundwater from soil contaminants, conducts groundwater modeling to evaluate natural attenuation of chemical plumes, and develops innovative groundwater remediation systems. In addition, she has prepared air quality and hydrology sections for numerous CEQA documents. Cathy is a Registered Professional Engineer in the state of California.

APPENDIX E:
Noise Data

This page is intentionally left blank.

ARTICLE VI. - CONSTRUCTION NOISE

SEC. 8.70. - Construction noise.

a. **Hours of construction.** No construction activity shall commence prior to 7:00 a.m. nor continue later than 6:00 p.m., Monday through Friday. No work is permitted on Saturday unless prior written approval is granted by the chief building official. The term "construction activity" shall include any physical activity on the construction site or in the staging area, including the delivery of materials. In approving modified hours, the chief building official may specifically designate and/or limit the activities permitted during the modified hours. No construction activity is allowed on Sunday or recognized holidays.

b. **Modification.** At any time before commencement of or during construction activity, the chief building official may modify the permitted hours of construction upon twenty-four (24) hours written notice to the contractor, applicant, developer or owner. The chief building official can reduce the hours of construction activity below the 7:00 a.m. to 6:00 p.m. time frame or increase the allowable hours.

c. **Sign required.** If the hours of construction activity are modified, then the general contractor, applicant, developer or owner shall erect a sign at a prominent location on the construction site to advise subcontractors and material suppliers of the working hours. The contractor, owner or applicant shall immediately produce upon request any written order or permit from the chief building official pursuant to this section upon the request of any member of the public, the police or city staff.

d. **Violation.** Violation of the allowed hours of construction activity, the chief building official order, required signage or this Section shall be a violation of this code.

(Ord. No. 15.22, § 1, 12/13/22.)

SEC. 8.70.1. - Reserved.

SECS. 8.71—8.112. - Reserved.

SEC. 21.26. - Stationary equipment noise.

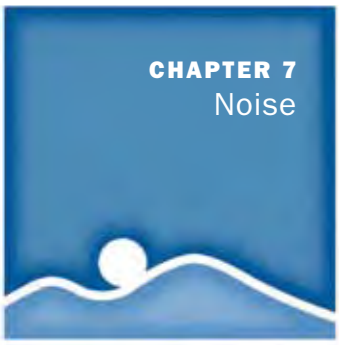
a. No person shall own or operate on any property any stationary equipment, such as, but not limited to, air compressors, equipment for swimming pools, spas, or air conditioners, which produces a sound level exceeding 55 dB(A) (50 dB(A) during the night, 10 p.m. to 7 a.m.) when measured at any location on any receiving residentially used property, said measurement to utilize a sound level meter equal to or better than an ANSI Standard S 1.4-1971 Type 2 noise level meter.

b. Any plans submitted for building, plumbing, electrical or mechanical/heating permit for any stationary equipment shall be accompanied by documentation of the equipment noise level when available and by noise mitigating devices or buffers appropriate to achieve the above noise limit. Initial granting of a permit for such equipment shall not affect the obligation of each person owning or operating such equipment for continued compliance with these noise level requirements.

c. Operation of any equipment, as specified in this section, above the 55 dB(A) limit (50 dB(A) nighttime), may occur only if the owner or operator has obtained a conditional use permit. A permit to operate equipment which exceeds the limit may be granted by the zoning administrator only if it has been demonstrated that such operation will not be detrimental to the health, safety, peace, morals, comfort or general welfare of residents subjected to such noise. The manner of obtaining said permit and the rules governing its issuance and revocation shall be as specified in Mountain View City Code Sec. 36.43 and following, all relating to the issuance of conditional use permits.

(Ord. No. 11.81, 8/31/81.)

CHAPTER 7
Noise



Protecting the community from excessive or harmful noise is an important part of sustaining a high quality of life. The purpose of this Noise Element is to guide policies for addressing exposure to current and projected noise sources in Mountain View. The Element covers State Government Code requirements and the State Office of Noise Control Guidelines.

The Element begins with a Context section, followed by a Land Use Compatibility section which outlines acceptable noise standards for the City's land use categories (page 162). Then, a Looking Forward section highlights opportunities, challenges and key strategies (page 165). The final section sets forth the specific goal and policies (page 166) for each topic area.

Context

To help guide decisions on land use, this Element outlines policies to decrease noise and reduce its effects. Noise contour maps in this section show areas of the city exposed to freeway, railway and other major noise sources. By highlighting these areas and establishing noise and land use compatibility standards, the City can reduce conflicts between noise and land use and lessen noise sources that reduce the quality of life.

The Context section is organized according to these topics:

- Noise Terms and Definitions (page 158)
- Existing Noise Conditions (page 159)
- City Noise Ordinances (page 162)

Noise Terms and Definitions

This section includes some background technical terms and definitions describing noise and how it is perceived and measured. Additional technical information is in the General Plan Environmental Impact Report (EIR).

Ambient Noise Level – The all-encompassing noise associated with a given environment at a specified time, usually a composite of nearby and far-away sound from many sources coming from many directions.

Decibel (dB) – A decibel is a unit of measurement that indicates the relative amplitude of a sound. The 0 point on the dB scale is the lowest sound level that the healthy, unimpaired human ear can detect. People can hear changes of 3dB or more; changes of less than 3dB can only be perceived in a laboratory. Sound levels in decibels are calculated logarithmically. Each 10 decibel increase sounds like the noise has approximately doubled.

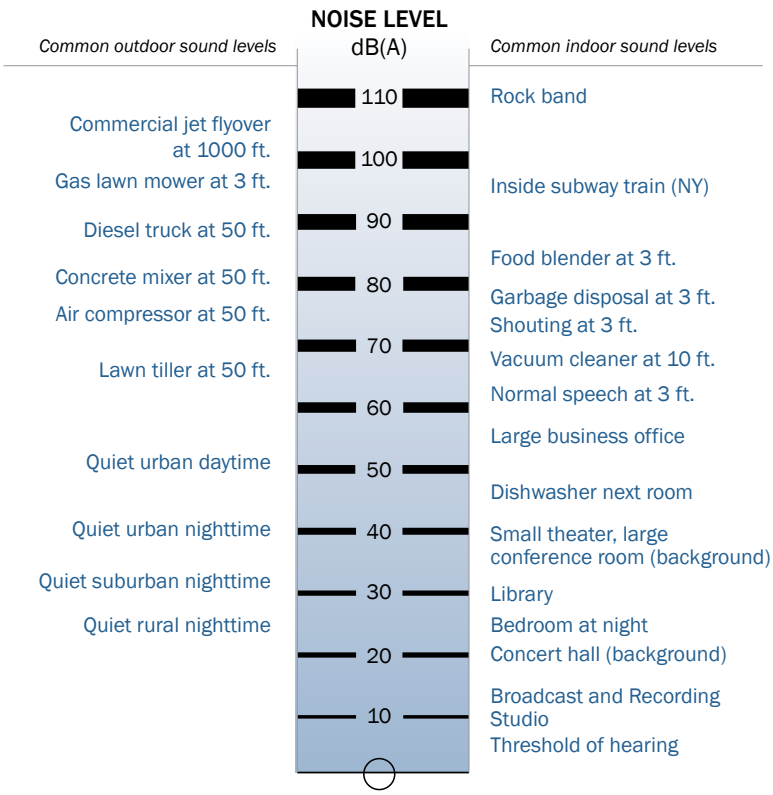
A-Weighted Sound Level (dBA) – The human ear is not equally sensitive to all sound frequencies, so there is a special frequency-dependent decibel rating scale to relate noise to human sensitivity. It is a process called "A-weighting," expressed as "dBA." An A-weighted decibel scale approximates the range of human sensitivity to sounds of different frequencies. All sound levels discussed in this Element are A-weighted, unless reported otherwise (Figure 7.1).

Equivalent Sound Level (Leq) – Leq represents an average of the sound energy over a specified period. It is useful because sound levels can vary substantially in a short time.

Day-Night Level (Ldn) – Ldn is the energy average of A-weighted sound levels occurring over an entire day, with a 10 dB penalty added to A-weighted sound levels occurring during nighttime hours between 10 p.m. and 7 a.m.

Community Noise Equivalent Level (CNEL) – The 24-hour A-weighted average sound level from midnight to midnight, obtained after adding 5 dBA to sound levels occurring during the evening from 7 p.m. to 10 p.m. and after adding 10 dBA to sound levels at night between 10 p.m. and 7 a.m.

Figure 7.1: Typical A-Weighted Sound Levels



Source: Compiled by LSA Associates, Inc., 2009

Existing Noise Conditions

The existing noise environment in Mountain View was documented through short-term and long-term, or 24-hour, noise measurements of noise-sensitive locations throughout the city with nearby stationary noise sources. Complete noise-monitoring locations and results are documented in the General Plan Current Conditions Report, August 2009 (Chapter 12, Section 12.8 Noise).

The noise-monitoring results show that existing noise levels throughout the city ranged from 51.2 to 72.1 dBA Leq. The calculated Ldn at the long-term 24-hour noise monitoring location is 65 dBA Ldn. This range of noise level is typical of an urbanized setting that is not located near busy streets. In addition to roadway traffic, aircraft flights, landscaping maintenance equipment, construction, loading and unloading, commercial activities and everyday neighborhood activities contribute to the ambient noise environment.

Transportation Noise Sources

Primary transportation noise sources include major roadways, railways and airports, all major noise contributors in Mountain View.

Vehicle Noise

Motor vehicles and their distinctive sounds are a dominant noise source in Mountain View. The amount of noise varies according to many factors such as traffic volume, the percentage of cars and trucks, average traffic speed and the distance from a noise source. Major contributing roadway noise sources in Mountain View include Highway 101, Highway 237, Highway 85, Central Expressway, El Camino Real and other arterial and collector roadways throughout the city.

Rail Noise

Mountain View has two Caltrain stations, one at San Antonio and the other Downtown. There are four Valley Transportation Authority (VTA) light rail stations. They are Middlefield, Whisman, Evelyn and Downtown Mountain View. The NASA/Bayshore station is next to city limits. The Caltrain and VTA light rail operate daily service on separate tracks, sharing the rail corridor along Central Expressway between Whisman Road and Downtown.

The Caltrain rail line passes through the city along the south side of Central Expressway and is the dominant noise source along this corridor. The nearest land uses to this corridor include residential and commercial uses south of the rail line. On weekdays, the Caltrain line includes many commuter trains traveling north and south.

Trains and their track noise, engines and horns are intermittent. Buildings are close to the tracks with no sound walls. All of this influences the overall effect of train noise. Light rail service is not as noisy because its trains are electric and travel more slowly.

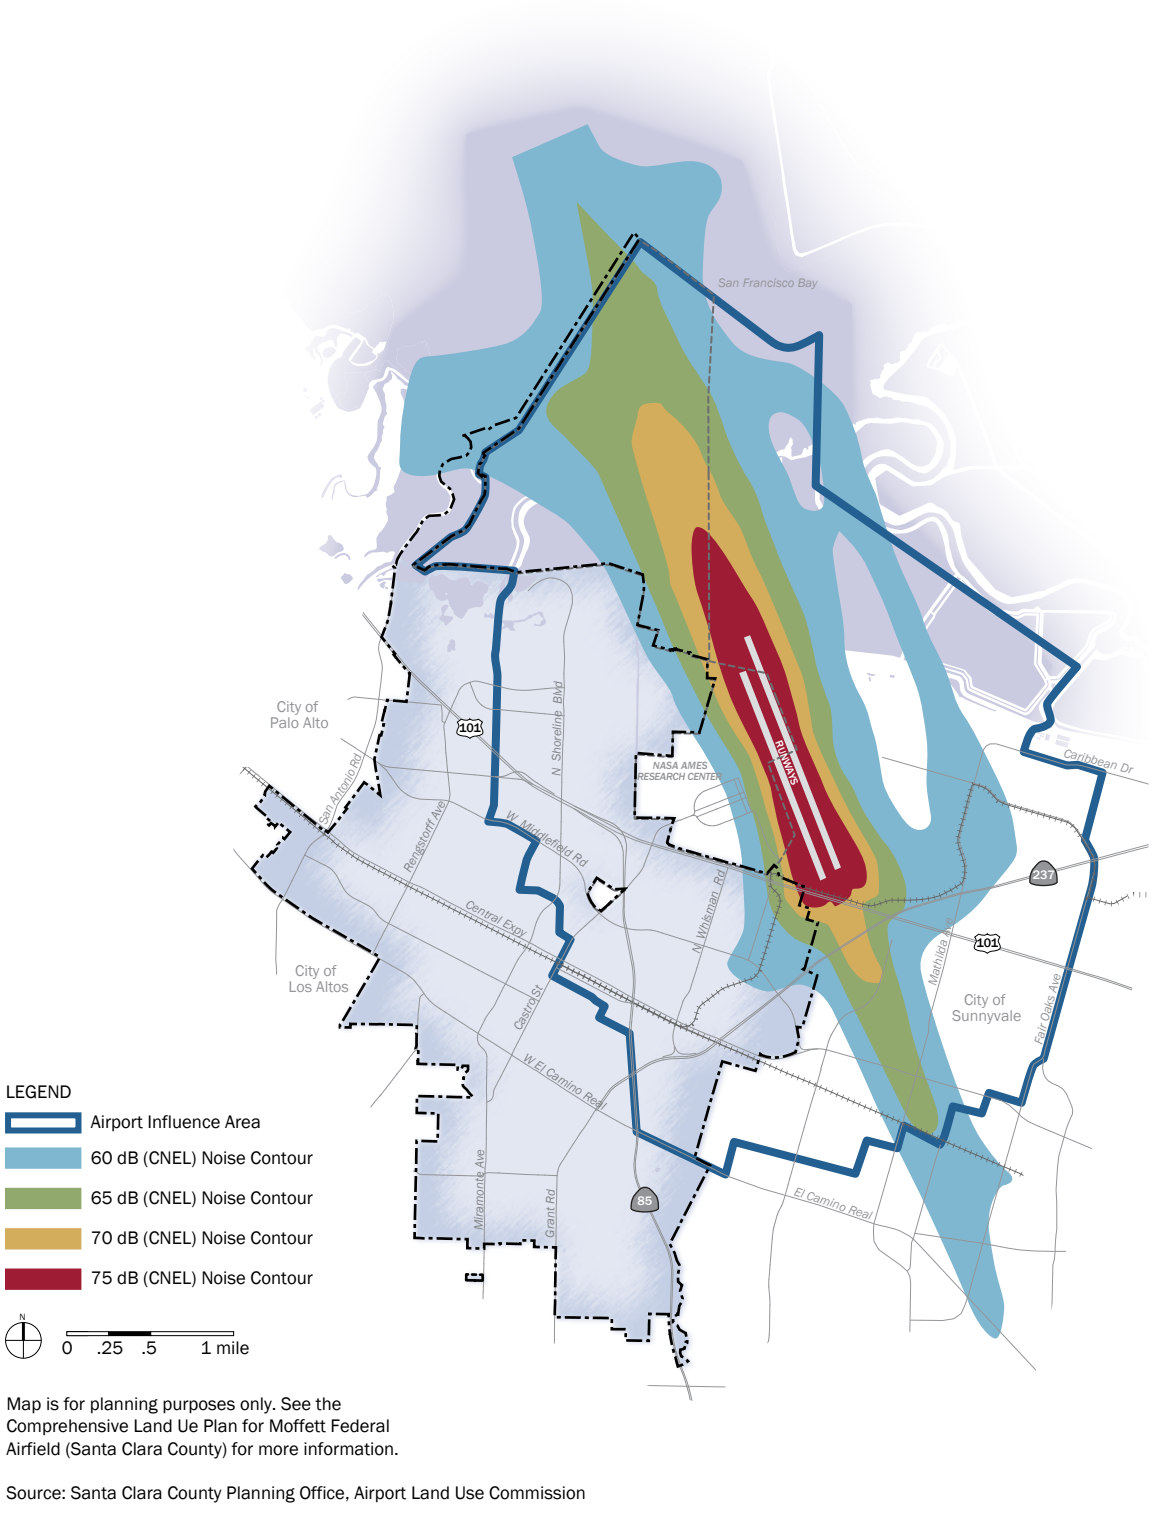
Mountain View used guidelines in the FTA publication “Transit Noise and Vibration Impact Assessment” to calculate noise levels from trains along the Caltrain rail line. The calculation assumes that trains have one diesel locomotive and about four cars traveling at up to 70 miles per hour. Without warning horns, the noise level at 50 feet from the center of the rail line is approximately 85 dBA Ldn. This level goes up to about 86 dBA when trains sound their warning horns before passing street-level railroad crossings.

High-Speed Rail

As of 2011, preliminary plans show high-speed trains operating through Mountain View on or near the Caltrain right-of-way. New trains could eliminate some current sources of noise because two street-level crossings would need to be removed to accommodate high-speed trains. This would reduce the noise from current train horns.

The high-speed trains also would likely use electric cars, which would eliminate the low-frequency sounds from diesel locomotives. However, aerodynamic effects may make high-speed trains noisier than conventional trains. Ground vibration caused by high-speed trains is expected to be similar to vibration from conventional trains with steel wheels on steel rails.

Figure 7.2: Aircraft Noise Contours, 2022, and Airport Influence Area



Map is for planning purposes only. See the Comprehensive Land Ue Plan for Moffett Federal Airfield (Santa Clara County) for more information.

Source: Santa Clara County Planning Office, Airport Land Use Commission

Airport Noise

Aircraft flights over Mountain View contribute to local ambient noise levels and affect which land uses are appropriate in different areas. Airports near Mountain View include Moffett Federal Airfield, Palo Alto Airport, San Jose International Airport and San Francisco International Airport.

Moffett Federal Airfield is immediately northeast of Mountain View. Parts of the city are within its 60 dBA CNEL noise contour, including open space, business parks and industrial land, all of which are compatible uses for airport noise levels. Santa Clara County's Comprehensive Land Use Plan (CLUP) has detailed background information, policy guidance, and a noise contour map for Moffett Federal Airfield (Figure 7.2). The CLUP also includes noise restrictions and land use compatibility standards for surrounding cities, including Mountain View.

Mountain View does not have much airport noise. The city is outside the 55 dBA CNEL noise contour of the Palo Alto Airport, the San Jose International Airport and the San Francisco International Airport. These last two occasionally produce aircraft noise, but not a significant amount.

Stationary Noise Sources

Construction, cooling and heating systems, parking lots and special events are among the stationary noise sources in Mountain View.

Construction Noise

Construction noise includes demolition, excavation, delivery of materials, grading and building construction on a project site or staging area. Construction noise is typically louder than background noise, but short-term noise stops when construction is finished. All construction activity is required to comply with the City's noise ordinance standards.

Section 8.23 of the City Code restricts the hours of operation for noise-producing construction equipment. The operation of pile drivers, steam shovels and pneumatic hammers used in construction, demolition or other repair work is restricted to the hours of 7 a.m. to 6 p.m. Monday through Friday. No noise-producing construction activity is permitted on Saturday, Sunday or holidays without written approval from the City. If the hours of construction activity change, then the general contractor, applicant, developer or owner is required to erect a sign at a prominent location on the construction site to let subcontractors and material suppliers know of the working hours.

Other Stationary Noise

Mechanical systems for heating, ventilation and air conditioning; delivery trucks idling and loading and unloading; and recreation activities and parking lot operations produce stationary noise. Service and delivery truck activities are the loudest. Loading and unloading delivery trucks can produce maximum noise levels from 75 dBA to 85 dBA Ldn at 50 feet. Typical parking lot activities generate approximately 60 dBA to 70 dBA Ldn at 50 feet.

Stationary noise sources also include business or industrial operations such as storage facilities and lumber yards. General business activity and noise from special events or festivals are also stationary sources. Seasonal concerts at Shoreline Amphitheatre produce noise in the surrounding area, including neighboring Palo Alto. As a result, the Amphitheatre has an agreement

with the City of Palo Alto to identify measures to reduce noise levels when necessary.

City Noise Ordinances

The City's codes address noise issues and protect the community from exposure to excessive noise from sources such as construction activity, animals, amplified sound and stationary equipment. These codes specify how noise is measured and regulated. The City's Zoning Ordinance also includes noise regulations and standards for uses such as drive-in and drive-through sales, commercial and industrial land uses and sensitive uses such as child-care centers. Noise is also regulated through project conditions of approval. The Mountain View Police Department and the City Attorney's office enforce noise violations.

Land Use Compatibility

The State of California identifies homes, hotels, schools and hospitals as particularly sensitive to noise. Housing is highly sensitive because noise can interfere with residents' rest and relaxation. Acceptable noise levels can also vary among different residential land uses. In general, single-family neighborhoods are considered to be the most sensitive to noise. Cities may identify other uses as noise sensitive, such as parks, libraries and child-care centers. Other land uses such as commercial, industrial and office uses are generally not as sensitive to noise as housing. These uses can generate significant noise themselves, and some have lower human occupancy. Examples of these land uses include manufacturing, utilities, parking lots and transit stations.

The City has established outdoor noise environment guidelines for different land use categories (Table 7.1). These guidelines are based on sound levels that do not interfere with people's activities or threaten their well-being. The four categories are: normally acceptable, conditionally acceptable, normally unacceptable and clearly unacceptable.

The City has projected the future noise impacts from roadway, rail, airport and other sources in the community to 2030 (Figure 7.3). These projections can be used to support design considerations in new land use projects and to inform decisions on land use changes. For example, projections identify locations where new residential might be "normally unacceptable" under future conditions.

Using the Outdoor Noise Environment Guidelines *(Table 7.1, next page)*

- This chart provides general guidance for siting new land uses, given future noise environments.
- If a site's noise environment is in the "normally acceptable" range, conventional construction should be adequate to achieve interior noise levels compatible with activities characteristic of the land use. Figure 7.3 provides guidance for the approximate location of "normally acceptable" noise environments in 2030.
- The Noise Policies contain specific standards for noise levels in residential developments. These policies ensure that noise levels for housing are limited, both indoors and in outdoor active-use areas.

Table 7.1 Outdoor Noise Environment Guidelines

Land Use Category	Community Noise Exposure in Decibels (CNEL) Day/Night Average Noise Level in Decibels (Ldn)						
	55	60	65	70	75	80	85
Residential–Single-Family, Duplex, Mobile Homes							
Residential–Multi-Family Transient Lodging–Motels, Hotels							
Schools, Libraries, Churches, Hospitals, Nursing Homes							
Auditoriums, Concert Halls, Amphitheaters, Sports Arenas, Outdoor Spectator Sports							
Playgrounds, Neighborhood Parks							
Golf Courses, Riding Stables, Water Recreation, Cemeteries							
Office Buildings, Business Commercial and Professional							
Industrial, Manufacturing, Utilities, Agriculture							

NORMALLY ACCEPTABLE
Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

CONDITIONALLY ACCEPTABLE
New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design.

NORMALLY UNACCEPTABLE
New construction or development should be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

CLEARLY UNACCEPTABLE
New construction or development clearly should not be undertaken.

Source: State of California General Plan Guidelines, 2003.

Figure 7.3: Noise Contours, 2030

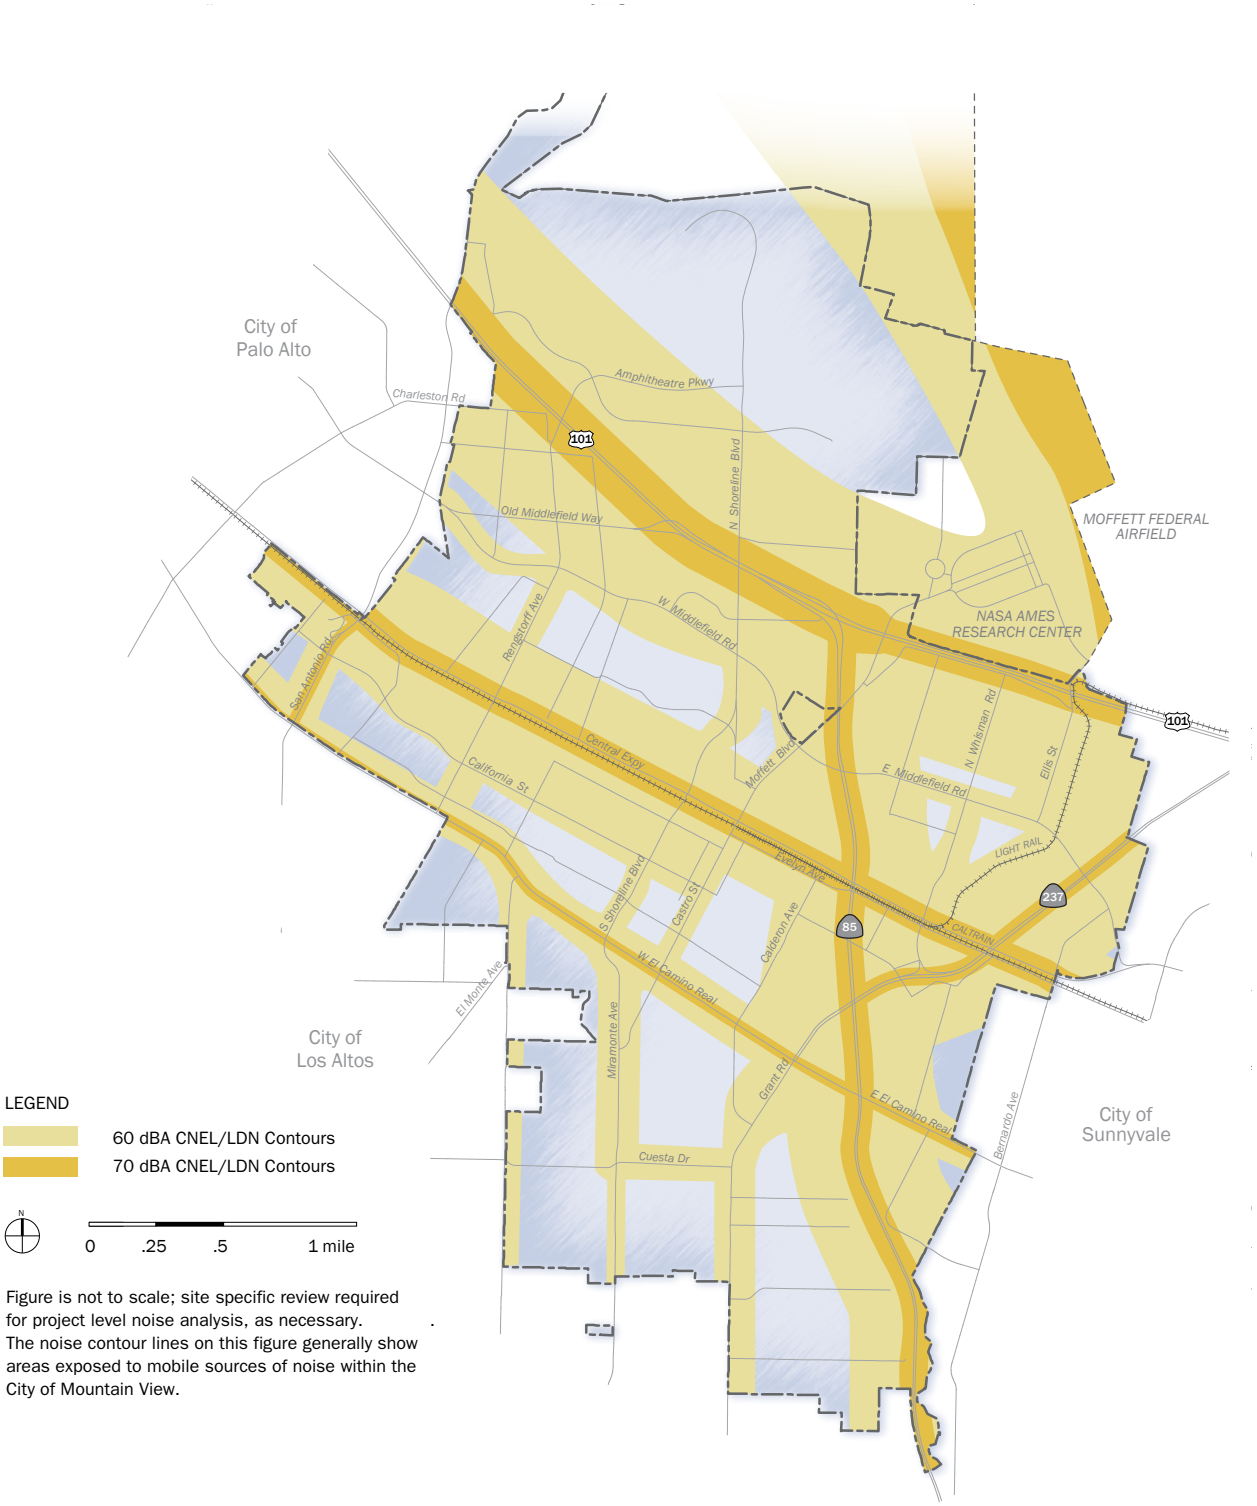


Figure is not to scale; site specific review required for project level noise analysis, as necessary. The noise contour lines on this figure generally show areas exposed to mobile sources of noise within the City of Mountain View.

Looking Forward

Following are some distinct opportunities and challenges the City of Mountain View is likely to face over the life of the General Plan, and key strategies for addressing them. These strategies should be top priorities to advance the Noise Element goal and policies described in the next section, and inform decision making over the life of the General Plan.

City noise regulating codes. The City will update as necessary and continue enforcing City Codes regulating noise to help contribute to Mountain View's high quality of life.

Land use compatibility. During planning and development decisions, the City will continue to rely on the Outdoor Noise Environment Guidelines to ensure land use compatibility (Table 7.1).

Protection of noise-sensitive uses. Noise-sensitive uses such as residential development, schools, child-care facilities and hospitals must continue to be protected from noise and vibration impacts from freeways, arterials, railroads and airport use.

NASA Ames coordination. Coordinating with NASA Ames on development plans for the NASA Ames Research Center and continuing use of the Moffett Federal Airfield are important steps in addressing and mitigating existing and potential noise sources.

California High-Speed Rail. Construction of a proposed high-speed train system in California that would link Los Angeles to the San Francisco Bay Area could create noise and vibration impacts in Mountain View. As more information on this project becomes available, it should be used accordingly when conducting noise and vibration studies and land use planning along this corridor.

Goal and Policies

The Noise (NOI) goal is a broad statement describing the City's future direction. Policies provide more specificity for achieving this goal. Actions for implementing this goal and these policies are detailed separately in the General Plan's Action Plan.

Goal NOI-1: *Noise levels that support a high quality of life in Mountain View.*

Policies

NOI 1.1: Land use compatibility. Use the Outdoor Noise Environment Guidelines as a guide for planning and development decisions (Table 7.1).

NOI 1.2: Noise-sensitive land uses. Require new development of noise-sensitive land uses to incorporate measures into the project design to reduce interior and exterior noise levels to the following acceptable levels:

- New single-family developments shall maintain a standard of 65 dBA Ldn for exterior noise in private outdoor active use areas.
- New multi-family residential developments shall maintain a standard of 65 dBA Ldn for private and community outdoor recreation use areas. Noise standards do not apply to private decks and balconies in multi-family residential developments.
- Interior noise levels shall not exceed 45 dBA Ldn in all new single-family and multi-family residential units.
- Where new single-family and multi-family residential units would be exposed to intermittent noise from major transportation sources such as train or airport operations, new construction shall achieve an interior noise level of 65 dBA through measures such as site design or special construction materials. This standard shall apply to areas exposed to four or more major transportation noise events such as passing trains or aircraft flyovers per day.

NOI 1.3: Exceeding acceptable noise thresholds. If noise levels in the area of a proposed project would exceed normally acceptable thresholds, the City shall require a detailed analysis of proposed noise reduction measures to determine whether the proposed use is compatible. As needed, noise insulation features shall be included in the design of such projects to reduce exterior noise levels to meet acceptable thresholds, or for uses with no active outdoor use areas, to ensure acceptable interior noise levels.

NOI 1.4: Site planning. Use site planning and project design strategies to achieve the noise level standards in NOI 1.1 (Land use compatibility) and in NOI 1.2 (Noise-sensitive land uses). The use of noise barriers shall be considered after all practical design-related noise measures have been integrated into the project design.

NOI 1.5: Major roadways. Reduce the noise impacts from major arterials and freeways.

NOI 1.6: Sensitive uses. Minimize noise impacts on noise-sensitive land uses, such as residential uses, schools, hospitals and child-care facilities.

NOI 1.7: Stationary sources. Restrict noise levels from stationary sources through enforcement of the Noise Ordinance.

NOI 1.8: Moffett Federal Airfield. Support efforts to minimize noise impacts from Moffett Federal Airfield in coordination with Santa Clara County's Comprehensive Land Use Plan.

NOI 1.9: Rail. Reduce the effects of noise and vibration impacts from rail corridors.

FINAL ENVIRONMENTAL IMPACT REPORT

INTRODUCTION

This Final Environmental Impact Report (EIR) has been prepared in accordance with the California Environmental Quality Act (CEQA), as amended (Public Resources Code Sections 21000 et seq.), and the CEQA Guidelines (California Code of Regulations Sections 15000 et seq.).

According to CEQA Guidelines Section 15132, the Final EIR shall consist of:

(a) The draft EIR or a revision of the draft.

(b) Comments and recommendations received on the draft EIR either verbatim or in summary.

(c) A list of persons, organizations, and public agencies comments on the draft EIR.

(d) The responses of the Lead Agency to significant environmental points raised in the review and consultation process.

(e) Any other information added by the lead agency.

This document has been prepared in accordance with CEQA and the CEQA Guidelines and represents the independent judgment of the Lead Agency. This document and the circulated Draft EIR comprise the Final EIR, in accordance with CEQA Guidelines Section 15132.

According to CEQA, lead agencies are required to consult with public agencies having jurisdiction over a proposed project, and to provide the general public with an opportunity to comment on the Draft EIR. A Draft EIR was prepared for the proposed project to provide an assessment of the potential environmental consequences of adoption and implementation of the proposed project. A Notice of Preparation of an EIR was issued by the City of Mountain View (City) on December 1, 2024, for a 30-day-review period. A Notice of Availability (NOA) was issued by the City on July 1, 2025, and the Draft EIR was made available for public review for a 45-day public review period through August 15, 2025.

No comments were submitted to the City during the 45-day public review period, and no revisions to the Draft EIR are required.

This EIR, which is comprised of the Draft and Final EIRs, will be presented at a City Council hearing and staff will advise the City Council on certification of the EIR. The City Council will consider staff recommendations on the EIR and the proposed project during a noticed public hearing and will take final action with regard to certification of the EIR. The City Council will consider certification of the EIR at a public hearing in Fall 2025.

REVISIONS TO THE DRAFT EIR

The following revisions represented by underlined text that represents language that has been added to the EIR and text with ~~strikethrough~~ that has been deleted from the Draft EIR, do not constitute significant new information as defined in the CEQA Guidelines Section 15088.5; therefore, the Draft EIR does not need to be recirculated.

The first sentence of the second paragraph in Mitigation Measure BIO-2 shown on pages 1-12 and 4.2-9 of the Draft EIR is hereby amended as follows:

In addition, a Tree Protection and Replacement Program (Program) shall be developed by a Certified Arborist prior to ~~project approval~~ issuance of building permits and implemented during project construction to provide for adequate protection and replacement of "heritage" trees, as defined by the City's Municipal Code. The Program shall include, but is not limited to, the following provisions:

The second sentence of the first paragraph in Mitigation Measure CUL-1.1 shown on pages 1-17 and 4.3-11 of the Draft EIR is hereby amended as follows:

Mitigation Measure CUL-1.1: The City shall have Historic American Building Survey Level II documentation completed for the Mountain View Police Services - Fire Administration building and its setting. To ensure public access, the City shall submit copies of the documentation to Mountain View ~~Historical Association's~~ History Center in the Mountain View Library and the California Historical Resources Information System Northwest Information Center. This documentation shall include drawings, photographs, and a historical narrative:

MITIGATION AND MONITORING REPORT

This Mitigation Monitoring and Reporting Program (MMRP) has been prepared for the proposed Mountain View Public Safety Building project (proposed project). The purpose of the MMRP is to ensure the implementation of mitigation measures identified as part of the environmental review for the proposed project. The MMRP includes the following information:

- The full text of the mitigation measures;
- The party responsible for implementing the mitigation measures;
- The timing for implementation of the mitigation measure;
- The agency responsible for monitoring the implementation; and
- The monitoring action and frequency.

The mitigation measures in this MMRP shown in Table 1, *Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program*, shall be applied to all future development anywhere in the EIR Study Area. The City of Mountain View must adopt this MMRP, or an equally effective program, if it approves the proposed project with the mitigation measures that were adopted or made conditions of project approval.

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
Mitigation Measure AIR-1: The project contractor shall comply with the Bay Area Air District's basic best management practices for reducing construction-related emissions of uncontrolled fugitive dust (coarse inhalable particulate matter [PM_{10}] and fine inhalable particulate matter [$PM_{2.5}$]): ▪ All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day. ▪ All haul trucks transporting soil, sand, or other loose material off-site shall be covered. ▪ All visible mud or dirt trackout onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited. ▪ All vehicle speeds on unpaved roads shall be limited to 15 mph. ▪ All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used. ▪ Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measures Title 13, Section 2485, of the California Code of Regulations). Clear signage shall be provided for construction workers at all access points. ▪ All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation. ▪ All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph. ▪ All trucks and equipment, including their tires, shall be washed off prior to leaving the site. ▪ Unpaved roads providing access to sites located 100 feet or further from a paved road shall be treated with a 6- to 12-inch layer of compacted layer of wood chips, mulch, or gravel. ▪ Publicly visible signs shall be posted with the telephone number and name of the person to contact at the City regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's General Air Pollution Complaints number shall also be visible to ensure compliance with applicable regulations.	Project contractor	Prior to submittal of grading permit	City of Mountain View Community Development Department Building Division

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
These measures shall be noted on grading plans prepared by the applicant submitted to the City of Mountain View Building Division. The construction contractor shall implement these measures during ground disturbing activities. The City shall verify compliance that these measures have been implemented during normal construction site inspections.			
Mitigation Measure AIR-2: The City of Mountain View shall specify in the construction bid that the project construction contractor(s) and subcontractor(s) comply with the following requirements for all off-road equipment used over the entire duration of the construction activities at the site: ▪ Use engines that meet either US EPA or California Air Resources Board (CARB) Tier 4 Final emission standards for engines that are greater than 25 horsepower. Ensure that all construction plans submitted to the City of Mountain View Building Division clearly show the selected emission reduction strategy for construction equipment over 25 horsepower. ▪ If Tier 4 Final equipment is not available for use for the project for a specific piece of off-road construction equipment, documentation shall be provided to the City of Mountain View demonstrating that such equipment is not available for the project. If Tier 4 Final equipment is not available, the construction contractor(s) and subcontractor(s) affected shall use Tier 4 Interim equipment instead. If Tier 4 Interim equipment is not available for use for the project for a specific piece of off-road construction equipment, documentation shall be provided to the City demonstrating that such equipment is not available for the project. If Tier 4 Interim equipment is not available, the construction contractor(s) and subcontractor(s) affected shall use Tier 3 equipment outfitted with a level 3 diesel particulate filter instead. ▪ Prohibit the use of generators except for electric alternatives. The City shall ensure that all construction plans submitted to the City of Mountain View Building Division clearly show the requirement to use power storage equipment or electric generators in lieu of fossil fuel powered generators. ▪ Maintain a list of all operating equipment in use on the project site for verification by the City or their designee. The construction equipment list shall state the makes, models, fuel type, and number of construction equipment on-site. All equipment shall be properly serviced and maintained in accordance with the manufacturer's recommendations.	City of Mountain View Public Works Department	Prior to issuance of construction bid	City of Mountain View Community Development Department Building Division

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
Communicate with all sub-contractors in contracts and construction documents that all non-essential idling of construction equipment is restricted to 5 minutes or less in compliance with California Air Resources Board Rule 2449 and is responsible for ensuring that this requirement is met.			
Mitigation Measure BIO-1: Nests of raptors and other birds shall be protected when in active use, as required by the federal Migratory Bird Treaty Act and the California Fish and Game Code. The construction contractor shall indicate the following on all construction plans, if construction activities and any required tree removal occur during the breeding season (February 1 and August 31). Preconstruction surveys shall: ▪ Be conducted by a qualified biologist prior to tree removal or grading, demolition, or construction activities. Note that preconstruction surveys are not required for tree removal or construction, grading, or demolition activities outside the nesting period. ▪ Be conducted no more than 14 days prior to the start of tree removal or construction. ▪ Be repeated at 14-day intervals until construction has been initiated in the area after which surveys can be stopped. ▪ Document locations of active nests containing viable eggs or young birds. Protective measures for active nests containing viable eggs or young birds shall be implemented under the direction of the qualified biologist until the nests no longer contain eggs or young birds. Protective measures shall include: ▪ Establishment of clearly delineated exclusion zones (i.e., demarcated by identifiable fencing, such as orange construction fencing or equivalent) around each nest location as determined by the qualified biologist, taking into account the species of birds nesting, their tolerance for disturbance and proximity to existing development. In general, exclusion zones shall be a minimum of 300 feet for raptors and 75 feet for passerines and other birds. ▪ Monitoring active nests within an exclusion zone on a weekly basis throughout the nesting season to identify signs of disturbance and confirm nesting status. ▪ An increase in the radius of an exclusion zone by the qualified biologist if project activities are determined to be adversely affecting the nesting birds. Exclusion zones may be reduced	Project contractor and qualified biologist	Prior to submittal of construction permit applications	City of Mountain View Community Development Department Building Division

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
by the qualified biologist only in consultation with California Department of Fish and Wildlife. The protection measures shall remain in effect until the young have left the nest and are foraging independently or the nest is no longer active.			
Mitigation Measure BIO-2: The proposed project shall comply with the City of Mountain View's Municipal Code requirements for the provision of the removal of heritage trees in Chapter 32, Trees, Shrubs and Plants, Article II, Protection of The Urban Forest. A tree removal permit shall be obtained for the removal of any "heritage" tree, and replacement plantings shall be provided as approved by the City. If permitted, any replacement trees be placed off-site or an appropriate in-lieu tree replacement fee may be paid to the City of Mountain View as compensation for "heritage" trees removed by the proposed project, where sufficient land area is not available on-site for adequate replacement and when approved by the City. In addition, a Tree Protection and Replacement Program (Program) shall be developed by a Certified Arborist prior to issuance of building permits and implemented during project construction to provide for adequate protection and replacement of "heritage" trees, as defined by the City's Municipal Code. The Program shall include, but is not limited to, the following provisions: ▪ Adequate measures shall be defined to protect all trees to be preserved. These measures should include the establishment of a tree protection zone (TPZ) around each tree to be preserved, in which no disturbance is permitted. For design purposes, the TPZ shall be located at the dripline of the tree or 10 feet, whichever is greater. If necessary, the TPZ for construction-tolerant species (i.e., coast live oaks) may be reduced to 7 feet. ▪ Temporary construction fencing shall be installed at the perimeter of TPZs prior to demolition, grubbing, or grading. Fences shall be 6-foot chain link or equivalent, as approved by the City of Mountain View. Fences shall remain until all construction is completed. Fences shall not be relocated or removed without permission from the consulting arborist. ▪ No grading, excavation, or storage of materials shall be permitted within TPZs. Construction trailers, traffic, and storage areas shall remain outside fenced areas at all times. No excess	Project contractor and Certified Arborist	Prior to issuance of building permits	City of Mountain View Community Development Department Building Division

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
soil, chemicals, debris, equipment, or other materials shall be dumped or stored within the TPZ. ▪ Underground services including utilities, sub-drains, water or sewer shall be routed around the TPZ. Where encroachment cannot be avoided, special construction techniques such as hand digging or tunneling under roots shall be employed where necessary to minimize root injury. Irrigation systems must be designed so that no trenching will occur within the TPZ. ▪ Construction activities associated with structures and underground features to be removed within the TPZ shall use the smallest equipment and operate from outside the TPZ. The consulting arborist shall be on-site during all operations within the TPZ to monitor demolition activity. ▪ All grading, improvement plans, and construction plans shall clearly indicate trees proposed to be removed, altered, or otherwise affected by development construction. The tree information on grading and development plans should indicate the number, size, species, assigned tree number, and location of the dripline of all trees that are to be retained/preserved. All plans shall also include tree preservation guidelines prepared by the consulting arborist. ▪ The demolition contractor shall meet with the consulting arborist before beginning work to discuss work procedures and tree protection. Prior to beginning work, the contractor(s) working in the vicinity of trees to be preserved shall be required to meet with the consulting arborist at the site to review all work procedures, access routes, storage areas, and tree protection measures. ▪ All contractors shall conduct operations in a manner that will prevent damage to trees to be preserved. Any grading, construction, demolition or other work that is expected to encounter tree roots shall be monitored by the consulting arborist. If injury should occur to any tree during construction, it should be evaluated as soon as possible by the consulting arborist so that appropriate treatments can be applied. ▪ Any plan changes affecting trees shall be reviewed by the consulting arborist with regard to tree impacts. These include, but are not limited to, site improvement plans, utility and drainage plans, grading plans, landscape and irrigation plans, and demolition plans. ▪ Trees to be preserved may require pruning to provide construction clearance. All pruning shall be completed by a State of California Licensed Tree Contractor (C61/D49). All pruning			

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
shall be done by Certified Arborist or Certified Tree Worker in accordance with the current Best Management Practices for Pruning published by the International Society of Arboriculture, and adhere to the current editions of the American National Standard for Tree Care Operations (Section Z133.1) and Pruning (Section A300). ▪ Any root pruning required for construction purposes shall receive the prior approval of and be supervised by the consulting arborist. ▪ Any demolition or excavation, such as grading, pad preparation, excavation, and trenching, within the dripline or other work that is expected to encounter tree roots should be approved and monitored by the consulting arborist. Any root pruning required for construction purposes shall receive prior approval of, and by supervised by, the consulting arborist. Roots shall be cut by manually digging a trench and cutting exposed roots with a sharp saw. ▪ Tree(s) to be removed that have branches extending into the canopy of tree(s) to remain must be removed by a qualified arborist and not by construction contractors. The qualified arborist shall remove the tree in a manner that causes no damage to the tree(s) and understory to remain. Tree stumps shall be ground 12 inches below ground surface. ▪ All tree work shall comply with the Migratory Bird Treaty Act as well as California Fish and Game Code Sections 3503 through 3513 to not disturb nesting birds. To the extent feasible, tree pruning, and removal shall be scheduled outside of the breeding season. Breeding bird surveys shall be conducted prior to tree work. Qualified biologists shall be involved in establishing work buffers for active nests. (See Mitigation Measure BIO-1.) ▪ The vertical and horizontal locations of all the trees identified for preservation shall be established and plotted on all plans. These plans shall be forwards to the consulting arborist for review and comment. ▪ Foundations, footings, and pavements on expansive soils near trees shall be designed to withstand differential displacement to protect the soil surrounding the tree roots. ▪ Any liming within 50 feet of any tree shall be prohibited, as lime is toxic to tree roots. Any herbicides placed under paving materials shall be safe for use under trees and labeled for that use.			

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
▪ Brush from pruning and trees removal operations shall be chipped and spread beneath the trees within the TPZ. Mulch shall be between 2 inches and 4 inches in depth and kept at a minimum of 3 feet from the base of the trees. All recommendations for tree preservation made by the applicant's consulting arborist shall be followed.			
Mitigation Measure CUL-1.1: The City shall have Historic American Building Survey Level II documentation completed for the Mountain View Police Services - Fire Administration building and its setting. To ensure public access, the City shall submit copies of the documentation to Mountain View History Center in the Mountain View Library and the California Historical Resources Information System Northwest Information Center. This documentation shall include drawings, photographs, and a historical narrative: ▪ **Drawings:** Existing historic drawings of the historical resource shall be photographed with large-format negatives or photographically reproduced on Mylar. In the absence of existing drawings, full-measured drawings of the building's plan and exterior elevations shall be prepared prior to demolition. ▪ **Photographs:** Photo-documentation of the historical resource shall be prepared to Historic American Building Survey standards for archival photography, prior to demolition. Historic American Building Survey standards require large-format black-and-white photography, with the original negatives having a minimum size of four inches by five inches. Digital photography, roll film, film packs, and electronic manipulation of images are not acceptable. All film prints, a minimum of four inches by five inches, must be hand-processed according to the manufacturer's specifications and printed on fiber-base, single-weight paper and dried to a full gloss finish. A minimum of 12 photographs shall be taken, detailing the site, building exterior, building interior, and character-defining features. Photographs must be identified and labeled using Historic American Building Survey standards. ▪ **Historical Overview:** A professional meeting the Secretary of the Interior's Professional Qualification Standards in Architectural History or History shall assemble historical background information relevant to the historical resource.	City of Mountain View Public Works Department	Prior to issuance of demolition permit	City of Mountain View Community Development Department Building Division

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
The City of Mountain View shall verify compliance with this mitigation measure prior to the initiation of any site or building demolition or construction activities.			
Mitigation Measure CUL-1.2: The City shall incorporate an exhibit or display of the Mountain View Police Services - Fire Administration building and a description of its historical significance into a publicly accessible portion of the proposed Public Safety Building. The display shall be developed with the assistance of one or more professionals experienced in creating such historical exhibits or displays.	City of Mountain View Public Works Department	Prior to issuance of occupancy permit	City of Mountain View Community Development Department Building Division
Mitigation Measure CUL-2: Project supervisors, contractors, and equipment operators shall participate in an Archaeological Resource Awareness Training, conducted by a Secretary of Interior-qualified archaeologist, to become familiar with the type of artifacts and features that could be encountered during project-related ground disturbing activities, as well as the procedures to follow if archaeological resources are unearthed during construction. If indigenous, prehistoric or historic-period cultural materials are unearthed during ground-disturbing activities, all work within 100 feet of the find shall halt until a qualified archaeologist and Native American representative can assess the significance of the find. The City and a qualified archaeologist, defined as one meeting the U.S. Secretary of the Interior's Professional Qualifications Standards for Archaeology, and a Native American representative shall be immediately informed of the discovery. Prehistoric and indigenous materials might include obsidian and chert-flaked stone tools (e.g., projectile points, knives, scrapers) or tool-making debris; culturally darkened soil ["midden"] containing heat-affected rocks and artifacts; stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); and battered-stone tools, such as hammerstones and pitted stones. Historic-period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse. If the find is determined to be potentially significant, the archaeologist, in consultation with the Native American representative, shall develop a treatment plan that could include site avoidance, capping, or data recovery. If avoidance is not feasible, project impacts shall be mitigated in accordance with the recommendations of the archeologist, in coordination with the City, Native American representative, and pursuant to CEQA Guidelines Section 15126.4 (b)(3)(C), which requires implementation of a data recovery plan. Once the recovery plan has been reviewed and approved by the City, implemented, and any appropriate resource recovery completed, project construction activity within the area of the find may resume.	Project contractor and qualified archaeologist	Prior to issuance of first construction permit allowing ground-disturbing activities	City of Mountain View Community Development Department Building Division

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
Mitigation Measure CUL-3: In the event of the discovery of human remains during demolition, excavation, or construction, there shall be no further excavation or disturbance of the site within a 50-foot radius of the location of such discovery, or any nearby area reasonably suspected to overlie adjacent remains, and the area shall be secured to prevent further disturbance. The City and the Santa Clara County Coroner shall be notified and shall make a determination as to whether the remains are Native American. If the Coroner determines that the remains are not subject to their authority, the Coroner shall notify the Native American Heritage Commission within 24 hours, which shall attempt to identify descendants of the deceased Native American. If no satisfactory agreement can be reached as to the disposition of the remains pursuant to this State law, then the landowner, in consultation with a qualified archaeologist, shall formulate an appropriate treatment plan for the find, which might include, but not be limited to, respectful scientific recording and removal, being left in place, removal and reburial on-site, or elsewhere. Associated grave goods are to be treated in the same manner. A final report shall be submitted to the City's Community Development Director prior to release of a Certificate of Occupancy. This report shall contain a description of the mitigation programs and its results, including a description of the monitoring and testing resources analysis methodology and conclusions, and a description of the disposition/curation of the resources. The report shall verify completion of the mitigation program to the satisfaction of the City's Community Development Director.	Project contractor and qualified archaeologist	During construction	City of Mountain View Community Development Department Building Division
Mitigation Measure GEO-1: Prior to the issuance of building permits, the project sponsor shall retain the services of a certified engineering geologist and/or geotechnical engineer to prepare a site-specific geotechnical study based on the most recent draft of the conceptual site plans. The geotechnical study shall address, but is not limited to, the effects of seismically induced liquefaction, and include recommendations to ensure any potential hazards related to the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction would not occur. The geotechnical study shall be approved by the City of Mountain View's Building Inspection Department prior to the issuance of building permits.	Project contractor and certified engineer	Prior to issuance of building permits	City of Mountain View Community Development Department Building Division
Mitigation Measure HAZ-1: Prior to issuance of demolition or grading permits, shallow soil samples and groundwater samples shall be taken in the near surface soil and tested for tetrachloroethylene to determine if contaminants from previous operations on the former Fremont Laundry or Evelyn Avenue parking lot sites are present at concentrations above established regulatory construction worker safety and commercial environmental screening levels. The results of the soil sampling and testing must be provided to the City of Mountain View Community Development Department.	Project contractor and qualified hazardous materials consultant	Prior to issuance of demolition or grading permits	City of Mountain View Community Development Department Building Division

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
If contaminated soils or groundwater are found in concentrations above the appropriate regulatory environmental screening levels for the proposed project, the project sponsor shall obtain regulatory oversight from the Santa Clara County Department of Environmental Health, Department of Toxic Substances Control, or Regional Water Quality Control Board to mitigate the contamination found. A Site Management Plan (SMP), Removal Action Plan (RAP), or equivalent document must be prepared by a qualified hazardous materials consultant. The plan must establish remedial measures and/or soil management practices to ensure construction worker safety and the health of future workers and visitors to the project site during operation of the proposed project. Evidence of regulatory oversight and a regulatory approved plan shall be provided to the City of Mountain View Community Development Department. In the event that vapor encroachment is discovered, the proposed project shall develop a vapor management plan. The vapor management plan shall be prepared in consultation with applicable regulatory agencies, including the Department of Toxic Substances Control and the Regional Water Quality Control Board, and shall be reviewed and accepted by the City of Mountain View prior to the issuance of demolition and grading permits.			
Mitigation Measure NOI-1: The project sponsor shall incorporate the following practices into the construction contract specifications to be implemented by the construction contractor during the entire construction phase of the project. The project sponsor and contractors shall prepare a Construction Noise Control Plan that includes the following measures: ▪ Limit construction to the hours of 8:00 a.m. to 6:00 p.m., Monday through Friday, and between 9:00 a.m. to 5:00 p.m. on weekends. ▪ Construct temporary noise barriers, where feasible, to screen receptors to the west, south, and east from the construction area. Temporary noise barrier fences would provide a 5 dBA noise reduction if the noise barrier interrupts the line-of-sight between the noise source and receptor and if the barrier is constructed in a manner that eliminates any cracks or gaps. ▪ At least 21 days prior to the start of construction activities, property owners within a 500-foot radius of the project site shall be notified of the planned construction. The notification shall include a brief description of the project, a description of the construction phases to occur, the construction hours noted above, and the overall construction duration. The	Project contractor	Prior to issuance of construction permit	City of Mountain View Community Development Department Building Division

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
notification shall include the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. ▪ At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours, as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, they shall investigate, take appropriate corrective action, and report the action to the City. ▪ Prior to the start of construction, the project sponsor shall retain a qualified acoustical consultant to conduct construction noise monitoring during the major phases of project construction at select locations in the surrounding neighborhood. The number and location of monitoring positions, and the construction phases during which monitoring shall occur, shall be determined by City staff in consultation with the acoustical consultant. All sound level meters used during monitoring shall satisfy the American National Standards Institute (ANSI) standard of Type 1 instrumentation. All measurements shall be at least 5 feet above the ground and away from reflective surfaces. The noise monitoring data and results shall be submitted in a memorandum to the City on a weekly basis during the construction phases requiring monitoring, along with comparison to the 80 dBA Leq (8-hr) construction noise limit. If exceedances of the construction noise limit are found, the applicant's construction contractor shall modify construction techniques and equipment to reduce the construction noise below the 80 dBA Leq (8-hr) limit. ▪ Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. The signs shall note that all other equipment shall be turned off if not in use for more than 5 minutes. The construction manager shall be responsible for enforcing these noise reduction requirements. ▪ Construction trucks and equipment shall utilize the best available noise control techniques including improved mufflers, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds, wherever feasible. ▪ The contractor shall use impact tools that are hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.			

Table 1 Mountain View Public Safety Building Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
▪ Stationary noise sources (e.g., generators and air compressors) shall be located as far from sensitive receptors as possible, and they shall be muffled and enclosed within temporary sheds, insulation barriers, or other measures to reduce noise levels to the extent feasible. ▪ Stockpiling of materials shall be located as far as feasible from nearby noise-sensitive receptors. During the entire active construction period, the use of noise-producing signals—including horns, whistles, alarms, and bells—shall be for safety warning purposes only. The construction manager shall require the use of smart back-up alarms on equipment. (These devices automatically adjust the alarm level based on the background noise level.) Alternately, equipment back-up alarms may be turned off and replaced with human spotters in compliance with all safety requirements and laws.			

EXHIBIT C

THE CITY OF MOUNTAIN VIEW'S FINDINGS FOR THE MOUNTAIN VIEW PUBLIC SAFETY BUILDING REQUIRED UNDER THE CALIFORNIA ENVIRONMENTAL QUALITY ACT (Public Resources Code, Section 21000, et seq.)

I INTRODUCTION

The City of Mountain View (the "City") prepared a Draft and a Final Environmental Impact Report (collectively, the "EIR") for the Mountain View Public Safety Building (the "project").

The EIR addresses the potential environmental effects associated with the project. The findings set forth below (the "Findings") are adopted by this City of Mountain View City Council ("City Council") as the City's findings under the California Environmental Quality Act ("CEQA") (Public Resources Code, Section 21000 et seq.), and the CEQA Guidelines (California Code of Regulations, Title 14, Section 15000 et seq.) relating to the project based on substantial evidence in the whole record of this proceeding (administrative record). The Findings provide the written analysis and conclusions of this City Council regarding the project's environmental impacts, mitigation measures, and alternatives to the project.

II GENERAL FINDINGS

Procedural Background

Pursuant to CEQA and the CEQA Guidelines, the City determined that an EIR would be required for the project. On December 10, 2024, the City issued a Notice of Preparation ("NOP") for the EIR, which was circulated to responsible agencies, interested groups, and individuals and to the State Clearinghouse for review and comment. Comments were received by the City during the NOP scoping period, which were taken into account during the preparation of the Draft EIR. A copy of the NOP is included in Appendix A of the *Mountain View Public Safety Building Draft Environmental Impact Report* ("Draft EIR").

The Draft EIR was published for public review and comment on July 1, 2025, and was filed with the State Office of Planning & Research under State Clearinghouse No. 2024120444. The Draft EIR was made available for review and comment by interested persons and public agencies from July 1, 2025, to August 15, 2025.

No comments were received on the Draft EIR during the public review period. The City prepared the *Mountain View Public Safety Building Final Environmental Impact Report* ("Final EIR") with revisions to the Draft EIR and a Mitigation Monitoring and Reporting Program (MMRP). The Final EIR was made available for public review in October 2025.

On November 4, 2025, the City Council will hold a public hearing to consider the project and associated EIR, CEQA Findings of Fact, Statement of Overriding Considerations, and MMRP.

Record of Proceedings and Custodian of Record

The record upon which all findings and determinations related to the approval of the project are based includes the following:

1. The EIR and all documents referenced in or relied upon by the EIR.
2. All information (including written evidence and testimony) provided by City staff to

the City Council relating to the EIR, the approvals, and the project

3. All information (including written evidence and testimony) presented to City Council by environmental consultants who prepared the EIR or incorporated into reports presented to the City Council.
4. All information (including written evidence and testimony) presented to the City from other public agencies related to the project or the EIR.
5. All applications, letters, testimony and presentations relating to the project.
6. All information (including written evidence and testimony) presented at any public City hearing or City workshop related to the project and the EIR.
7. All City-adopted or City-prepared land use plans, ordinances, including without limitation general plans, specific plans, and ordinances, together with environmental review documents, findings, mitigation monitoring programs, and other documents relevant to land use within the area.
8. The Mitigation Monitoring and Reporting Program ("MMRP") for the project.
9. All other documents composing the record pursuant to Public Resources Code section 21167.6(e).

The custodian of the documents and other materials that constitute the record of the proceedings upon which the City's decisions are based is David Printy, Public Works Department, or his designee. Such documents and other material are located at City of Mountain View, Public Works Department, 500 Castro Street, First Floor, Mountain View, CA 94041.

Consideration and Certification of the EIR

In accordance with CEQA, the City Council certifies that the EIR has been completed in compliance with CEQA. The City Council has independently reviewed the record and the EIR prior to certifying the EIR and approving the project. By these findings, the City Council confirms, ratifies, and adopts the findings and conclusions of the EIR as supplemented and modified by these findings. The EIR and these findings represent the independent judgment and analysis of the City and the City Council. The City Council recognizes the EIR may contain clerical errors. The City Council reviewed the entirety of the EIR and bases its determination on the substance of the information it contains. The City Council certifies that the EIR is adequate to support the City's decisions regarding the project.

The City Council certifies that the EIR is adequate to support approval of the project described in the EIR.

No Significant New Information

The City Council recognizes that the Final EIR incorporates information obtained and produced after the Draft EIR was completed, and that the Final EIR contains additions, corrections, and modifications that clarify or amplify the analysis included in the Draft EIR. The City Council has reviewed and considered the Final EIR and all of this information, and it finds that the information added in the Final EIR clarifies and makes insignificant changes to an adequate Draft EIR. The new information added to the EIR does not involve a new significant environmental impact, a substantial increase in the severity of a previously identified significant environmental impact, or a feasible mitigation measure or alternative considerably different from others previously analyzed that the project applicant declines to adopt and that would

clearly lessen the significant environmental impacts of the project. No information indicates that the Draft EIR was inadequate or conclusory or that the public was deprived of a meaningful opportunity to review and comment on the EIR. Therefore, the Final EIR does not include any changes or add any new significant information to the Draft EIR that would require recirculation of the EIR under CEQA.

Mitigation Monitoring And Reporting Program

The mitigation measures set forth in the MMRP are specific and enforceable and are capable of being fully implemented by the efforts of the City of Mountain View and/or other identified public agencies of responsibility. As appropriate, some mitigation measures define performance standards to ensure no significant environmental impacts will result. The MMRP adequately describes implementation procedures and monitoring responsibility in order to ensure that the project complies with necessary mitigation measures.

The City Council will impose conditions of approval and adopt mitigation measures as set forth in the MMRP as enforceable conditions of approval. As discussed in detail in Sections III and IV below, the City has adopted measures to substantially lessen or eliminate all significant effects to the extent feasible.

The conditions of approval and mitigation measures incorporated into and imposed upon the project approval will not themselves have new significant environmental impacts or cause a substantial increase in the severity of a previously identified significant environmental impact that were not analyzed in the EIR. In the event a mitigation measure recommended in the EIR has been inadvertently omitted from the conditions of approval or the MMRP, that mitigation measure is adopted and incorporated from the EIR into the MMRP by reference and adopted as a condition of approval.

Severability

If any term, provision, or portion of these Findings or the application of these Findings to a particular situation is held by a court of competent jurisdiction to be invalid, void or unenforceable, the remaining provisions of these Findings, or their application to other actions related to the project, shall continue in full force and effect unless amended or modified by the City.

III FINDINGS REGARDING SIGNIFICANT AND UNAVOIDABLE IMPACTS

As indicated in the EIR, the project would result in one significant and unavoidable impact that cannot be avoided or reduced to a less-than-significant level through implementation of mitigation measures recommended in the EIR.

Cultural and Tribal Cultural Resources

Impact CUL-1: The proposed project would remove the historical resource on the project site that is eligible for listing in the California Register under Criterion 3 as a significant example of the work of master architect Goodwin Steinberg.

Mitigation Measure CUL-1.1: The City shall have Historic American Building Survey Level II documentation completed for the Mountain View Police Services - Fire Administration building and its setting. To ensure public access, the City shall submit copies of the documentation to Mountain View History Center in the Mountain View Library and the California Historical Resources Information System Northwest Information Center. This documentation shall include drawings, photographs, and a historical narrative:

- **Drawings:** Existing historic drawings of the historical resource shall be photographed with large-format negatives or photographically reproduced on Mylar. In the absence of existing drawings, full-measured drawings of the building's plan and exterior elevations shall be prepared prior to demolition.
- **Photographs:** Photo-documentation of the historical resource shall be prepared to Historic American Building Survey standards for archival photography, prior to demolition. Historic American Building Survey standards require large-format black-and-white photography, with the original negatives having a minimum size of four inches by five inches. Digital photography, roll film, film packs, and electronic manipulation of images are not acceptable. All film prints, a minimum of four inches by five inches, must be hand-processed according to the manufacturer's specifications and printed on fiber-base, single-weight paper and dried to a full gloss finish. A minimum of 12 photographs shall be taken, detailing the site, building exterior, building interior, and character-defining features. Photographs must be identified and labeled using Historic American Building Survey standards.
- **Historical Overview:** A professional meeting the Secretary of the Interior's Professional Qualification Standards in Architectural History or History shall assemble historical background information relevant to the historical resource.

The City of Mountain View shall verify compliance with this mitigation measure prior to the initiation of any site or building demolition or construction activities.

Mitigation Measure CUL-1.2: The City shall incorporate an exhibit or display of the Mountain View Police Services - Fire Administration building and a description of its historical significance into a publicly accessible portion of the proposed Public Safety Building. The display shall be developed with the assistance of one or more professionals experienced in creating such historical exhibits or displays.

Findings

Due to the inherent design of the proposed project, implementation of the proposed project would remove the Mountain View Police Services - Fire Administration building. While Mitigation Measure CUL-1.1 and Mitigation Measure CUL-1.2 would offset this impact to the extent feasible, they would not prevent removal of this historical resource. Therefore, this impact would be significant and unavoidable**.** The City finds that Mitigation Measure CUL-1.1 and Mitigation Measure CUL-1.2 are feasible, and are hereby adopted and incorporated into the project to mitigate significant effects from Impact CUL-1 to the extent feasible, although this impact would remain significant and unavoidable.

IV FINDINGS REGARDING SIGNIFICANT IMPACTS WHICH ARE MITIGATED TO A LESS-THAN-SIGNIFICANT LEVEL

As indicated in the EIR, the project would result in significant impacts that can be avoided or reduced to a less-than-significant level through implementation of mitigation measures recommended in the EIR. By adopting and incorporating these mitigation measures into the project, it is hereby determined that the following significant impacts will be avoided or substantially lessened to a less-than-significant level.

Air Quality

Impact AIR-1: Without mitigation, construction activities for the proposed project could generate fugitive dust that exceeds State standards.

Mitigation Measure AIR-1: The project contractor shall comply with the Bay Area Air District's basic best management practices for reducing construction-related emissions of uncontrolled fugitive dust (coarse inhalable particulate matter [PM_{10}] and fine inhalable particulate matter [$PM_{2.5}$]):

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt trackout onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 mph.
- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measures Title 13, Section 2485, of the California Code of Regulations). Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
- All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph.
- All trucks and equipment, including their tires, shall be washed off prior to leaving the site.
- Unpaved roads providing access to sites located 100 feet or further from a paved road shall be treated with a 6- to 12-inch layer of compacted layer of wood chips, mulch, or gravel.
- Publicly visible signs shall be posted with the telephone number and name of the person to contact at the City regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's General Air Pollution Complaints number shall also be visible to ensure compliance with applicable regulations.

These measures shall be noted on grading plans prepared by the applicant submitted to the City of Mountain View Building Division. The construction contractor shall implement these measures during ground disturbing activities. The City shall verify compliance that these measures have been implemented during normal construction site inspections.

Findings

Mitigation Measure AIR-1 contains the Bay Area Air District's basic best management practices in the bullet points listed above, which are recommended by the Air District to ensure construction fugitive

dust emissions and fine inhalable particulate matter are less than significant. As such, this impact would be reduced to a less-than-significant level with implementation of Mitigation Measure AIR-1. The City finds that Mitigation Measure AIR-1 is feasible and is hereby adopted and incorporated into the project to mitigate significant effects from Impact AIR-1 to a less-than-significant level.

Impact AIR-2: Construction activities for the proposed project could generate cancer risks above acceptable levels for the maximally exposed residential receptor.

Mitigation Measure AIR-2: The City of Mountain View shall specify in the construction bid that the project construction contractor(s) and subcontractor(s) comply with the following requirements for all off-road equipment used over the entire duration of the construction activities at the site:

- Use engines that meet either US EPA or California Air Resources Board (CARB) Tier 4 Final emission standards for engines that are greater than 25 horsepower. Ensure that all construction plans submitted to the City of Mountain View Building Division clearly show the selected emission reduction strategy for construction equipment over 25 horsepower.
- If Tier 4 Final equipment is not available for use for the project for a specific piece of off-road construction equipment, documentation shall be provided to the City of Mountain View demonstrating that such equipment is not available for the project. If Tier 4 Final equipment is not available, the construction contractor(s) and subcontractor(s) affected shall use Tier 4 Interim equipment instead. If Tier 4 Interim equipment is not available for use for the project for a specific piece of off-road construction equipment, documentation shall be provided to the City demonstrating that such equipment is not available for the project. If Tier 4 Interim equipment is not available, the construction contractor(s) and subcontractor(s) affected shall use Tier 3 equipment outfitted with a level 3 diesel particulate filter instead.
- Prohibit the use of generators except for electric alternatives. The City shall ensure that all construction plans submitted to the City of Mountain View Building Division clearly show the requirement to use power storage equipment or electric generators in lieu of fossil fuel powered generators.
- Maintain a list of all operating equipment in use on the project site for verification by the City or their designee. The construction equipment list shall state the makes, models, fuel type, and number of construction equipment on-site. All equipment shall be properly serviced and maintained in accordance with the manufacturer's recommendations.
- Communicate with all sub-contractors in contracts and construction documents that all non-essential idling of construction equipment is restricted to 5 minutes or less in compliance with California Air Resources Board Rule 2449 and is responsible for ensuring that this requirement is met.

Findings

As shown in Table 4.1-7, *Construction Health Risk Assessment Result – Mitigated,* of the EIR, implementation of Mitigation Measure AIR-2 would reduce emissions for sensitive receptors to a less-than-significant level. The City finds that Mitigation Measure AIR-2 is feasible and is hereby adopted and incorporated into the project to mitigate significant effects from Impact AIR-2 to a less-than-significant level.

Biological Resources

Impact BIO-1: Tree removal and demolition activities during site clearance could destroy active nests, and/or otherwise interfere with nesting of birds protected under federal and State law.

Mitigation Measure BIO-1: Nests of raptors and other birds shall be protected when in active use, as required by the federal Migratory Bird Treaty Act and the California Fish and Game Code. The construction contractor shall indicate the following on all construction plans, if construction activities and any required tree removal occur during the breeding season (February 1 and August 31). Preconstruction surveys shall:

- Be conducted by a qualified biologist prior to tree removal or grading, demolition, or construction activities. Note that preconstruction surveys are not required for tree removal or construction, grading, or demolition activities outside the nesting period.
- Be conducted no more than 14 days prior to the start of tree removal or construction.
- Be repeated at 14-day intervals until construction has been initiated in the area after which surveys can be stopped.
- Document locations of active nests containing viable eggs or young birds.

Protective measures for active nests containing viable eggs or young birds shall be implemented under the direction of the qualified biologist until the nests no longer contain eggs or young birds. Protective measures shall include:

- Establishment of clearly delineated exclusion zones (i.e., demarcated by identifiable fencing, such as orange construction fencing or equivalent) around each nest location as determined by the qualified biologist, taking into account the species of birds nesting, their tolerance for disturbance and proximity to existing development. In general, exclusion zones shall be a minimum of 300 feet for raptors and 75 feet for passerines and other birds.
- Monitoring active nests within an exclusion zone on a weekly basis throughout the nesting season to identify signs of disturbance and confirm nesting status.
- An increase in the radius of an exclusion zone by the qualified biologist if project activities are determined to be adversely affecting the nesting birds. Exclusion zones may be reduced by the qualified biologist only in consultation with California Department of Fish and Wildlife.
- The protection measures shall remain in effect until the young have left the nest and are foraging independently or the nest is no longer active.

Findings

Mitigation Measure BIO-1 requires a qualified biologist to conduct a preconstruction survey for nesting birds, followed by avoidance efforts if nests are found. The survey, as well as any subsequent protective measures, would ensure that project implementation would avoid any significant impact on nesting birds that may be on the project site at the time of tree removal or demolition activities. The City finds that Mitigation Measure BIO-1 is feasible and is hereby adopted and incorporated into the project to mitigate significant effects from Impact BIO-1 to a less-than-significant level.

Impact BIO-2: The proposed development would result in removal of trees protected under City's Municipal Code.

Mitigation Measure BIO-2: The proposed project shall comply with the City of Mountain View's Municipal Code requirements for the provision of the removal of heritage trees in Chapter 32, Trees, Shrubs and Plants, Article II, Protection of The Urban Forest. A tree removal permit shall be obtained for the removal of any "heritage" tree, and replacement plantings shall be provided as approved by the City. If permitted, any replacement trees be placed off-site or an appropriate in-lieu tree replacement fee may be paid to the City of Mountain View as compensation for "heritage" trees removed by the proposed project, where sufficient land area is not available on-site for adequate replacement and when approved by the City.

In addition, a Tree Protection and Replacement Program (Program) shall be developed by a Certified Arborist prior to project approval and implemented during project construction to provide for adequate protection and replacement of "heritage" trees, as defined by the City's Municipal Code. The Program shall include, but is not limited to, the following provisions:

- Adequate measures shall be defined to protect all trees to be preserved. These measures should include the establishment of a tree protection zone (TPZ) around each tree to be preserved, in which no disturbance is permitted. For design purposes, the TPZ shall be located at the dripline of the tree or 10 feet, whichever is greater. If necessary, the TPZ for construction-tolerant species (i.e., coast live oaks) may be reduced to 7 feet.
- Temporary construction fencing shall be installed at the perimeter of TPZs prior to demolition, grubbing, or grading. Fences shall be 6-foot chain link or equivalent, as approved by the City of Mountain View. Fences shall remain until all construction is completed. Fences shall not be relocated or removed without permission from the consulting arborist.
- No grading, excavation, or storage of materials shall be permitted within TPZs. Construction trailers, traffic, and storage areas shall remain outside fenced areas at all times. No excess soil, chemicals, debris, equipment, or other materials shall be dumped or stored within the TPZ.
- Underground services including utilities, sub-drains, water or sewer shall be routed around the TPZ. Where encroachment cannot be avoided, special construction techniques such as hand digging or tunneling under roots shall be employed where necessary to minimize root injury. Irrigation systems must be designed so that no trenching will occur within the TPZ.
- Construction activities associated with structures and underground features to be removed within the TPZ shall use the smallest equipment and operate from outside the TPZ. The consulting arborist shall be on-site during all operations within the TPZ to monitor demolition activity.
- All grading, improvement plans, and construction plans shall clearly indicate trees proposed to be removed, altered, or otherwise affected by development construction. The tree information on grading and development plans should indicate the number, size, species, assigned tree number, and location of the dripline of all trees that are to be retained/preserved. All plans shall also include tree preservation guidelines prepared by the consulting arborist.
- The demolition contractor shall meet with the consulting arborist before beginning work to discuss work procedures and tree protection. Prior to beginning work, the contractor(s) working in the

vicinity of trees to be preserved shall be required to meet with the consulting arborist at the site to review all work procedures, access routes, storage areas, and tree protection measures.

- All contractors shall conduct operations in a manner that will prevent damage to trees to be preserved. Any grading, construction, demolition or other work that is expected to encounter tree roots shall be monitored by the consulting arborist. If injury should occur to any tree during construction, it should be evaluated as soon as possible by the consulting arborist so that appropriate treatments can be applied.
- Any plan changes affecting trees shall be reviewed by the consulting arborist with regard to tree impacts. These include, but are not limited to, site improvement plans, utility and drainage plans, grading plans, landscape and irrigation plans, and demolition plans.
- Trees to be preserved may require pruning to provide construction clearance. All pruning shall be completed by a State of California Licensed Tree Contractor (C61/D49). All pruning shall be done by Certified Arborist or Certified Tree Worker in accordance with the current Best Management Practices for Pruning published by the International Society of Arboriculture, and adhere to the current editions of the American National Standard for Tree Care Operations (Section Z133.1) and Pruning (Section A300).
- Any root pruning required for construction purposes shall receive the prior approval of and be supervised by the consulting arborist.
- Any demolition or excavation, such as grading, pad preparation, excavation, and trenching, within the dripline or other work that is expected to encounter tree roots should be approved and monitored by the consulting arborist. Any root pruning required for construction purposes shall receive prior approval of, and by supervised by, the consulting arborist. Roots shall be cut by manually digging a trench and cutting exposed roots with a sharp saw.
- Tree(s) to be removed that have branches extending into the canopy of tree(s) to remain must be removed by a qualified arborist and not by construction contractors. The qualified arborist shall remove the tree in a manner that causes no damage to the tree(s) and understory to remain. Tree stumps shall be ground 12 inches below ground surface.
- All tree work shall comply with the Migratory Bird Treaty Act as well as California Fish and Game Code Sections 3503 through 3513 to not disturb nesting birds. To the extent feasible, tree pruning, and removal shall be scheduled outside of the breeding season. Breeding bird surveys shall be conducted prior to tree work. Qualified biologists shall be involved in establishing work buffers for active nests. (See Mitigation Measure BIO-1.)
- The vertical and horizontal locations of all the trees identified for preservation shall be established and plotted on all plans. These plans shall be forwards to the consulting arborist for review and comment.
- Foundations, footings, and pavements on expansive soils near trees shall be designed to withstand differential displacement to protect the soil surrounding the tree roots.
- Any liming within 50 feet of any tree shall be prohibited, as lime is toxic to tree roots. Any herbicides placed under paving materials shall be safe for use under trees and labeled for that use.

- Brush from pruning and trees removal operations shall be chipped and spread beneath the trees within the TPZ. Mulch shall be between 2 inches and 4 inches in depth and kept at a minimum of 3 feet from the base of the trees.
- All recommendations for tree preservation made by the applicant's consulting arborist shall be followed.

Findings

Mitigation Measure BIO-2 requires development and adherence to a Tree Protection and Replacement Program. The program would ensure the replacement of heritage trees and the implementation of a number of tree protection measures during project construction. The program, and its protective measures, would reduce this impact to a less-than-significant level. The City finds that Mitigation Measure BIO-2 is feasible and is hereby adopted and incorporated into the project to mitigate significant effects from Impact BIO-2 to a less-than-significant level.

Cultural and Tribal Cultural Resources

Impact CUL-2: Construction activities for the proposed project have the potential to cause a substantial adverse change in the significance of an archaeological resource pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15064.5.

Mitigation Measure CUL-2: Project supervisors, contractors, and equipment operators shall participate in an Archaeological Resource Awareness Training, conducted by a Secretary of Interior-qualified archaeologist, to become familiar with the type of artifacts and features that could be encountered during project-related ground disturbing activities, as well as the procedures to follow if archaeological resources are unearthed during construction. If indigenous, prehistoric or historic-period cultural materials are unearthed during ground-disturbing activities, all work within 100 feet of the find shall halt until a qualified archaeologist and Native American representative can assess the significance of the find. The City and a qualified archaeologist, defined as one meeting the U.S. Secretary of the Interior's Professional Qualifications Standards for Archaeology, and a Native American representative shall be immediately informed of the discovery. Prehistoric and indigenous materials might include obsidian and chert-flaked stone tools (e.g., projectile points, knives, scrapers) or tool-making debris; culturally darkened soil ["midden"] containing heat-affected rocks and artifacts; stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); and battered-stone tools, such as hammerstones and pitted stones. Historic-period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse. If the find is determined to be potentially significant, the archaeologist, in consultation with the Native American representative, shall develop a treatment plan that could include site avoidance, capping, or data recovery. If avoidance is not feasible, project impacts shall be mitigated in accordance with the recommendations of the archeologist, in coordination with the City, Native American representative, and pursuant to CEQA Guidelines Section 15126.4 (b)(3)(C), which requires implementation of a data recovery plan. Once the recovery plan has been reviewed and approved by the City, implemented, and any appropriate resource recovery completed, project construction activity within the area of the find may resume.

Findings

Mitigation Measure CUL-2 requires appropriate procedures to minimize potential impacts to previously undiscovered archaeological resources during ground-disturbing activities; as such, impacts to

archaeological resources would be reduced to less-than-significant levels. The City finds that Mitigation Measure CUL-2 is feasible and is hereby adopted and incorporated into the project to mitigate significant effects from Impact CUL-2 to a less-than-significant level.

Impact CUL-3: Construction activities for the proposed project have the potential to result in unanticipated discovery of human remains interred outside of dedicated cemeteries.

Mitigation Measure CUL-3: In the event of the discovery of human remains during demolition, excavation, or construction, there shall be no further excavation or disturbance of the site within a 50-foot radius of the location of such discovery, or any nearby area reasonably suspected to overlie adjacent remains, and the area shall be secured to prevent further disturbance. The City and the Santa Clara County Coroner shall be notified and shall make a determination as to whether the remains are Native American. If the Coroner determines that the remains are not subject to their authority, the Coroner shall notify the Native American Heritage Commission within 24 hours, which shall attempt to identify descendants of the deceased Native American. If no satisfactory agreement can be reached as to the disposition of the remains pursuant to this State law, then the landowner, in consultation with a qualified archaeologist, shall formulate an appropriate treatment plan for the find, which might include, but not be limited to, respectful scientific recording and removal, being left in place, removal and reburial on-site, or elsewhere. Associated grave goods are to be treated in the same manner. A final report shall be submitted to the City's Community Development Director prior to release of a Certificate of Occupancy. This report shall contain a description of the mitigation programs and its results, including a description of the monitoring and testing resources analysis methodology and conclusions, and a description of the disposition/curation of the resources. The report shall verify completion of the mitigation program to the satisfaction of the City's Community Development Director.

Findings

Mitigation Measure CUL-3 requires appropriate procedures to be followed in the event that human remains are discovered during construction activities; as such, impacts to human remains would be reduced to less-than-significant levels. The City finds that Mitigation Measure CUL-3 is feasible and is hereby adopted and incorporated into the project to mitigate significant effects from Impact CUL-3 to a less-than-significant level.

Impact CUL-4: Construction activities for the proposed project have the potential to cause a significant impact to an unknown tribal cultural resource as defined in Public Resources Code 21074.

Mitigation Measure CUL-4: Implement Mitigation Measures CUL-2 and CUL-3.

Findings

Mitigation Measure CUL-4 requires implementation of Mitigation Measures CUL-2 and CUL-3, which require appropriate procedures to be followed in the event that previously undiscovered archaeological resources and human remains are discovered during construction activities; as such, impacts to tribal cultural resources would be reduced to less-than-significant levels. The City finds that Mitigation Measures CUL-2 and CUL-3 is feasible and is hereby adopted and incorporated into the project to mitigate significant effects from Impact CUL-4 to a less-than-significant level.

Geology and Soils

Impact GEO-1: The construction activities, increased site occupancy, and development of new structures under the proposed project could exacerbate an existing hazard associated with liquefaction due to seismic events.

Mitigation Measure GEO-1: Prior to the issuance of building permits, the project sponsor shall retain the services of a certified engineering geologist and/or geotechnical engineer to prepare a site-specific geotechnical study based on the most recent draft of the conceptual site plans. The geotechnical study shall address, but is not limited to, the effects of seismically induced liquefaction, and include recommendations to ensure any potential hazards related to the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction would not occur. The geotechnical study shall be approved by the City of Mountain View's Building Inspection Department prior to the issuance of building permits.

Findings

Mitigation Measure GEO-1 requires the development of a site-specific geotechnical study to be approved the City's Building Inspection Department prior to the issuance of building permits. With adherence to the final design-level geotechnical report, the proposed building would be constructed in a way that eliminates significant effects associated with seismically induced liquefaction. The City finds that Mitigation Measures GEO-1 is feasible and is hereby adopted and incorporated into the project to mitigate significant effects from Impact GEO-1 to a less-than-significant level.

Impact GEO-2 The construction activities, development, and increased site occupancy involved in the proposed project could exacerbate an existing hazard associated with unstable soils due to seismically induced liquefaction.

Mitigation Measure GEO-2: Implement Mitigation Measure GEO-1.

Findings

Mitigation Measure GEO-2 requires implementation of Mitigation Measure GEO-1, which requires a site-specific geotechnical study to be approved the City's Building Inspection Department prior to the issuance of building permits; as such, the proposed building would be constructed in a way that eliminates significant effects associated with unstable soils due to seismically induced liquefaction. The City finds that Mitigation Measures GEO-1 and is hereby adopted and incorporated into the project to mitigate significant effects from Impact GEO-2 to a less-than-significant level.

Hazards and Hazardous Materials

Impact HAZ-1: The proposed project could create a hazard to future site occupants due to the release of hazardous materials originating from off-site land uses.

Mitigation Measure HAZ-1: Prior to issuance of demolition or grading permits, shallow soil samples and groundwater samples shall be taken in the near surface soil and tested for tetrachloroethylene to determine if contaminants from previous operations on the former Fremont Laundry or Evelyn Avenue parking lot sites are present at concentrations above established regulatory construction worker safety and commercial environmental screening levels. The results of the soil sampling and testing must be provided to the City of Mountain View Community Development Department.

If contaminated soils or groundwater are found in concentrations above the appropriate regulatory environmental screening levels for the proposed project, the project sponsor shall obtain regulatory oversight from the Santa Clara County Department of Environmental Health, Department of Toxic Substances Control, or Regional Water Quality Control Board to mitigate the contamination found. A Site Management Plan (SMP), Removal Action Plan (RAP), or equivalent document must be prepared by a qualified hazardous materials consultant. The plan must establish remedial measures and/or soil management practices to ensure construction worker safety and the health of future workers and visitors to the project site during operation of the proposed project. Evidence of regulatory oversight and a regulatory approved plan shall be provided to the City of Mountain View Community Development Department.

In the event that vapor encroachment is discovered, the proposed project shall develop a vapor management plan. The vapor management plan shall be prepared in consultation with applicable regulatory agencies, including the Department of Toxic Substances Control and the Regional Water Quality Control Board, and shall be reviewed and accepted by the City of Mountain View prior to the issuance of demolition and grading permits.

Findings

Mitigation Measure HAZ-1 requires site testing and appropriate agency oversight and management in the event that concentrations exceed environmental screening levels. With agency oversight, remedial measures, and management practices, potential hazards would be reduced to a less-than-significant level. The City finds that Mitigation Measures HAZ-1 is feasible and is hereby adopted and incorporated into the project to mitigate significant effects from Impact HAZ-1 to a less-than-significant level.

Noise

Impact NOI-1: The proposed project would generate a substantial temporary increase in ambient noise levels during construction.

Mitigation Measure NOI-1: The project sponsor shall incorporate the following practices into the construction contract specifications to be implemented by the construction contractor during the entire construction phase of the project. The project sponsor and contractors shall prepare a Construction Noise Control Plan that includes the following measures:

- Limit construction to the hours of 8:00 a.m. to 6:00 p.m., Monday through Friday, and between 9:00 a.m. to 5:00 p.m. on weekends.
- Construct temporary noise barriers, where feasible, to screen receptors to the west, south, and east from the construction area. Temporary noise barrier fences would provide a 5 dBA noise reduction if the noise barrier interrupts the line-of-sight between the noise source and receptor and if the barrier is constructed in a manner that eliminates any cracks or gaps.
- At least 21 days prior to the start of construction activities, property owners within a 500-foot radius of the project site shall be notified of the planned construction. The notification shall include a brief description of the project, a description of the construction phases to occur, the construction hours noted above, and the overall construction duration. The notification shall include the telephone

numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint.

- At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours, as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, they shall investigate, take appropriate corrective action, and report the action to the City.
- Prior to the start of construction, the project sponsor shall retain a qualified acoustical consultant to conduct construction noise monitoring during the major phases of project construction at select locations in the surrounding neighborhood. The number and location of monitoring positions, and the construction phases during which monitoring shall occur, shall be determined by City staff in consultation with the acoustical consultant. All sound level meters used during monitoring shall satisfy the American National Standards Institute (ANSI) standard of Type 1 instrumentation. All measurements shall be at least 5 feet above the ground and away from reflective surfaces. The noise monitoring data and results shall be submitted in a memorandum to the City on a weekly basis during the construction phases requiring monitoring, along with comparison to the 80 dBA Leq (8-hr) construction noise limit. If exceedances of the construction noise limit are found, the applicant's construction contractor shall modify construction techniques and equipment to reduce the construction noise below the 80 dBA Leq (8-hr) limit.
- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. The signs shall note that all other equipment shall be turned off if not in use for more than 5 minutes. The construction manager shall be responsible for enforcing these noise reduction requirements.
- Construction trucks and equipment shall utilize the best available noise control techniques including improved mufflers, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds, wherever feasible.
- The contractor shall use impact tools that are hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.
- Stationary noise sources (e.g., generators and air compressors) shall be located as far from sensitive receptors as possible, and they shall be muffled and enclosed within temporary sheds, insulation barriers, or other measures to reduce noise levels to the extent feasible.
- Stockpiling of materials shall be located as far as feasible from nearby noise-sensitive receptors.
- During the entire active construction period, the use of noise-producing signals—including horns, whistles, alarms, and bells—shall be for safety warning purposes only. The construction manager shall require the use of smart back-up alarms on equipment. (These devices automatically adjust the alarm level based on the background noise level.) Alternately, equipment back-up alarms may be turned off and replaced with human spotters in compliance with all safety requirements and laws.

Findings

With implementation of Mitigation Measure NOI-1, particularly the use of equipment silencers and mufflers, construction noise would not represent a substantial increase over ambient noise levels at surrounding noise sensitive uses. Therefore, with implementation of Mitigation Measure NOI-1, his impact would be less than significant. The City finds that Mitigation Measures NOI-1 is feasible and is hereby adopted and incorporated into the project to mitigate significant effects from Impact NOI-1 to a less-than-significant level.

V FINDINGS REGARDING SIGNIFICANT IRREVERSIBLE CHANGES

Section 21100(b)(2)(B) of CEQA requires that an EIR identify any significant effect on the environment that would be irreversible if the project were implemented. Section 15126.2(c) of the CEQA Guidelines identifies irreversible environmental changes as those involving a large commitment of nonrenewable resources, secondary impacts that would commit future generations, or irreversible damage resulting from environmental accidents.

The project's significant and irreversible changes are discussed in the Draft EIR beginning at page 6-4. The Draft EIR explains that, based on the analysis in Chapter 4 of the Draft EIR, the project would not result in land use changes that would commit future generations, or result in irreversible damage from environmental accidents. In addition, although the construction and operation of the proposed redevelopment project would involve the use of nonrenewable resources, through the inclusion of energy-conserving project features and compliance with applicable standards and regulations, the Draft EIR finds that the proposed project would not represent a large commitment of nonrenewable resources.

VI FINDINGS REGARDING GROWTH-INDUCING IMPACTS

Section 15126.2(d) of the CEQA Guidelines states that an EIR should discuss "…the ways in which the project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment." Growth can be induced in a number of ways, including through elimination of obstacles to growth, through the stimulation of economic activity within the region, or through precedent-setting action.

The project's potential growth-inducing impacts are discussed in the Draft EIR beginning at page 6-5. The Draft EIR explains that the proposed project would replace the existing Mountain View Police Services - Fire Administration building with a new Public Safety Building with the same local community-serving use and purpose for the residents of Mountain View. Accordingly, the construction and operation of the project would not directly or indirectly induce growth.

VII PROJECT ALTERNATIVES

Background - Legal Requirements

CEQA requires that EIRs assess feasible alternatives or mitigation measures that may substantially lessen the significant effects of projects prior to approval (Public Resources Code Section 21002). With the exception of the "no project" alternative, the specific alternatives or types of alternatives that must be assessed are not specified. CEQA "establishes no categorical legal imperative as to the scope of alternatives to be analyzed in an EIR. Each case must be evaluated on its own facts, which in turn must be reviewed in light of the statutory purpose (Citizens of Goleta Valley v. Board of Supervisors (1990) 52

Cal.3d. 553, 556). The legislative purpose of CEQA is to protect public health, welfare and the environment from significant impacts associated with all types of development, by ensuring that agencies regulate activities so that major consideration is given to preventing environmental damage while providing a decent home and satisfying living environment for every Californian (Public Resources Code Section 21000). In short, the objective of CEQA is to avoid or mitigate environmental damage associated with development.

Identification of Project Objectives

The CEQA Guidelines state that the "range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic purposes of the project and could avoid or substantially lessen one of more of the significant effects" of the project (CEQA Guidelines Section 15126(d)(2)). Thus, an evaluation of the project objectives is key to determining which alternatives should be assessed in the EIR.

The project's objectives include the following:

- **General Plan Consistency.** Provide for the development of the site consistent with City's General Plan.
- **Enhance Public Safety Infrastructure.** Construct a modern, state-of-the-art Public Safety Building that meets the operational needs of the Mountain View Police Department (MVPD) and other public safety personnel.
- **Improve Operational Efficiency.** Provide upgraded facilities, including offices, an auditorium, sleep quarters, lockers, and fitness areas, to enhance the functionality and efficiency of police and fire department operations.
- **Increase Parking Capacity.** Develop a three-story parking garage and reconfigure surface parking to accommodate approximately 244 parking spaces, improving access for personnel and visitors.
- **Enhance Site Access and Circulation.** Improve vehicular and pedestrian access with designated secured and public entry points from Oak Street and Franklin Street while maintaining connectivity to major transportation routes.
- **Preserve Flexibility for Future City Uses.** Reserve 0.6 acres of the project site for potential future municipal development to accommodate evolving community needs.
- **Site Reuse.** Utilize the site that currently houses the Mountain View Police Services - Fire Administration building at 1000 Villa Street due to its central location and parcel size that allows for the size and mix of facilities envisioned for the proposed project.

Alternatives Analyzed in EIR:

The CEQA Guidelines state that the "range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic purposes of the project and could avoid or substantially lessen one or more of the significant effects" of the project. The EIR analyzed two alternatives, examining the environmental impacts and feasibility of each alternative, as well as the ability of the alternatives to meet project objectives summarized above. Each of the alternatives are described in detail starting on page 5-4 of the Draft EIR. Summaries of the alternatives are provided below, and a brief discussion of the Environmentally Superior Alternative follows the summaries of the

alternatives. The findings in this Section are based on the EIR, the discussion and analysis of which are hereby incorporated in full by this reference.

Alternative A: No Project Alternative

Under the No Project Alternative, the proposed project would not be approved. No development activities would occur on the project site, which would remain in its existing condition. The project site is currently occupied by the Mountain View Police Services - Fire Administration building; a 42-stall public parking lot; a 110-stall, restricted-access parking lot' a pump station; and a K-9 training area. Under this alternative, these facilities would remain on the project site, and no changes in the use or occupancy of the project site would occur. Unlike under the proposed project, under the No Project Alternative environmental health staff would not be relocated to the project site.

Findings

Alternative A: No Project Alternative would result in similar impacts related to GHG emissions and transportation. All other impacts (air quality, biological resources, cultural and tribal cultural resources, geology and soils, hazards and hazardous materials, and noise) would be reduced when compared to the proposed project.

The No Project Alternative would meet the objective to be consistent with the General Plan. It would partially meet the objective to reuse the project site because it would utilize the project site but would not allow for the size and mix of facilities envisioned for the proposed project. The No Project Alternative would not meet any additional project objectives.

The City finds Alternative A infeasible as it would fail to meet nearly all of the project objectives.

Alternative B: Historic Preservation Alternative

Under the Historic Preservation Alternative, the existing, 44,914-square-foot building would not be demolished and the proposed project would occur within the existing Mountain View Police Services - Fire Administration building. This alternative assumes that the existing parking garage would be reconfigured and/or expanded, or that new structured parking would be built, to accommodate the increased parking supply included in the proposed project. While parking areas would be reconfigured or expanded to accommodate more vehicles, the overall site access would not be changed.

Because the building size would not increase from existing conditions, it is assumed that this alternative would include interior renovations to upgrade existing facilities but would not include any notable expansions to existing facilities, amenities, or offices for Mountain View Police Department staff. In addition, unlike under the proposed project, under this alternative environmental health staff would not be relocated to the proposed project.

Findings

Alternative B: Historic Preservation Alternative would result in reduced impacts related to air quality and cultural and tribal cultural resources. All other impacts (biological resources, geology and soils, GHG emissions, hazards and hazardous materials, noise, and transportation) would be similar when compared to the proposed project.

The Historic Preservation Alternative would meet or partially meet most of the project objectives because it would be consistent with the General Plan, allow for some on-site enhancements (through interior renovations), increase the project site's parking supply, and be located on the project site. The

Historic Preservation Alternative would not provide a state-of-the art building, fully meet operational needs and efficiencies, enhance site access, provide an on-site reserve area for future City use, or allow for the size and mix of facilities envisioned for the proposed project.

The City finds Alternative B infeasible as it would not meet the operational needs of the proposed project or allow for the size and mix of facilities envisioned for the proposed project.

Environmentally Superior Alternative

Findings

As shown in Table 5-1, *Comparison of Project Alternative Impacts*, of the Draft EIR, the No Project Alternative would reduce impacts for nearly all environmental topics (six out of eight) when compared to the proposed project. The next environmentally superior alternative would be the Historic Preservation Alternative, which would reduce impacts for two topic areas.

VIII INCORPORATION BY REFERENCE

These findings incorporate the text of the EIR for the project, including the Mitigation Monitoring Program in the Final EIR, City staff reports relating to the project and other documents relating to public hearings on the project, by reference, in their entirety. Without limitation, this incorporation is intended to elaborate on the scope and nature of mitigation measures, project and cumulative impacts, the basis for determining the significance of impacts, the comparison of the alternatives to the project, the determination of the environmentally superior alternative, and the reasons for approving the project.

EXHIBIT D

STATEMENT OF OVERRIDING CONSIDERATIONS

The City Council of the City of Mountain View adopts and makes the following Statement of Overriding Considerations regarding the significant, unavoidable impacts of the Mountain View Public Safety Building ("project") and the anticipated benefits of the proposed project.

GENERAL

CEQA requires decision-makers to balance the economic, legal, social, technological, or other benefits of a proposed project against its unavoidable impacts when determining whether to approve the project. If the specific benefits of a project outweigh the unavoidable adverse environmental effects, those effects may be considered acceptable, and the agency must state the specific reasons to support the action in a "statement of overriding considerations" supported by substantial evidence in the record (CEQA Guidelines Section 15903, Statement of Overriding Considerations). Pursuant to CEQA Guidelines Section 15093, the City Council must adopt a Statement of Overriding Considerations for the significant and unavoidable impacts of the proposed project in connection with approval of the proposed project. The City Council finds that, even with mitigation, implementation of the project carries with it significant and unavoidable environmental effects, as identified in the EIR and summarized below.

Approval of the proposed project would result in the following significant and unavoidable impact:

Impact CUL-1: The proposed project would remove the historical resource on the project site that is eligible for listing in the California Register under Criterion 3 as a significant example of the work of master architect Goodwin Steinberg.

OVERRIDING CONSIDERATIONS

The City Council has carefully considered the proposed project's significant and unavoidable project impact in reaching its decision to approve the project. Even with mitigation, the City Council recognizes that implementation of the proposed project could carry with it unavoidable adverse environmental effects, as identified in the Draft and Final Environmental Impact Report (collectively, the "EIR").

The City Council specifically finds that, to the extent that the identified significant adverse impact for the proposed project have not been reduced to acceptable levels through feasible mitigation or alternatives, there are specific economic, legal, social, technological, or other benefits that outweigh the project's significant unavoidable impact and support approval of the proposed project. Any one of these benefits, as set forth below, is sufficient to justify approval of the proposed project. The substantial evidence supporting the various benefits is in the record as a whole.

The following statements identify the reasons why, in the City's judgment, specific benefits of the proposed project outweigh the possibility of the significant and unavoidable effect. The City finds that each of the proposed project benefits discussed below is a separate and independent basis for these findings. The reasons set forth below are based on the EIR and other information in the administrative record.

EXHIBIT D
STATEMENT OF OVERRIDING CONSIDERATIONS

Economic Benefits

1. The project would provide critical services for local shops, businesses, and services.

Social Benefits

2. The project would provide critical services for local households and visitors.
3. The project would provide facilities that enhance the functionality and efficiency of police and fire department operations.

Technological Benefits

4. The project would construct a modern, state-of-the art Public Safety Building.

Environmental Benefits

5. The project would enhance site access and circulation, providing secure public pedestrian access points and maintaining connectivity to major transportation routes.
6. The project would reuse the project site in a central location.
7. The project would be designed as an all-electric building and would not utilize any natural gas.
